

REGULATIONS AND SYLLABUS

(University Department)

(For the candidates admitted from the academic year 2022-2023 onwards)

MASTER OF SCIENCE IN

ENERGY SCIENCE

(Under Choice Based Credit System)

DEPARTMENT OF ENERGY SCIENCE AND TECHNOLOGY
SCHOOL OF ENERGY AND ENVIRONMENTAL SCIENCES

PERIYARUNIVERSITY

(NAAC A⁺⁺ Grade –State University-NIRF Rank 63, ARIIA Rank 10)

SALEM-636011

TAMILNADU

Regulations & Scheme

M.Sc., Energy Science

Choice Based Credit System (CBCS) Regulation,
Scheme and Syllabus
(W.e.f.2022-2023 onwards)

1. Eligibility for Admission

Candidate who has passed the B.Sc./B.Voc degree in **Physics/ Chemistry/ Energy / Electronics/ Biotechnology/ Biochemistry/ Mathematics/ Nano Science** of this University or any other University shall be eligible for admission to M.Sc. Energy Science degree of this University

2. Mode of Selection

The admission is subject to the prevailing rules and regulations for PG admission of this University and also as per the norms of Tamil Nadu Government.

3. Duration of the Course

The duration of the M.Sc. degree shall be two years consist of four semesters. Each semester consists of 90 working days.

4. Distribution of Credit Points

The minimum credit requirement for M.Sc., degree shall be 94 Credits. The break-up of credits for the Programme is as follows;

❖ Core Courses	: 69 credits
❖ Elective Courses	: 16 credits
❖ Supportive Courses	: 04 credits
❖ Human Rights	: 02 credits
❖ Technical Seminar	: 01 credit
❖ Swayam	: 02 credits

5. Course of Study

The course of study for the M.Sc, degree shall be in Energy Science (CBCS) with internal assessment according to syllabi prescribed from time to time.

5.1 Components of Internal Examination

The allotment of marks and scheme of examination as follows;

Internal Tests (Best 1 out of 2)	05 Marks
Model Examination	05 Marks
Seminar	05 Marks
Assignment	05 Marks
Attendance	05 Marks
Total	25 Marks

5.2 Theory Core Paper

External	75 Marks
Internal	25 Marks
Total	100 Marks

5.3 Practical Internal & External (100 Marks)

Internal (40 Marks)		External (60 Marks)		
Internal Tests (Best 1 out of 2)	Model	Record Work	Experimental Work	Viva Voce
20	20	10	40	10

5.4 Technical Seminar (100 Marks)

Technical Seminar aims to help students acquire the employability skills necessary for the workplace through technical presentation. It also attempts to meet the expectations of the employers by giving special attention to presentation skills and soft skills. This will be attained through expert guidance and teaching activities focusing on the above listed skills and language skills.

Internal (40 Marks)			External (60 Marks)		
Presentation I	Presentation II	Presentation III	Dissertation	Presentation	Viva Voce
10	10	20	20	30	10

5.5 Marks allotment for attendance as follows

Percentage of attendance	Marks
96% - 100%	5
91% - 95%	4
86% - 90%	3
81% - 85%	2
75% - 80%	1
Below 75%	No marks

6. Details of Project Marks

Project work	Internal (40 Marks)			External (60 marks)			
	Phase I (100 Marks)	Review I	Review II	Review III	Thesis Evaluation (External)	Viva –Voce 45 Marks	
10		10	20	15		Supervisor	External
					15	15	15

Project work	Internal (80 Marks)				External (120 marks)			
Phase II (200 Marks)	Review I	Review II	Review III	Conference Paper Presentation/ Journal Article/ Book Chapter Publication /Patent Filing	Thesis Evaluation (External)	Viva –Voce 90 Marks		
	20	20	30			10	30	Supervisor
						30	30	30

The project work is an important component of postgraduate programme. The Project work consists of Phase – I and Phase – II. The Phase – I is to be undertaken during III semester and Phase – II which is a continuation of Phase – I is to be undertaken during IV semester.

The Project work for Phase II shall be pursued for a minimum of 90 days during the final semester. Students may be permitted to carried out project work either internal or external mode (i.e., Industrial / Research Organization, etc.,) on the recommendations of the Head of the Department. In case of external Project, a supervisor of the department shall guide the Project work jointly with an expert member as joint supervisor from the Industry/ Organization. The student shall be instructed to meet the supervisor periodically and attend the review committee meetings for evaluating the progress.

7. Question Paper Pattern

Time: 3 Hours

Maximum Marks: 75

PART – A (20X1= 20 Marks)

Objective Type Questions

PART – B (3X5= 15 Marks)

Analytical Questions Any 3 out of 5 (One question from each Unit)

PART – C (5X8= 40 Marks)

Either or Type descriptive questions (Two questions from each Unit)

8. Passing Minimum

1. There shall be no Passing Minimum Marks for Internal.
2. For External Examination, Passing Minimum shall be of 50% (Fifty Percentage) of the maximum marks prescribed for the paper.
3. In aggregate (External +Internal) the passing minimum shall be of 50% for each Paper/Practical/Project and Viva-voce.
4. Grading shall be based on overall marks obtained (Internal + External).

9. Classification of Successful Candidate

CGPA	Grade	Classification of final result
9.5-10.0	O+	First Class with Exemplary
9.0 and above but below 9.5	O	
8.5 and above but below 9.0	D++	First Class with Distinction
8.0 and above but below 8.5	D+	
7.5 and above but below 8.0	D	
7.0 and above but below 7.5	A++	First Class
6.5 and above but below 7.0	A+	
6.0 and above but below 6.5	A	
5.5 and above but below 6.0	B+	Second Class
5.0 and above but below 5.5	B	
0.0 and above but below 5.0	U	Re-appear

10. Marks and Grades

Range of Marks	Grade points	Letter Grade	Description
90 – 100	9.0 – 10.0	O	Outstanding
80-89	8.0 – 8.9	D+	Excellent
75-79	7.5 – 7.9	D	Distinction
70-74	7.0 – 7.4	A+	Very Good
60-69	6.0 – 6.9	A	Good
50-59	5.0 – 5.9	B	Average
00-49	0.0	U	Re-Appear
Absent	0.0	AAA	Absent

11. Internship

The students may undergo internship training at Research organization / University/ industry for a period as specified in the curriculum during summer vacation. In this case the training has to be undergone continuously for the entire period.

Duration of Internship	Credits
2 Weeks to 4 weeks	2

At the end of internship, the student shall submit a report. A three-member committee constituted by the Head of the Department will conduct the Viva-Voce Examination. The committee comprises of one expert from an industry/institutions and two members (Coordinator and supervisor) from the Department.

INTERNSHIP TRAINING (100 Marks)

Report	Presentation		Viva Voce		Total
External	External	Internal	External	Internal	
40	15	15	15	15	100

12. Supportive Paper

Supportive paper should be offered in second semester. Students are expected to select one Supportive Course (Non-major elective) offered by other departments. Students can earn four credits from supportive course.

13. Swayam Course

The student must attend a SWAYAM course mandatorily in first semester with two credits. The student is eligible for the award of Degree only if he gets pass in Swayam course.

SWAYAM is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. The objective of this effort is to take the best teaching learning resources to all, including the most disadvantaged. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy.

The courses hosted on SWAYAM are in 4 quadrants – (1) video lecture, (2) specially prepared reading material that can be downloaded/printed (3) self-assessment tests through tests and quizzes and (4) an online discussion forum for clearing the doubts. Steps have been taken to enrich the learning experience by using audio-video and multi-media and state of the art pedagogy / technology.

In order to ensure that best quality content is produced and delivered, nine National Coordinators conduct the exam. They are:

1. AICTE (All India Council for Technical Education) for self-paced and international courses
2. NPTEL (National Programme on Technology Enhanced Learning) for Engineering
3. UGC (University Grants Commission) for non-technical post-graduation education
4. CEC (Consortium for Educational Communication) for under-graduate education
5. NCERT (National Council of Educational Research and Training) for school education
6. NIOS (National Institute of Open Schooling) for school education
7. IGNOU (Indira Gandhi National Open University) for out-of-school students
8. IIMB (Indian Institute of Management, Bangalore) for management studies
9. NITTTR (National Institute of Technical Teachers Training and Research) for Teacher Training programme

Courses delivered through SWAYAM are available free of cost to the learners, however learners wanting a SWAYAM certificate should register for the final proctored

exams that come at a fee and attend in-person at designated centres on specified dates. Eligibility for the certificate will be announced on the course page and learners will get certificates only if this criterion is matched. Universities/colleges approving credit transfer for these courses can use the marks/certificate obtained in these courses for the same.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):

The Energy Science program seeks to prepare PG students for productive and rewarding careers in the Energy arena. The PEOs are listed below

- I. Acquire knowledge and accomplish a decent employment in energy sector and advance to significant positions of leadership in their Profession.
- II. Inclination towards advanced research for mitigating the shortcomings in energy systems.
- III. Ascending as an energy consultant for providing solutions towards improving the efficacy of energy systems.
- IV. Become a successful entrepreneur and be a part of a supply chain or manufacture or market energy products for sustainable development.
- V. Lead an ethical life by engaging in lifelong learning experiences for developing environmentally benign and economically affordable energy products for societal upliftment

PROGRAMME OUTCOMES (POs):

After studying Energy Science, our students will exhibit ability to:

PO	Graduate Attribute	Programme Outcome
1	Knowledge	Apply knowledge of mathematics, basic science and engineering science.
2	Problem analysis	Identify, formulate and solve engineering problems.
3	Design/development of solutions	Design a system or process to improve its performance, satisfying its constraints.
4	Conduct investigations of complex problems	Conduct experiments & collect, analyze and interpret the data.
5	Modern tool usage	Apply various tools and techniques to improve the efficiency of the system.
6	The Scientist and society	Conduct them to uphold the professional and social obligations.
7	Environment and sustainability	Design the system with environment consciousness and sustainable development.
8	Ethics	Interact in industry, business and society in a professional and ethical manner.
9	Individual and team	Function in a multidisciplinary team.
10	Communication	Proficiency in oral and written Communication.
11	Project management and finance	Implement cost effective and improved system.
12	Life-long learning	Continue professional development and learning as a life-long activity.

PROGRAM SPECIFIC OUTCOMES (PSOs):

1. To create awareness on the energy sourcing, generation, distribution, consumption, and emission patterns of India Vs Globe, apart from computation of plant load factor, efficiency, quantification of emissions along with cost of power generation from various energy sources
2. To carry out energy audit in Industries by accounting its energy consumption pattern, determining its specific energy consumption, diagnosing the causes for deviation from the industry benchmarks and suggestions for improving the performance of the plant
3. To instill ability to use knowledge in various domains to identify research gaps and ideate innovations by simulation of energy systems using software such as MATLAB, ANSYS- CFD, Fluent, TRNSYS, PV-SYST

22UPEST1C01	ENERGY SCENARIO, AUDIT AND MANAGEMENT	L	T	P	C
		3	1	0	4

COURSE OBJECTIVES

- To know Global and Indian Energy Scenario and Energy Conservation Act
- To know the procedure of Energy Audit
- To understand the material and energy balance in the production
- To Know the demand side management analysis
- To know the planning and targeting of energy in industries

UNIT – I: ENERGY SCENARIO AND MANAGEMENT

An overview of Indian Energy Scenario, Sector wise Energy Consumption in India, Energy needs of Growing Economy, Long Term Energy Scenario for India. Reasons to save energy (both financial and environmental), Energy Conservation and its importance, Energy Conservation Act and related policies, Bureau of Energy Efficiency (BEE) Regulations. Need to Manage Energy, Definition and objectives of Energy Management, Components of Energy Management program and their explanation.

UNIT – II: ENERGY AUDIT

Energy audit concepts, Scope of energy audit, types of energy audit, general procedure for a detailed energy audit, various energy audit methodologies, instruments and metering for energy audit, general procedure for a detailed energy audit, preparation of detailed energy audit report, benefits of energy audit.

UNIT– III: UTILITY RATE STRUCTURES AND FINANCIAL ANALYSIS

Understanding Energy Costs, Innovative rates – Time – of - Use rates, Real Time Pricing Rates, Financial Incentive Rates, Energy Purchase Rates. Basic concept of Economic Analysis – Interest rate, Inflation rate, Single Payment, Uniform – Series Payment. Economic Evaluation Methods – Net Present Worth, Rate of Return, Benefit – Cost Ratio, Payback period. Comparison of Various Economic Evaluation Methods

UNIT- IV: DEMAND SIDE MANAGEMENT

Introduction to Demand Side Management, Integrated Resource Planning Concepts, Relation between Demand Side Management and Integrated Resource Planning, Demand Side Management Programs, Cost Benefit Analysis of Demand Side Management.

UNIT- V: PROJECT MANAGEMENT, ENERGY MONITORING AND TARGETING

Project Planning Techniques - Implementation Plan for Top Management - Planning Budget - Procurement Procedures – Construction - Measurement and Verification - Setting up Monitoring & Targeting - Key elements of Monitoring & Targeting System - Data and Information Sources - Data and Information Analysis - Energy Management Information System (EMIS)

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Adopt energy standards based on various acts officially established for qualitative and quantitative improvement in energy utilization	K1-K6
CO2	Familiarized about energy auditing and energy management methods.	K1-K6
CO3	Find the production rate and energy consumption data	K1-K6

CO4	Analyse the cost benefits of demand side management	K1-K6
CO5	Involve in energy extraction and efficiency rate improvement	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1C02	BASICS OF FLUID MECHANICS AND HEAT TRANSFER	L 3	T 1	P 0	C 4
--------------------	--	---------------	---------------	---------------	---------------

COURSE OBJECTIVES

- To introduce the students about properties of the fluids, behavior of fluids under static conditions
- To impart basic knowledge of the dynamics of fluids
- To explain the incompressible and compressible fluid flow concepts
- To understand the mechanisms of heat transfer under steady and transient conditions.
- To learn the thermal analysis and sizing of heat exchangers and to understand the basic concepts of mass transfer

UNIT - I : PROPERTIES OF FLUIDS

Introduction – Density – Specific Weight – Specific Volume – Specific Gravity – Viscosity – Kinematic Viscosity - Dynamic Viscosity - Compressibility and Bulk Modulus-Surface Tension and Capillarity

UNIT – II: PRESSURE MEASURING DEVICES

Pascal's law – Absolute gauge – Atmospheric and vacuum pressures –manometers – simple manometer – piezometer –U tube manometer- single column manometer-differential manometer- U tube differential manometer –inverted U tube differential manometer

UNIT–III: FLUID FLOW AND LOSSES

Types of flows- Rate of Flow (Or) Discharge- Continuity Equation- Euler's Equation of Motion Bernoulli's Equation from Euler's Equation –Application Of Bernoulli's Equation- Venture Orifice Meter - Pitot-Tube

UNIT- IV: CONDUCTION AND CONVECTION

General Differential equation of Heat Conduction– Cartesian and Polar Coordinates – One Dimensional Steady State Heat Conduction - free and Forced Convection – Hydrodynamic and Thermal Boundary Layer. Free and Forced Convection during external flow over Plates and Cylinders and Internal flow through tubes

UNIT – V: RADIATION AND HEAT EXCHANGERS

Black Body Radiation – Grey body radiation – Shape Factor – Electrical Analogy – Radiation Shields. Radiation through gases- Heat exchanger – ϵ – NTU - approach and design procedure – compact heat exchanger.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Understand the difference between solid and fluid, its properties and behaviour in static conditions.	K1-K6
CO2	Understand the concepts of flow governing equations	K1-K6
CO3	Estimate losses in pipelines for both laminar and turbulent conditions and analysis of pipes connected in series and parallel.	K1-K6
CO4	Explain basic laws for radiation and apply these principles to radiative heat transfer between different types of surfaces to solve problems	K1-K6
CO5	Explain the phenomena and apply LMTD and NTU methods of thermal analysis to different types of heat exchanger configurations and solve problems	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1C03

BASICS OF THERMODYNAMICS

L	T	P	C
3	1	0	4

COURSE OBJECTIVES

- To apply concepts of thermodynamics and Zeroth Law in solving numerical problems with relevant units.
- To analyze and evaluate different forms work, heat and other properties by applying 2nd Law of thermodynamics.
- To understand entropy concepts in thermodynamics.
- To explain pure substance with various diagrams, explain with sketches different calorimeters and to solve numerical problems using steam tables or fundamental equations.
- To apply ideal and real gases laws in solving related numerical problems for various conditions.

UNIT – I: INTRODUCTION AND BASIC CONCEPTS

Thermodynamics and Energy - Importance of Dimensions and Units - Systems and Control Volumes - Properties of a System - Density and Specific Gravity - State and Equilibrium - Processes and Cycles - Temperature and the Zeroth Law of Thermodynamics – Pressure - The Manometer - The Barometer and Atmospheric Pressure.

UNIT – II: ENERGY CONVERSION AND GENERAL ENERGY ANALYSIS

Forms of Energy - Energy Transfer by Heat - Energy Transfer by Work - Energy Transfer by Work - The First Law of Thermodynamics - Energy Conversion Efficiencies - Energy and Environment- Energy Analysis of Steady-Flow Systems - Some Steady - Flow Engineering Devices - The Second Law of Thermodynamics

UNIT–III: ENTROPY

Entropy - The Increase of Entropy Principle - Entropy Change of Pure Substance - Isentropic Processes - Property Diagrams Involving Entropy - Entropy Change of Liquids and Solids - The Entropy Change of Ideal Gases - Reversible Steady-Flow Work- Minimizing the Compressor Work - Entropy Balance.

UNIT – IV: EXERGY

Exergy: Work Potential of Energy - Reversible Work and Irreversibility - Second-Law Efficiency - Exergy Change of a System - Exergy Transfer by Heat, Work, and Mass - The Decrease of Exergy Principle and Exergy Destruction Exergy Destruction - Exergy Balance: Closed Systems- Exergy Balance: Control Volumes.

UNIT – V: THERMODYNAMIC PROPERTY RELATIONS

The Maxwell Relations - The Clapeyron Equation - General Relation - The Joule-Thomson Coefficient- Enthalpy Changes of Real Gases - Internal Energy Changes of Real Gases - Entropy Changes of Real Gases.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Know the thermodynamics laws and their applications.	K1-K6
CO2	Apply concepts of thermodynamics and Zeroth Law in solving numerical problems with relevant units.	K1-K6
CO3	Analyze of a system's thermal energy per unit temperature that is unavailable for doing useful work.	K1-K6

CO4	Illustrate problem solving procedure related to pure substances using PT, PV, TH diagrams.	K1-K6
CO5	Apply ideal and real gases laws in solving related numerical problems for various conditions.	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

APPLIED MATHEMATICS FOR ENERGY

L	T	P	C
3	1	0	4

COURSE OBJECTIVES

- To make students understand with the first-order ODES
- To solving of homogeneous and non-homogeneous linear ODE problem with applications
- To explain the numerical analysis of solving of a partial differential equation
- To provide the details of dimensional and model analysis with applications
- To impart the knowledge of about conformal mapping with different applications

UNIT – I: FIRST- ORDER ODES

First-Order ODEs – Basic Concepts- Modeling -Concept of Solution -Separable ODEs. Modeling- Examples -Heating an Office Building -Leaking Tank. Outflow of Water Through a Hole -Extended Method: Reduction to Separable Form.

UNIT – II: LINEAR ODES

Linear ODEs. Bernoulli Equation. - Homogeneous Linear ODE.-Non-Homogeneous Linear ODE.-First-Order ODE, General Solution, Initial Value Problem-Electric Circuit-Reduction to Linear Form. Bernoulli Equation.

UNIT–III: A PARTIAL DIFFERENTIAL EQUATION (PDE)

Basic Concepts of PDEs- -Important Second-Order PDEs-Physical Assumptions-Modeling: Vibrating String, Wave Equation - Solution by Separating Variables. Two ODEs from the Wave Equation- Satisfying the Boundary Conditions -Solution of the Entire Problem Fourier Series-D’Alembert’s Solution of the Wave Equation. Characteristics

UNIT – IV: DIMENSIONAL AND MODEL ANALYSIS

Heat Flow from a Body in Space -Physical Assumptions -Heat Equation -Solution by Fourier series. Steady Two-Dimensional Heat Problems. Dirichlet Problem -Sinusoidal Initial Temperature -“Triangular” Initial Temperature in a Bar-Modeling Very Long Bars. Solution by Fourier Integrals and Transforms

UNIT – V: CONFORMAL MAPPING AND POTENTIAL THEORY

Conformal Mapping- Geometry of Analytic Functions: Conformal Mapping- Complex Analysis and Potential Theory- Electrostatic Fields-Use of Conformal Mapping. Modeling-Heat Problems- Temperature Between Parallel Plates-Temperature Distribution Between a Wire and a Cylinder-A Mixed Boundary Value Problem-Fluid Flow-Flow Around a Corner-Flow Around a Cylinder.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Providing knowledge about basics of first-order ODES	K1-K6
CO2	To understand Linear ODEs and nonlinear equation	K1-K6
CO3	Imparting theoretical knowledge about boundary problem	K1-K6
CO4	Students will gain deeper understanding of the Fourier series by mastering the theory of heat boundary value problems with various applications.	K1-K6
CO5	Students will gain practical knowledge of conformal mapping with fluid and heat problem	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1C05**ENERGY LABORATORY**

L	T	P	C
0	0	4	2

COURSE OBJECTIVES

- To gain practical knowledge on thermal energy Storage system using various PCM.
- To obtain the knowledge on working and characterization of Solar PV cell.
- To analyze the solar cell efficiency through solar cell simulator.
- To acquire the principle operation of biogas plant and analyze its constituents.
- To learn the working of Solar Hot Water heater.
- To characterize the properties of fuel.
- To assess the performance of Wind Energy Generator.
- To identify the concept of heat transfer in heat exchangers.
- To attain the methodology adopted for performance evaluation of various Energy Auditing devices

LIST OF EXPERIMENTS

1. Evaluation of heat loss and efficiency in thermosyphonic mode of heat flow at different radiation level in Solar Flat Plate Water Heating System.
2. Conduct an experiment to obtain I-V and P-V characteristics of PV module with varying radiation level using solar PV training & research System.
3. Performance analyses of PV module with various tilt angle using solar PV training & research System.
4. Effect of shading on the efficiency of PV module with regards to voltage current and power using Solar PV Training & research system.
5. Performance assessment of Wind Energy Generator based on wind velocity.
6. Determination of the flash point of a given sample using flash point apparatus.
7. Experiment on Nano Floating Drum Biogas Plant and evaluating the percentage of biogas formed for the given amount of organic waste using bio gas analyzer.
8. Experimental evaluation of a Paraffin wax as Phase Change Material for Thermal Energy Storage in TES Training System.
9. Experimental evaluation of a fatty acid as Phase Change Material for Thermal Energy Storage in TES Training System.
10. Experimental evaluation of a Paraffin wax and fatty acid (mixed) as Phase Change Material for Thermal Energy Storage during charging mode in TES Training System.
11. Experimental evaluation of a Paraffin wax and fatty acid (mixed) as Phase Change Material for Thermal Energy Storage during discharging mode in TES Training System.
12. Determination the overall heat transfer coefficient in a plate type heat exchanger at different hot fluid flow rate.
13. Experimental analysis on efficiency of solar cell under varying light intensity using Solar Simulator-SS50 AAA.
14. A study experiment on tools used in the assessment of illuminance (lux meter), wind speed (anemometer), pH level (pH indicator), Humidity (humidity sensor), Temperature (K-Type Thermocouple), sound level (sound meter).

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Understand the working of solar hot water heater and calculate the thermal efficiency of the system.	K1-K6
CO2	Operate solar PV devices under different operating parameter and evaluate their	K1-K6

	performance	
CO3	Investigate the performance of Wind Energy Generator	K1-K6
CO4	Evaluate the thermal properties of various fuel	K1-K6
CO5	Examine thermal heat storage systems and determine the performance of various PCM materials	K1-K6
CO6	Handle solar simulator and assess solar cell performance	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

TECHNICAL SEMINAR

L T P C
0 0 2 1

COURSE OBJECTIVES

This course aims to help students acquire the employability skills necessary for the workplace through technical presentation. It also attempts to meet the expectations of the employers by giving special attention to presentation skills and soft skills. This aim will be achieved through expert guidance and teaching activities focusing on the above listed skills and language skills.

SEMINAR EVALUATION

Internal (40 Marks)			External (60 Marks)

10	10	20	20	30	10

	L	T	P	C
22UPEST1C07				
THERMAL ENERGY CONSERVATION	3	1	0	4

COURSE OBJECTIVES

- To learn the classification of energy
- To know the process of the thermal energy
- To understand the operation of furnaces HVAC and boiler
- To know the importance of cogeneration in industrial utilities
- To know the process of heat recovery system and heat exchangers

UNIT – I: ENERGY CLASSIFICATION

Energy Classification, Principle fuels for energy conversion: Fossil fuels, nuclear fuels, conventional & Non-conventional energy sources : prospecting, extraction and resource assessment and their peculiar characteristics. Direct use of primary energy sources, conversion of primary into secondary energy sources such as Electricity, Hydrogen, And Nuclear energy etc. Energy conversion through fission and fusion, Nuclear power generation

UNIT – II: THERMAL AND MECHANICAL ENERGY

Production of Thermal energy using fossil fuels, Bio-mass and solar energy Production of Mechanical energy using thermal energy, electric energy (electric motors) Turbines: Steam turbines, Hydraulic turbines and wind turbines.

UNIT-III: THERMAL ENERGY UTILITY SYSTEMS

HVAC, Refrigeration and Air conditioning: Vapor compression refrigeration cycle, refrigerants, coefficient of performance, capacity, Factors affecting refrigeration and air conditioning system performance, Vapor absorption refrigeration systems: Working principle, type and comparison with vapor compression system. Boilers Types, combustion in boilers , performance evaluation, analysis of losses, feed water treatment, blow down. Steam systems: Properties of steam, assessment of steam distribution losses, steam leakages, steam trapping, condensate and flash steam recovery system.

UNIT-IV: COGENERATION

Cogeneration: Definition, need, application, advantages, classification, saving potentials Waste heat recovery: Concept of conversion efficiency, energy waste, waste heat recovery classification, advantages and applications, commercially viable waste heat recovery devices

UNIT – V: WASTE HEAT RECOVERY AND HEAT EXCHANGERS

Introduction - Classification and Application - Benefits of waste Heat Recovery - Development of a Waste Heat Recovery - Commercial Waste Heat Recovery Devices Heat Transfer Basics - Concept of Heat Exchanger - Pinch Analysis and pinch technology Application for process and Energy efficiency Improvements

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	To know the classification of energy from different sources	K1-K6
CO2	Evaluate the performance of fuel and biomass under different operating conditions	K1-K6
CO3	Know the Boiler, Steam and energy efficiency opportunities in steam systems	K1-K6
CO4	Know the classification and working of different cogeneration system	K1-K6

CO5	Know the design of different waste heat recovery and heat exchangers.	K1-K6
-----	---	-------

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1C08	ELECTRICAL ENERGY CONSERVATION	L	T	P	C
		3	1	0	4

COURSE OBJECTIVES

- To learn the basics of electrical energy conversion
- To learn electrical transmission and distribution system and Electrical motors
- To understand the operation of pumps selection of pumps and fans based on application
- To obtain knowledge on working of air system
- To know the energy conservation in lighting system

UNIT – I: ELECTRICAL ENERGY

Importance of Electrical energy in modern industrial society - Electricity generation using renewable energy sources : Basic principles and applications. (Conversion of electromagnetic energy and natural energy sources like solar radiation, wind, ocean waves solid waste to electricity) Conversion of chemical energy into electric energy (fuel cell) Thermal power plant, nuclear power plants and hydroelectric power plant, Transmission and distribution of electricity

UNIT – II: ELECTRIC ENERGY SYSTEMS

Transmission and distribution losses, pilferage, Transformer losses. Electricity Tariff , load management and maximum demand control, power factor improvement and its benefits, selection and location of capacitors etc. Electric motors: Types, losses in induction motors, motor efficiency, factors affecting motor performance rewinding and motor replacement issues , Energy efficient motors

UNIT – III: PUMPING SYSTEM

Pumps and pumping systems: Types, performance evaluation, efficient system operation, flow of control strategies, variable speed drives. Cooling towers: : Types, performance evaluation, efficient system operation, flow of control strategies, assessment of saving opportunities

UNIT– IV: COMPRESSED AIR SYSTEM, FANS AND BLOWERS

Compressed air system: Types of air compressors, compressor efficiency, efficient compressor operations, compressed air system components, capacity assessment, and leakage test, factors affecting the performance. Fans and blowers: Types, performance evaluation, efficient system operation, flow of control strategies

UNIT- V: LIGHTING SYSTEM

Basic Parameters and Terms in Lighting System - Light Source and Lamp Types - General Energy Saving Opportunities - Energy Efficient Lighting Controls

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	To know the electrical energy generation processs	K1-K6
CO2	Evaluate the efficiency and losses in electrical system	K1-K6
CO3	Determine the performance fans, blowers and pumping system and understand the parameters and terminologies used	K1-K6
CO4	Adopt the compressed air system based on application with energy conservation	K1-K6
CO5	Familiarized about the use of HVAC and refrigeration system	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1C09

BASICS OF COMPUTATIONAL FLUID DYNAMICS

L	T	P	C
3	1	0	4

COURSE OBJECTIVES

- Developing mathematical models for Boundary Value Problems and their numerical solution.
- Applying concepts of Finite Element Analysis to solve one dimensional problem.
- Determining field variables for two dimensional scalar variable problems.
- Determining field variables for two dimensional vector variable problems.
- Applying the need for isoparametric transformation and the use of numerical integration

UNIT – I: INTRODUCTION

Historical Background – Mathematical Modeling of field problems in Engineering – Governing Equations – Discrete and continuous models – Boundary, Initial and Eigen Value problems– Weighted Residual Methods – Variational Formulation of Boundary Value Problems – Ritz Technique – Basic concepts of the Finite Element Method.

UNIT – II: ONE-DIMENSIONAL PROBLEMS

One Dimensional Second Order Equations – Discretization – Element types- Linear and Higher order Elements – Derivation of Shape functions and Stiffness matrices and force vectors-Assembly of Matrices - Solution of problems from solid mechanics including thermal stresses-heat transfer. Natural frequencies of longitudinal vibration and mode shapes. Fourth Order Beam Equation Transverse deflections and Transverse Natural frequencies of beams.

UNIT–III: TWO DIMENSIONAL SCALAR VARIABLE PROBLEMS

Second Order 2D Equations involving Scalar Variable Functions – Variational formulation – Finite Element formulation – Triangular elements and Quadrilateral elements- Shape functions and element matrices and vectors. Application to Field Problems - Thermal problems – Torsion of Non circular shafts.

UNIT-IV: TWO DIMENSIONAL VECTOR VARIABLE PROBLEMS

Equations of elasticity – Plane stress, plane strain and axisymmetric problems – Constitutive matrices and Strain displacement matrices – Stiffness matrix – Stress calculations - Plate and shell elements.

UNIT – V: ISOPARAMETRIC FORMULATION AND ADVANCED TOPICS

Natural co-ordinate systems – Isoparametric elements – Shape functions for isoparametric elements – One and two dimensions – Serendipity elements – Numerical integration - Matrix solution techniques – Solutions Techniques to Dynamic problems – Introduction to Analysis Software- Introduction to Non Linearity.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Build up mathematical models for Boundary Value Problems and their numerical solution	K1-K6
CO2	Relate concepts of Finite Element Analysis to resolve one dimensional problems	K1-K6
CO3	Conclude field variables for two dimensional scalar variable problems	K1-K6
CO4	Establish field variables for two dimensional vector variable problems	K1-K6
CO5	Appropriate the need for Isoparametric transformation and the use of numerical integration	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

**RESEARCH METHODOLOGY AND
INTELLECTUAL PROPERTY RIGHTS**

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- Identify an appropriate research problem in their interesting domain
- Understand ethical issues and the Preparation of a research project thesis report.
- Understand significance, effective technical writing and report
- Understand the law of patent and copyrights
- Understand the adequate knowledge on patent and rights

UNIT – I: RESEARCH: A WAY OF THINKING

Meaning of research – characteristics and requirements - Types of research - an eight-step model - formulating a research problem - planning a research study - conceptualizing a research design - constructing an instrument for data collection - selecting a sample - writing a research proposal - conducting a research study - collecting data - processing and displaying data - writing a research report

UNIT – II: LITERATURE REVIEW

Bringing clarity and focus to your research problem – Searching for the existing literature - Reviewing the selected literature - Developing a theoretical framework - Developing a conceptual framework

UNIT– III: TECHNICAL WRITING /EVALUATION

Developing an outline - Writing about a variable - Writing about a variable - Writing a bibliography – evaluation - Types of evaluation - Types of evaluation

UNIT- IV: INTRODUCTION TO INTELLECTUAL PROPERTY RIGHTS (IPR)

Concept of Property vis-à-vis Intellectual Property - Meaning, Relevance, Business Impact, Protection of Intellectual Property - Intellectual Property as an Instrument of Development; Need for Protecting - Intellectual Property – Policy Consideration – National and International - intellectual Property Rights as Human Right – Copyrights – Trademarks

UNIT – V: PATENTS

Patents - Indian Patent Law - The Patents Act, 1970 - Patentable Subject Matter - Patentability Criteria - Duration of Patents- Law and Policy Consideration - Procedure for Filing of Patent Application and types of Applications - Procedure for Opposition - Ownership and Maintenance of Patents - Patent Agent- Qualification and Registration Procedure

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Understand the characteristics, objects of a good research problem	K1-K6
CO2	Understand the principles of ethics and ethical issues in science and engineering	K1-K6
CO3	Understand writing a research report as per format.	K1-K6
CO4	Ability to understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity	K1-K6
CO5	Ability to understand about IPR and filing patents in R &D	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPSOC2H01	FUNDAMENTALS OF HUMAN RIGHTS	L	T	P	C
		4	0	0	4

UNIT – I: INTRODUCTION

Meaning and Definitions of Human Rights – Characteristics and Importance of Human Rights – Evolution of Human Rights – Formation, Structure and Functions of the UNO - Universal Declaration of Human Rights – International Covenants – Violations of Human Rights in the Contemporary Era.

UNIT – II: HUMAN RIGHTS IN INDIA

Development of Human Rights in India – Constituent Assembly and Indian Constitution – Fundamental Rights and its Classification – Directive Principles of State Policy – Fundamental Duties

UNIT–III: RIGHTS OF MARGINALIZED AND OTHER DISADVANTAGED PEOPLE

Rights of Women – Rights of Children – Rights of Differently Abled – Rights of Elderly - Rights of Scheduled Castes – Rights of Scheduled Tribes – Rights of Minorities – – Rights of Prisoners – Rights of Persons Living with HIVAIDS – Rights of LGBT.

UNIT-IV: HUMAN RIGHTS MOVEMENTS

Peasant Movements (Tebhaga and Telangana) – Scheduled Caste Movements (Mahar and Ad-Dharmi) – Scheduled Tribes Movements (Santhal and Munda) – Environmental Movements (Chipko and Narmada Bachao Andolan) – Social Reform Movements (Vaikom and Self Respect).

UNIT – V: REDRESSAL MECHANISMS

Protection of Human Rights Act, 1993 (Amendment 2019) – Structure and Functions of National and State Human Rights Commissions – National Commission for SCs – National Commission for STs – National Commission for Women – National Commission for Minorities – Characteristics and Objectives of Human Rights Education.

22UPEST1C11

**COMPUTER AIDED DESIGN AND SIMULATION
LABORATORY**

L	T	P	C
0	0	4	2

COURSE OBJECTIVES

- To know the basics of drawing
- To gain practical experience in handling 2D design and drafting.
- To provide a platform to learn and get familiar with computational analysis
- To learn the simulation and analysis software for solving of flow with heat transfer related problems
- To understand the boundary conditions for various problems

LIST OF EXPERIMENTS

1. Creation of simple block using polar, relative and absolute coordinate methods
2. Creation of rectangle using polar, relative and absolute coordinate methods
3. Isometric views creation of cone
4. Isometric views creation of cylinder
5. Isometric views creation of hexagonal prism
6. Isometric views creation of pentagonal prism
7. Isometric views creation of title block
8. Computational Analysis of One-Dimensional Steady State Heat Diffusion with And Without Sources
9. Computational Analysis of Two-Dimensional Steady State Heat Diffusion with Different Boundary Condition
10. Computational Analysis of Laminar Flow Through A Pipe
11. Computational Analysis of Turbulent Flow Through A Pipe
12. Computational Analysis of Mixing of Hot and Cold Fluid Through A Pipe

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Understand the different types of views projection views	K1-K6
CO2	Two dimensional surface creation with isometric views.	K1-K6
CO3	Use modern engineering software tools to analyze the flow with heat transfer related problems	K1-K6
CO4	Analyze the various parameters influencing the performance of thermodynamic systems	K1-K6
CO5	Learn modelling and measurement tools to solve flow problems related to heat transfer	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1C12	HYDROGEN STORAGE SYSTEM	L	T	P	C
		4	0	0	4

COURSE OBJECTIVES

- To foundational knowledge of properties energy and related fields.
- To make the students acquire an understanding the power fuel cells automobiles
- To help them understand the broad outline of hydrogen energy and driving renewable energy .
- To understand the large-scale hydrogen production.
- To understand the hydrogen storage processes and technologies

UNIT – I :INTRODUCTION OF HYDROGEN ENERGY

Introduction -History of Hydrogen- Summary-Hydrogen Sources - Hydrogen Isotopes- Uses for Hydrogen- Zeppelins and Airships- Hydrogen Energy - Pros and Cons of Hydrogen Energy - Manufacture of Hydrogen

UNIT – II :HYDROGEN-POWERED FUEL CELL AND HYBRID AUTOMOBILES

Introduction-Fuel Cells-Hydrogen Fuel Cell Applications -Near-Future Hydrogen-Driven Cars and Industry Milestones-European Hydrogen and Fuel Cell Projects- Hydrogen Transportation Concepts by Geographic Region- Energy and Global Warming -Hydrogen for the Future - A High Price- Looking Ahead -The Dawn of Hydrogen as the Future of Fuel Cells

UNIT– III : HYDROGEN: DRIVING RENEWABLE ENERGY

Introduction -Hydrogen as an Energy Carrier-Hydrogen Energy Storage- Hydrogen Production - Hydrogen Re-Electrification - Pipelines and Underground Hydrogen Storage -Materials-Based Hydrogen Storage - Technical Targets and Status -Industrial Application of Hydrogen Energy - Electrical Energy Storage-Characteristics of Electricity -Electricity and the Roles of Electrical Energy Storage-Strategic Asset Management of Power Networks-Orchestrating Infrastructure for Sustainable Smart Cities -Smart Technology Solutions Create Value-New

UNIT- IV : LARGE-SCALE HYDROGEN PRODUCTION

Large-Scale Hydrogen Production- Introduction -Hydrogen Production by Steam Reforming of Hydrocarbons- Steam Reforming Technologies -Heat of Combustion -Reforming Reactions- Introduction to Combustion- Chemical Combustion -Combustion Equations -Mass and Mole Fractions -Enthalpy of Formation-7.8 Enthalpy of Combustion -Adiabatic Flame Temperature

UNIT – V : HYDROGEN STORAGE PROCESSES AND TECHNOLOGIES

Introduction -Hydrogen Storage Technologies -How Does Hydrogen Storage Work? -Physical Hydrogen Storage -Research and Development Goals -Materials-Based Hydrogen Storage - Technical Targets and Status -Onboard Hydrogen Storage for Light-Duty Vehicles-Material Handling Equipment-Portable Power Equipment-High-Density Hydrogen Storage Challenges

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Learn about the background on hydrogen and their properties.	K1-K6
CO2	Gain knowledge about power fuel cells automobiles	K1-K6
CO3	Understand the hydrogen energy and driving renewable energy and the impact on environment	K1-K6
CO4	Apply their learned knowledge to develop hydrogen storage processes and technologies	K1-K6
CO5	Design hydrogen production for various energy applications	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4₃Analyze, K5- evaluate and K6- Create

22UPEST1C13	NANOMATERIALS FOR ENERGY APPLICATIONS	L	T	P	C
		4	0	0	4

COURSE OBJECTIVES

- To foundational knowledge of Nanoscience and related fields.
- To make the students acquire an understanding the properties of nanomaterials
- To help them understand the broad outline of synthesis of nano materials.
- To understand the characterization of nanomaterials.
- To know the different application of nanomaterials.

UNIT – I : INTRODUCTION

Introduction, Emergence of Nanotechnology, Bottom-Up and Top-Down Approaches, Challenges in Nanotechnology. Physical Chemistry of Solid Surfaces - Surface Energy, Chemical Potential as a Function of Surface Curvature, Electrostatic Stabilization, Steric Stabilization.

UNIT – II : PROPERTIES OF NANOMATERIALS ON EFFECT OF SIZE

Thermal Properties, Electrical Properties- Surface scattering, Change of electronic structure, Quantum transport, Effect of microstructure, Lattice Constant, Phase Transformation, Surface plasmon resonance, Quantum size effects Mechanical Properties, Magnetic Properties, Optical Properties, Wear Resistance, Chemical Sensitivity, Dielectric Constant.

UNIT– III : SYNTHESIS OF NANOMATERIALS

Top-Down Approaches - Mechanical Alloying, Severe Plastic Deformation, Lithography. Bottom-Up Approaches-Physical Vapor Deposition (PVD), Molecular-Beam Epitaxy, Chemical Vapor Deposition, Colloidal or Wet Chemical Route, Reverse Micelle Method, Green Chemistry Route - Synthesis of Metallic NPs, Synthesis of Oxide NPs, Factors Affecting Size and Morphology of NPs. Sol-gel Method, Combustion Method, Atomic Layer Deposition.

UNIT- IV : CHARACTERIZATION TECHNIQUES

Structural Characterization -X-ray diffraction (XRD), Scanning electron microscopy (SEM), Transmission electron microscopy (TEM), Scanning probe microscopy (SPM), Gas adsorption. Chemical Characterization -Optical spectroscopy (Raman Spectroscopy, UV–vis Spectroscopy, Photoluminescence Spectroscopy, Fourier Transform Infrared Spectroscopy), Electron spectroscopy, Ionic spectrometry, Light Scattering Method, X-ray Photoelectron Spectroscopy, Thermal Analyzer, Zeta Potential.

UNIT – V : APPLICATIONS

Nanofluids - Automotive Applications, Coolants, Dynamic Seal. Hydrogen Storage, Solar Energy - Photoelectrochemical Cells, Thermoelectric Devices. Automotive Sector - Solar Energy, Fuel Cell Vehicle Radiator, Diesel Particulate Filter, Other Applications. Catalysts and energy storage devices.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Learn about the background on nanoscience.	K1-K6
CO2	Gain knowledge in properties of nanomaterials.	K1-K6
CO3	Understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment	K1-K6
CO4	Apply their learned knowledge to develop Nanomaterial's by different characterization techniques	K1-K6
CO5	Design nanomaterials for various energy applications	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4₃Analyze, K5- evaluate and K6- Create

22UPEST1C14

ENERGY STORAGE SYSTEMS

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To understand the concept lead acid battery
- To study the various applications and working of lithium-ion battery
- To acquire the knowledge of various types of metal- air battery
- To understand the fundamental theories that explain design of fuel cells
- To comprehend the concepts of hybrid energy storage systems

UNIT – I : LEAD ACID BATTERY

Advantages and disadvantages of lead acid batteries - Electrochemical reactions - Physical and chemical properties of active materials - Characteristics and properties of sulphuric acid - Constructional features - Materials and manufacturing methods - SLI (Automotive) batteries - Charge and discharge properties of lead acid batteries - Sealed lead acid or maintenance free batteries fabrication technology and testing - Lead acid battery for PV and automotive applications.

UNIT – II : LITHIUM-ION BATTERY

Advanced anodes and cathodes – Theoretical capacity – Merits and demerits Nanomaterials for anodes - Carbon nanotubes - SnO₂ – NiO - TiO₂& LiTiO₄ Battery fabrication technology and testing - Batteries for electric vehicles - Hybrid vehicles and solar photovoltaic applications.

UNIT– III : METAL-AIR BATTERIES

Lithium-Air - Sodium-Air – Zinc - Air batteries - Principle – Components – anodes – Cathodes- Fabrication – Evaluation – Merits - Demerits and Applications.

UNIT- IV : FUEL CELLS

Membrane electrode assemblies – Fabrication - Catalyst layer - Fuel cell supports – Gas diffusion layer - Bipolar plates - Fuel cell catalysts – Precious and non-precious metal catalysts - Bi-functional catalysts – Nanomaterials for low temperature fuel cells – Reversible fuel cells - Fuel cell stacks and systems - Fuel cells for vehicles and grid connected applications.

UNIT – V : HYBRID ENERGY SYSTEMS

Concept of hybrid energy systems - Supercapacitors – Fundamentals and types - Battery/supercapacitors hybrid systems – Example – Applications - Hybrid fuel cell/battery systems – Example – Applications.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Gain knowledge in lead acid batteries.	K1-K6
CO2	Acquire knowledge in Industrial and usage of Li-Ion batteries	K1-K6
CO3	Advance technologies used in Metal air batteries	K1-K6
CO4	Recent trends of technology used fuel cells.	K1-K6
CO5	Advancement of hybrid storage systems	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1C15**INTERNSHIP**

L	T	P	C
0	0	0	2

COURSE OBJECTIVES

The students may undergo internship training at Research organization / University/ industry for a period as specified in the curriculum during summer vacation. In this case the training has to be undergone continuously for the entire period.

Duration of Internship	Credits
2 Weeks to 4 weeks	2

At the end of internship, the student shall submit a report. A Two-member committee constituted by the Head of the Department will conduct the Viva-Voce Examination. The committee comprises of one expert member from an industry/institutions and One member (Coordinator) from the Department.

INTERNSHIP TRAINING EVALUATION

Report	Presentation		Viva Voce		Total
External	External	Internal	External	Internal	
40	15	15	15	15	100

22UPEST1C16**PROJECT WORK PHASE I**

L	T	P	C
0	0	10	5

COURSE OBJECTIVES

A research project topic may be selected either from published lists or from the creative ideas of the students themselves in consultation with their project supervisor

EVALUATION

Project work evaluation is based on Regulations of Credit system University Departments Post graduate programs of Periyar University

Project work	Internal (40 Marks)			External (60 marks)			
Phase I	Review I	Review II	Review III	Thesis Evaluation (External)	Viva-voice 45 Marks		
					Supervisor	External	Internal
	10	10	20	15	15	15	15

OUTCOME

The students would apply the knowledge gained from theoretical and practical courses in solving problems, so as to give confidence to the students to be creative, well planned, organized, coordinated in their project work phase – II.

22UPEST1C17

PROJECT WORK PHASE II

L	T	P	C
0	0	28	14

COURSE OBJECTIVES

The objective of the research project work is to produce factual results of their applied research idea in the energy science, from phase – I.

EVALUATION

Project work evaluation is based on Regulations of Credit system University Departments Post graduate programs of Periyar University

Project work	Internal (80 Marks)				External (120 marks)			
	Phase II	Review I	Review II	Review III	Conference Presentation/ Journal Article/ Book Chapter Publication/Patent	Thesis Evaluation (External)	Viva –voice 90 Marks	
Supervisor							External	Internal
20		20	30	10	30	30	30	30

OUTCOME

The students would apply the knowledge gained from theoretical and practical courses in solving problems, so as to give confidence to the students to be creative, well planned, organized, coordinated project outcome of the aimed work.

PROFESSIONAL ELECTIVES**22UPEST1E01****POWER PLANT ENGINEERING**

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To Understand the thermodynamic properties and cycles of power plants
- To obtain knowledge on the role of various components in Steam power plants
- To acquire knowledge on the working of gas turbine and diesel power plants
- To Learn the concept of nuclear power plants
- To Attain knowledge on economics of power generation

UNIT – I : POWER PLANT CYCLES

Introduction – classification of power plant cycles – carnot cycle, Rankine cycle, modified Rankine cycle, Reheat cycle, regenerative cycle, binary vapor cycle, Otto cycle, diesel cycle, Dual combustion cycle and gas turbine cycles

UNIT – II : STEAM POWER PLANT

Classification of steam power plant – layout of modern steam power plant - site selection for steam power plant – fuel Handling – combustion equipments for boilers – fluidized bed combustion – ash handling – dust collection – types of chimney draught- Boiler's- Classification of boilers.

UNIT–III : DIESEL AND GAS POWER PLANT

Operation of Diesel power plant – Types of engines – layout of diesel power plant – performance of diesel power plant – Gas Turbines – Site selection – Classification of Gas Turbine power plant – constant pressure Gas Turbine power plant – Constant Volume Gas Turbine power plant.

UNIT-IV: NUCLEAR POWER PLANT

General aspects of nuclear energy – Nuclear power systems – Nuclear reactors – Components of nuclear power plant – Pressurized water reactor – boiling water reactor – Canadian Deuterium uranium reactor – gas cooled Reactor – liquid metal cooled reactor – breeder reactor – Safety measures for Nuclear power plant

UNIT – V: ECONOMICS OF POWER GENERATION

Cost analysis – selection of power generation – Selection of Power plant equipment – Economics of plant selection - Economics of Hydro–Electric power plants – Tariff of electrical Energy.

COURSE OUTCOME

Upon completion of this course, the students will be able to:

CO1	Suggest appropriate power generation technologies for mitigating the energy gap	K1-K6
CO2	Compute the steam rate, heat rate and cost for generating electricity from coal based thermal power plants	K1-K6
CO3	Analyse and suggest measures for improving the performance of gas turbine and diesel power plants	K1-K6
CO4	Identify a suitable type nuclear power plant commensurate with the prevailing conditions	K1-K6
CO5	Asses the economics of different power plants	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E02	ELECTRICAL DRIVES AND CONTROLS	L	T	P	C
		4	0	0	4

COURSE OBJECTIVES

- To expose students to the operation, application and control of power conversion systems employing electric drive to cater to industrial needs.
- To familiarize the operation principles, and design of starting, braking, and speed control arrangements for electric motors and their applications
- To provide strong foundation to assess performance of different industrial drives
- To Design new control and power conversion schemes
- To justify and implementing alternative solutions considering the critical and contemporary issues

UNIT – I : REVIEW OF CONVENTIONAL MOTOR DRIVES

Characteristics of DC and AC motors for various applications - starting and speed control - methods of breaking.

UNIT – II : PHYSICAL PHENOMENA IN ELECTRICAL MACHINES

Various losses in motors - Saturation and Eddy current effects -mmf harmonics and their influence of leakage - stray losses -vibration and noise.

UNIT– III : INTRODUCTION TO SOLID STATE POWER CONTROLLERS

Power devices - Triggering Circuits - Rectifiers - Choppers. Invertors - AC Controllers

UNIT- IV : SUPERCONDUCTIVITY

Super conducting generators - motors and magnets -Super conducting magnetic energy storage (SMES).

UNIT – V : SOLID STATE MOTOR CONTROLLERS

Single and Three Phase fed DC motor drives -AC motor drives -Voltage Control -Rotor resistance control Frequency control - Slip Power Recovery scheme

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Examine various applications in industrial and domestic areas where use of electric drives are essential.	K1-K6
CO2	Classify types of electric drives systems based on nature of loads, control objectives, performance and reliability.	K1-K6
CO3	Combine concepts of previously learnt courses such as, electrical machines, Control and power electronics to cater to the need of automations in industries.	K1-K6
CO4	Select most suitable type and specification of motor drive combination for efficient conversion and control of electric power.	K1-K6
CO5	Identify the critical areas in application levels, and derive typical solutions.	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E03	COGENERATION AND WASTE HEAT RECOVERY	L	T	P	C
		4	0	0	4

COURSE OBJECTIVES

- To gain fundamental knowledge in energy generation, heat transfer in thermal engineering.
- To reduce the impact global warming for betterment of living things to serve healthy life.
- To knowledge on recovery of waste heat recovery
- To know the impact on environmental of waste heat recovery
- To identify the techniques on waste heat recovery

UNIT – I: COGENERATION

Introduction - Principles of Thermodynamics - Combined Cycles - Topping – Bottoming - Organic Rankine Cycles - Advantages of Cogeneration Technology

UNIT – II: APPLICATION & TECHNO ECONOMICS OF COGENERATION

Cogeneration Application in various Industries like Cement, Sugar Mill, Paper Mill etc. Sizing of Waste Heat Boilers - Performance Calculations - Part Load Characteristics. Selection of Cogeneration Technologies - Financial Considerations-Operating and Investments - Costs of Cogeneration.

UNIT–III: WASTE HEAT RECOVERY

Introduction - Principles of Thermodynamics and Second Law - Sources of Waste Heat Recovery - Diesel Engines and Power Plant etc.

UNIT-IV: WASTE HEAT RECOVERY SYSTEMS, APPLICATIONS & TECHNO ECONOMICS

Recuperators - Regenerators - Economizers - Plate Heat Exchangers - Waste Heat Boilers - Classification, Location, Service Conditions, Design Considerations, Unfired Combined Cycle - Supplementary Fired Combined Cycle - Fired Combined Cycle. Applications in Industries - Fluidized Bed Heat Exchangers - Heat Pipe Exchangers - Heat Pumps - Thermic Fluid Heaters Selection of Waste Heat Recovery Technologies - Financial Considerations - Operations and Investment Costs of Waste Heat Recovery

UNIT – V: ENVIRONMENTAL CONSIDERATIONS

Environmental considerations for Cogeneration and Waste Heat Recovery – Pollution

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	The students will acquire fundamental knowledge in energy generation,	K1-K6
CO2	Understand heat transfer in thermal engineering.	K1-K6
CO3	Students will get the ability solve problems using mathematical concepts and to use modern engineering tools, software and equipment	K1-K6
CO4	To analyze and solve complex engineering problems.	K1-K6
CO5	The students will be able to solve real world problems and reduce the impact global warming for betterment of living things to serve healthy life.	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E04

INDUSTRIAL INSTRUMENTATION

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To impart knowledge about characteristics of measurement system and statistical analysis of measured data.
- To make students conversant with the electrical measurements and signal conditioning circuits.
- To provide insight into the digital measuring techniques of physical quantities and Solar instruments.
- To make the students get acquainted with the measurement of thermo-physical properties and air pollutants.
- To inculcate skills in the design and development of measurement and control systems

UNIT – I: MEASUREMENT SYSTEM: CHARACTERISTICS AND STATISTICAL ANALYSIS

Introduction to measurement system, Errors in Measurement, Static and Dynamic characteristics of transducers, Statistical analysis of experimental data – Uncertainty analysis, Regression analysis, Design of experiments – Full and Half factorial design

UNIT – II: ELECTRICAL MEASUREMENTS AND SIGNAL CONDITIONING

Voltage, Current, Power, Energy, Time and Frequency measurement, Frequency Counter, Signal conditioning Circuits: Wheatstone bridge – Differential Amplifier – V to I Converter, I to V Converter, Integrator, Differentiator, Instrumentation Amplifier, Attenuators and Filters, DAC, ADC, PID Controller.

UNIT–III: DIGITAL MEASUREMENT OF PHYSICAL QUANTITIES

Digital measuring techniques of Displacement, Temperature, Pressure, Force, Torque, Vibration, Acceleration, Velocity, Level, Flow, Thermal and Nuclear Radiation. Solar instruments: Pyrheliometers – Pyranometers– Pyrheliometers – Albedometers – Pyrrometers – Pyrgeometers – Net Pyrrometers – Sun photometers

UNIT-IV: MEASUREMENT OF THERMO-PHYSICAL PROPERTIES AND AIR POLLUTANTS

Measurement of Thermal Conductivity – Solids, Liquids and Gas, Viscosity, Gas Diffusion. Calorimetry – Bomb Calorimeter – Continuous flow Calorimeter. Measurement of Heat Transfer, Humidity, Heat flux, pH, Air pollution Sampling and Measurement – Particulate Sampling techniques – Measurement of Sulphur Dioxide, Combustion products, Opacity and Odour

UNIT – V: CONTROL SYSTEMS

Introduction to Arduino and Raspberry Pi – Interfacing with I/O devices of system: Sensors, Display devices, Stepper and Servo motors. Measurement by Data Acquisition System. Introduction to Internet of Things (IoT) – Application of IoT with Raspberry Pi for Process monitoring and control – Energy management. Application of PID controller in PV and Energy systems. Application of Smart Sensors and Intelligent instrumentation and Control

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Analyze and evaluate the uncertainties in measurement data.	K1-K6
CO2	Identify appropriate sensors for measuring electrical quantities and signal conditioning circuits.	K1-K6

CO3	Explain the digital measurement techniques of physical quantities.	K1-K6
CO4	Implement the measurement of thermo-physical properties and air pollutants.	K1-K6
CO5	Design and develop the appropriate measurement and control system for an application.	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create.

HYDRO POWER SYSTEMS

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To understand the process of generation of hydropower, its potential & energy extraction.
- To provide knowledge of planning, design and development of hydroelectric power plants
- To understand the aerodynamic principle of turbine blade design.
- To understand the recent developments and technologies in the wind & hydro energy
- To know about the operation and maintenance of civil engineering works

UNIT – I: INTRODUCTION

Overview of Hydropower Systems — Preliminary Investigation — Determination Requirements - Preparation of Reports and Estimates — Review of World Resource Cost of Hydroelectric Power — Basic Factors in Economic Analysis of Hydropower Projects — Project Feasibility — Load Prediction and Planned Development

UNIT – II: DEVELOPMENT OF PROTOTYPE SYSTEMS

Advances in Planning, Design and Construction of Hydroelectric Power Stations — Trends Development of Generating Plant and Machinery — Plant Equipment for Pumped Store Schemes Some aspects of Management and Operation — Uprating and Refurbishing of turbines.

UNIT-III: POWER STATION OPERATION AND MAINTENANCE

Governing of Water Turbines - Function of Turbine Governor - Condition for Governing stability - Surge Tank Oscillation and Speed Regulative Problem of Turbine Governing Future

UNIT-IV: RESERVOIRS

Problem of Management - Maintenance of Civil Engineering Works - Maintenance of electrical Engineering Works.

UNIT – V: INFORMATION TECHNOLOGY IN HYDRO POWER SYSTEMS

Development of Software. Computer Aided Hydropower System Analysis - Design - Execution - Testing - Operation and Control and Monitoring of Hydropower Services.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Understand the hydrodynamics of open-channel flows.	K1-K6
CO2	Understand the hydraulic design/sizing of the main components of a Hydro power Plant	K1-K6
CO3	Compute steady-state profiles of open-channel flows with variable geometry and discharge.	K1-K6
CO4	Carry out the main hydrological analyses necessary for the design of hydroelectric systems and simulation of their productivity	K1-K6
CO5	Estimate the hydrological alterations induced by the presence of hydroelectric power stations.	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

REFERENCE BOOKS

22UPEST1E06	PRINCIPLES AND APPLICATIONS OF HYDROGEN STORAGE	L	T	P	C
		4	0	0	4

COURSE OBJECTIVES

- To impart knowledge on use of hydrogen for achieving sustainable growth
- To facilitate analysis of the challenges in transition to hydrogen economy
- To understand and demonstrate the hydrogen production technologies, storage methods and strategies for transition to hydrogen economy
- To know the concepts and characteristics of various types of fuel
- To know the application of fuel cells with economic and environment analysis

UNIT – I: INTRODUCTION

History of hydrogen – origin of hydrogen emission – molecular hydrogen – hydrogen in engineering – hydrogen bond – photosynthesis – bio hydrogen

UNIT – II: THERMODYNAMICS

Gibbs Phase Rule; Pressure-Composition-Temperature plots; Van't Hoff plots for absorption desorption enthalpies; Gravimetric capacities; Hysteresis in cycling; Joule-Thomson Effect, Non-ideal treatment of hydrogen gas

UNIT-III: HYDROGEN PRODUCTION

Semiconductor catalyst – water splitting and nano technology – steam reforming – partial oxidation - electrolysis – thermolysis

UNIT-IV: DESIGN AND APPLICATIONS OF STORAGE SYSTEMS

Conventional methods of hydrogen storage – solid state; metal organic – Zeolites – carbons – interstitial hydrides – AB₅ & AB₂ compound

UNIT – V: HYDROGEN FUEL CELL

Hydrogen fuel cell design – proton exchange membrane fuel cells – preparation of nafion membrane - catalyst

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Understand the history beyond the production of hydrogen	K1-K6
CO2	Evaluate the performance of fuel cells under different operating conditions.	K1-K6
CO3	Select and defend appropriate fuel cell technology for a given application.	K1-K6
CO4	Design and develop suitable hydrogen storage system to be used along with fuel cell system.	K1-K6
CO5	Minimize environmental hazards associated with the use of hydrogen storage and fuel cell	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E07	WASTE MANAGEMENT AND ENERGY RECOVERY TECHNIQUES	L	T	P	C
		4	0	0	4

COURSE OBJECTIVES

- To provide information on various methods of waste management
- To familiarize students with recent energy generation techniques
- To detail on the recent technologies of waste disposal
- To know about the disposal of hazardous wastes.
- To make student realize on the importance of healthy environment

UNIT – I: CHARACTERISTICS AND PERSPECTIVES

Sources – Types – Composition – Generation – Estimation Techniques – Characterization – Types of Collection System – Transfer Stations – Transfer Operations – Material Recycle / Recovery Facilities

UNIT – II: UNIT OPERATIONS & TRANSFORMATION TECHNOLOGIES

Separation & Processing: Size Reduction – Separation through Density Variation, Magnetic / Electric Field: Densification - Physical, Chemical and Biological Properties and Transformation Technologies – Selection of Proper Mix of Technologies

UNIT-III: WASTE DISPOSAL

Landfill Classification – Types – Siting Considerations – Landfill Gas (Generation, Extraction, Gas Usage Techniques) – Leachates Formation, Movement, Control Techniques – Environmental Quality Monitoring – Layout, Closure & Post Closure Operation – Reclamation

UNIT-IV: TRANSFORMATION TECHNOLOGIES AND VALUE ADDITION

Physical Transformation: Component Separation & Volume Reduction: Chemical Transformation– Combustion / Gasification / Pyrolysis: Energy Recovery - Biological Transformation – Aerobic Composting – Anaerobic Digestion

UNIT – V: HAZARDOUS WASTE MANAGEMENT & WASTE RECYCLING

Definition – Sources – Classification – Incineration Technology - Incineration vs Combustion Technology – RDF / Mass Firing – Material Recycling: Paper / Glass / Plastics etc., - Disposal of White Goods & E-Wastes

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Waste characterization, Segregation, Disposal will be made known	K1-K6
CO2	Technologies that are available for effective waste disposal along with pros / cons will become cleaner to students	K1-K6
CO3	Able to convert waste into useful energy.	K1-K6
CO4	First-hand information on present day waste related problems (Hazardous Waste, Pharma Waste, Biomedical Waste etc)	K1-K6
CO5	Get awareness on the healthy environment	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E08

**BASICS OF SOLAR ENERGY
TECHNOLOGIES**

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To impart the knowledge on the basics of solar energy and laws related to it.
- To understand the physics of sun, angles and solar time.
- To study the principle operations, types and applications of solar cells.
- To provide insights of solar thermal collectors and basic solar cycles.
- To understand the concepts of various energy storage technologies

UNIT – I: INTRODUCTION

Solar Radiation and Measurement, Solar angles, day length, angle of incidence on tilted surface; Sun-path diagrams; Extra-terrestrial characteristic, Analysis of Indian solar radiation data and applications, pyranometer, pyrheliometer

UNIT – II: HEAT TRANSFER AND RADIATION CHARACTERISTICS

Planck's Law and Wien's Displacement Law - Stefan-Boltzmann Equation - Radiation Intensity and Flux - Radiation Heat Transfer Coefficient -Wind Convection Coefficients - Absorptance and Emittance - Kirchhoff's Law

UNIT-III: SOLAR COLLECTORS

Flat-Plate Collectors - Basic Flat-Plate Energy Balance - Effects of Dust and Shading - Concentrating Collectors - Collector Configurations - Concentration Ratio - Thermal Performance of Concentrating Collectors - Paraboloidal Concentrators - Central-Receiver Collectors

UNIT-IV: SOLAR PHOTOVOLTAICS

Introduction – description and principle of working – performance characteristics of a solar cell – Problems - types of solar cell – cost – problems – photovoltaic system and applications - photovoltaics thermal collectors

UNIT – V: ENERGY STORAGE

Process Loads and Solar Collector - Energy Storage in Solar Process Systems - Water Storage - Stratification in Storage Tanks - Packed-Bed Storage - Storage Walls- Seasonal Storage - Phase Change Energy Storage - Chemical Energy Storage- Battery Storage

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Enumerate the basic laws related to the solar radiation.	K1-K6
CO2	Predict the solar time due to the motion of the earth with respect to sun	K1-K6
CO3	Provide accurate diagrams of solar cells and be able to classify solar cells	K1-K6
CO4	Formulate scientific questions about the imaging type concentrating collectors.	K1-K6
CO5	Identify and classify the different energy storage techniques	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E09

NUCLEAR ENERGY TECHNOLOGY

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To understand the main aspects of Nuclear Engineering and history of nuclear energy
- Describes the interaction of radiation with matter and nuclear reactions
- To familiarize in nuclear fission and the chain reaction
- Introduction to nuclear reactor theory and heat removal from nuclear reactors
- To impart the knowledge of waste disposal and radiation protection

UNIT – I : BASIC NUCLEAR CONCEPTS

Atomic Structure, Nuclear models, Equivalence of mass and energy, binding energy, Radio activity, half-life, mechanism of nuclear fission and fusion, decay chains, critical mass and composition, neutron reactions.

UNIT – II : NUCLEAR FUELS

Nuclear fuel reserves of Uranium and Thorium, Nuclear fuel cycles, characteristics, production and purification, other fuels Zirconium, Beryllium, Reprocessing of nuclear fuels, Thorium

UNIT-III : NUCLEAR REACTORS

Nuclear reactors and classification, boiling water reactors (BWR), pressurized heavy water reactor (PHWR), fast breeder reactor (FBR), basics of nuclear fusion reactor.

UNIT-IV: NUCLEAR POWER PLANT -WASTE MANAGEMENT AND SAFETY

Nuclear Power Plant, Nuclear power plant safety systems, Nuclear Accidents- consequences– case study, criteria for safety, Nuclear Waste management, International Convention on safety aspects, radiation hazards and their prevention.

UNIT – V: NUCLEAR RADIATION APPLICATIONS

Radiation processing of food and allied products, applications of radio isotopes in Industry and Agriculture, Industrial radiotracer applications in Ground water exploration, Desalination

COURSE OUTCOME

Upon completion of this course, the students will be able to:

CO1	At the end of the module the students are able to understand: how nuclear energy is produced today	K1-K6
CO2	The physical principles in which the production of nuclear energy is based how nuclear power systems work	K1-K6
CO3	Basic concepts of radiation and radiation protection	K1-K6
CO4	The basis of nuclear safety, The economic, issues and prospects of nuclear power to day	K1-K6
CO5	Disposal of nuclear waste and radiation protection	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E10

**ENERGY CONSERVATION, ENERGY STORAGE
AND TRANSPORTATION**

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To Introduce to emerging technologies like production and storage of Energy
- To determine conservation of basic techniques and available technologies
- To provide a comprehensive understanding on industrial waste heat recovery and storage systems
- To understand the basic necessities of energy transportation
- The course covers the physical understanding of application of batteries and hydrogen fuel cells

UNIT – I : ENERGY CONSERVATION

Introduction - approaches to energy conservation-energy conservation in the united states- energy conservation in India – cogeneration - smart grid - energy conservation in the community-LED street lights.

UNIT – II : HOME HEATING COOLING AND TRANSPORTATION

Furnace efficiency - heat pumps - air conditioning-integrated HVAC systems - minimizing heat loss-insulation, windows, and air leaks-residential lighting - transportation - FUEL Economy - hybrid vehicles

UNIT–III : ENERGY STORAGE

Introduction - pumped hydroelectric power - bath country pumped hydroelectric facility - compressed air energy storage - implementation of compressed air energy storage-fly wheels-superconducting magnetic energy storage (SMES).

UNIT-IV: BATTERY ELECTRIC VEHICLES (BEVs)

Introduction - battery types - the cost of electricity-BEV requirements and design-flow batteries-history of BEVs-rechargeable sodium batteries-super capacitors.

UNIT – V: HYDROGEN FUELS

Introduction-properties of hydrogen-hydrogen production methods – electrolysis-Thermal Decomposition of Water-Chemical Reactions-Storage And Transportation of Hydrogen-Hydrogen Internal Combustion Vehicles- Fuel Cells-Fuel Vehicles-Hydrogen Present And Future-Efficiency of Different Transportation Technologies

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Exposure Students will be Able to analyses various types of energy storage devices and perform the selection based on techno economic view point	K1-K6
CO2	Ideas in energy conservation, Conception of home heating and transportation	K1-K6
CO3	Detail practical knowledge in energy storage systems	K1-K6
CO4	Conversion process of battery electric vehicles	K1-K6
CO5	Types and usage of hydrogen fuel cells	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E11

WIND ENERGY

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To understand the processes of generation of wind, its potential and energy extraction
- To understand the aerodynamic principles of turbine blade design
- To understand the design considerations and control strategies in wind turbine
- To understand the Economics and applications of wind energy.
- To analyze and evaluate the implication of wind energy

UNIT – I : WIND ENERGY CONVERSION

Wind energy conversion principles; General introduction; Types and classification of WECS; Power, torque and speed characteristics.

UNIT – II : AERODYNAMIC CHARACTERISTICS

Aerodynamic design principles; Aerodynamic theories; Axial momentum, blade element and combine theory; Rotor characteristics; Maximum power coefficient; Prandtl's tip loss Correction

UNIT– III : DESIGN OF WIND TURBINE

Wind turbine design considerations –influence of Reynolds number–load calculation –Stall control– Pitch control–Yaw control–Braking System–turbine blade design.

UNIT- IV : WIND ENERGY ECONOMICS AND APPLICATION

Wind energy in India –Annual average output–Time value of money–depreciation –life cycle costing– Stand alone, grid connected and hybrid applications of WECS -Wind pumps; Case studies

UNIT – V : ENVIRONMENTAL IMPACTS

Environmental Analysis and social costs –Biological impacts –visual impacts –sound impacts – Electromagnetic interface

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Prepare and evaluate detailed project reports for establishing a wind farm	K1-K6
CO2	Understand the operation of a wind farm and economics of power generation	K1-K6
CO3	Gain Knowledge of construction characteristics and performance of wind turbine	K1-K6
CO4	Study economics of harnessing energy from wind energy	K1-K6
CO5	Analyse environmental impacts in installing wind turbine	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E12

SMART GRID TECHNOLOGIES

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To understand concept of smart grid and developments on smart grid.
- To understand smart grid technologies and application of smart grid concept in hybrid electric vehicles etc.
- To have Knowledge on smart substations, feeder automation and application for monitoring and protection.
- To have knowledge on micro grids and distributed energy systems.
- To know power quality aspects in smart grid.

UNIT – I : INTRODUCTION TO SMART GRID

Evolution of electric grid- Concept of smart grid - Definitions – Need of smart grid- Functions of smart grid – Opportunities & barrier of smart grid- Difference between conventional & smart grid- Concept of resilient & self-healing grid present development & international policies on smart grid – case study of smart grid..

UNIT – II : SMART GRID TECHNOLOGIES

Introduction to smart meters- Real time pricing – Smart appliances- Automatic meter reading (AMR)- Outage management systems (OMS)- plug in hybrid electric vehicles (PHEV)-Vehicle to grid- Smart sensors- Home & building automation.

UNIT-III : SMART GRID TECHNOLOGIES

Smart Substations – Substation automation – Feeder automation – Intelligent electronic devices (IED) & their application for monitoring protection – Smart storage like battery – SMES- Pumped hydro – Compressed air energy storage – Wide area measurement system (WAMS)-Phasor measurement unit (PMU).

UNIT-IV: MICRO GRIDS AND DISTRIBUTED ENERGY RESOURCES

Concept of micro grid- Need & applications of micro grid- Formation of micro grid- Issues of interconnection – Protection & control of micro grid- Plastic & organic solar cells- Thin film solar cells – Variable speed wind generators- Fuel cells- Micro turbines- Captive power plants- Integration of renewable energy sources.

UNIT – V: INFORMATION AND COMMUNICATION TECHNOLOGY FOR SMART GRID

Advanced metering infrastructure (AMI)- Home area network (HAN)- Neighborhood area Network (NAN)-Wide area network (WAN).

COURSE OUTCOME

Upon completion of this course, the students will be able to:

CO1	Understand smart grids and analyze grid policies and development in smart grids.	K1-K6
CO2	Develop concepts of smart grid technologies in hybrid electrical vehicles etc.	K1-K6
CO3	Understand smart substation, feeder automation, GIS etc.	K1-K6
CO4	Analyze micro grids and distributed generation systems.	K1-K6
CO5	Analyze the effect of power quality in smart grid and to understand latest developments in ICT for smart grid	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E13

GREEN CONCEPTS IN BUILDINGS

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To understand and apply the concept of availability and to calculate the behavior of real gases
- To predict the condition of systems and analyze them by the criteria of equilibrium
- impart knowledge on different ways of energy building
- to develop capability in the students to design solar energy building systems and make students aware with the challenges of the field,
- to give students in depth understanding of green composite building, related technical and environmental challenges

UNIT – I : INTRODUCTION TO SMART GRID

Environmental implications of buildings energy, carbon emissions, water use, waste disposal; Building materials: sources, methods of production and environmental Implications. Embodied Energy in Building Materials: Transportation Energy for Building Materials; Maintenance Energy for Buildings.

UNIT – II : SMART GRID TECHNOLOGIES

Implications of Building Technologies Embodied Energy of Buildings: Framed Construction, Masonry Construction. Resources for Building Materials, Alternative concepts. Recycling of Industrial and Buildings Wastes. Biomass Resources for buildings.

UNIT-III : SMART GRID TECHNOLOGIES

Comforts in Building: Thermal Comfort in Buildings- Issues; Heat Transfer Characteristic of Building Materials and Building Techniques. Incidence of Solar Heaton Buildings - Implications of Geographical Locations.

UNIT-IV: MICRO GRIDS AND DISTRIBUTED ENERGY RESOURCES

Utility of Solar energy in buildings concepts of Solar Passive Cooling and Heating of Buildings. Low Energy Cooling - Case studies of Solar Passive Cooled and Heated Buildings.

UNIT – V: INFORMATION AND COMMUNICATION TECHNOLOGY FOR SMART GRID

Green Composites for buildings: Concepts of Green Composites - Water Utilization in Buildings, Low Energy Approaches to Water Management. Management of Solid Wastes - Management of Sullage Water and Sewage - Urban Environment and Green Buildings – Green Cover and Built Environment.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	To calculate the availability of the systems and cycles	K1-K6
CO2	Analyze the engineering systems to improve and optimize its performance	K1-K6
CO3	Elaborate knowledge on the building technologies	K1-K6
CO4	Able to apply solar energy in green buildings.	K1-K6
CO5	Familiar in the concept of green composites for buildings.	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPEST1E14**BIO ENERGY CONVERSATION**

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To detail on the types of biomass, its surplus availability and characteristics.
- To create awareness on the technologies available for conversion of biomass to energy in terms of its technical competence and economic implications.
- To impart knowledge on stoichiometry and combustion of bio fuels
- To elucidate on the influence of equivalence ratio on thermochemical conversion of biomass
- To provide insight to the possibilities of producing liquid fuels form biomass

UNIT – I : INTRODUCTION

Biomass: types – advantages and drawbacks – Indian scenario – characteristics – carbon neutrality – conversion mechanisms – fuel assessment studies – densification technologies – Comparison with coal – Proximate & Ultimate Analysis - Thermo Gravimetric Analysis

UNIT – II : BIOMETHANATION

Microbial systems – phases in biogas production – parameters affecting gas production – effect of additives on biogas yield – possible feed stocks. Biogas plants – types – design – constructional details and comparison – biogas appliances

UNIT– III : COMBUSTION

Perfect, complete and incomplete combustion - stoichiometric air requirement for biofuels - equivalence ratio – fixed Bed and fluid Bed combustion – fuel and ash handling system s – steam cost comparison with conventional fuels

UNIT- IV : GASIFICATION, PYROLYSIS AND CARBONISATION

Chemistry of gasification - types – comparison – application – performance evaluation – economics – dual fueling in IC engines – gas cooling and cleaning systems - Pyrolysis - Classification - process governing parameters – Typical yield rates. Carbonization Techniques – merits of carbonized fuels

UNIT – V : LIQUIFIED BIOFUELS

History of usage of Straight Vegetable Oil (SVO) as fuel - Biodiesel production from oil seeds, waste oils and algae - Process and chemistry - Biodiesel health effects / emissions / performance.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Estimate the surplus biomass availability of any given area	K1-K6
CO2	Design a biogas plant for a variety of biofuels	K1-K6
CO3	Determine and compare the cost of steam generation from biofuels with that of coal and petroleum fuels	K1-K6
CO4	Analyze the influence of process governing parameters in thermochemical conversion of biomass	K1-K6
CO5	Synthesize liquid biofuels for power generation from biomass	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

INNOVATION AND ENTREPRENEURSHIP

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To understand the Entrepreneurial Opportunities in current scenario
- To learn various Entrepreneurial Process and Decision Making
- Acquire Knowledge in Crafting business models and Lean Start-ups
- To inculcate ideas in Organizing Business and Entrepreneurial Finance
- To develop and explore business opportunities

UNIT – I : INTRODUCTION TO ENTREPRENEURSHIP

Entrepreneurs; entrepreneurial personality and intentions - characteristics, traits and behavioral; entrepreneurial challenges.

UNIT – II : ENTREPRENEURIAL OPPORTUNITIES

Opportunities. Discovery / creation, Pattern identification and recognition for venture creation: prototype and exemplar model, reverse engineering.

UNIT–III : ENTREPRENEURIALPROCESSANDDECISIONMAKING

Entrepreneurial ecosystem, Ideation, development and exploitation of opportunities; Negotiation, decision making process and approaches, Effectuation and Causation.

UNIT-IV: CRAFTINGBUSINESSMODELSANDLEANSTART-UPS

Introduction to business models; Creating value propositions-conventional industry logic, value innovation logic; customer focused innovation; building and analyzing business models; Business model canvas, Introduction to lean startups, Business Pitching.

UNIT – V: ORGANIZINGBUSINESSANDENTREPRENEURIALFINANCE

Formsofbusinessorganizations;organizationalstructures;EvolutionofOrganization,sourcesandselection of venture finance options and its managerial implications. Policy Initiatives and focus; role of institutions in promoting entrepreneurship

COURSE OUTCOME

Upon completion of this course, the students will be able to:

CO1	To calculate the availability of the systems and cycles	K1-K6
CO2	Analyze the engineering systems to improve and optimize its performance	K1-K6
CO3	Elaborate knowledge on the building technologies	K1-K6
CO4	Able to apply solar energy in green buildings.	K1-K6
CO5	Familiar in the concept of green composites for buildings	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

**POWER ELECTRONICS FOR RENEWABLE
ENERGY SYSTEM**

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To impart knowledge on conversion techniques and renewable energy technologies.
- To study the mechanisms of machines for the conversion of renewable energy sources.
- To learn the power converters and its applications in renewable energy systems.
- To understand the different conversion mechanisms of wind and solar systems.
- To understand the various hybrid systems of renewable energy conversion techniques

UNIT – I : INTRODUCTION TO ENTREPRENEURSHIP

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems

UNIT – II : ENTREPRENEURIAL OPPORTUNITIES

Review of reference theory fundamentals-principle of operation and analysis: IG, PMSG, SCIG and DFIG

UNIT-III : ENTREPRENEURIALPROCESSANDDECISIONMAKING

Solar: Block diagram of solar photo voltaic system -Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection Of inverter, battery sizing, array sizing Wind: three phase AC voltage controllers- AC-DC-AC converters:uncontrolled rectifiers, PWM Inverters, Grid Interactive Inverters-matrix converters. Power Quality Measurements.

UNIT-IV: CRAFTINGBUSINESSMODELSANDLEANSTART-UPS

Stand-alone operation of fixed and variable speed wind energy conversion systems and solar system- Grid connection Issues -Grid integrated PMSG and SCIG Based WECS Grid Integrated solar system

UNIT – V: ORGANIZINGBUSINESSANDENTREPRENEURIALFINANCE

Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV Maximum Power Point Tracking (MPPT).

COURSE OUTCOME

Upon completion of this course, the students will be able to:

CO1	Analyze the various conversion techniques in renewable energy technologies.	K1-K6
CO2	Apply the various mechanisms for the conversion of renewable energy sources.	K1-K6
CO3	Identify the appropriate power converters for renewable energy systems.	K1-K6
CO4	Implement the different conversion mechanisms for wind and solar systems.	K1-K6
CO5	Recognize the importance of various hybrid renewable energy systems	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

SUPPORTIVE COURSES**22UPESTS01****RENEWABLE ENERGY**

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To acquire knowledge about the conventional and non-conventional energy sources
- To analyze the working of Solar Thermal and PV systems
- To gain knowledge on Wind energy conversion
- To know the importance and methods of conversion of bio-based waste into useful form of energy.
- To obtain information on the source and utilization of geothermal energy

UNIT – I: ENERGY SOURCES

Environment and sustainable development - Energy sources - sun as the source of energy – photosynthesis - classification of energy sources - fossil fuel reserves and resources - overview of global/ India's energy scenario.

UNIT – II: SOLAR ENERGY

Solar radiation: measurements and prediction - Solar thermal energy conversions systems: flat plate collectors - solar concentrators and other applications - Solar Photovoltaic: Principle of photovoltaic conversion of solar energy.

UNIT-III: WIND ENERGY

Wind Resource: Meteorology of wind, India's wind energy potential and challenges - distribution across the world - Eolian features - Biological indicators - Wind measurement systems - Wind Energy Conversion Systems.

UNIT-IV: BIOENERGY

Biomass as energy resources - Classification and estimation of biomass - Source and characteristics of biofuels – Biodiesel – Bioethanol – Biogas - Waste to energy conversions.

UNIT – V: GEOTHERMAL ENERGY

Introduction - Geothermal sources - advantages and disadvantages of geothermal energy over other energy forms - Geothermal energy in India: Prospects - Applications of Geothermal energy - Material selection for geothermal power plants

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Awareness and familiarization in the different forms of energy sources	K1-K6
CO2	Able to select the suitable Solar energy source based on the working principle.	K1-K6
CO3	The knowledge about importance of wind energy conservation and the impact on environment	K1-K6
CO4	Understand the concept of conversion of bio-based waste into useful form of energy.	K1-K6
CO5	Awareness on the existence of various mechanisms for conversion using geothermal	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPESTS02

**CLIMATE CHANGE AND CO₂ EMISSION
ASSESSMENT**

L	T	P	C
4	0	0	4

COURSE OBJECTIVES

- To study the global climate change
- To analysis emission assessment
- To familiarize about impact of climate changes on the environment.
- To know the carbon dioxide conversion and carbon footprint
- To understand the concept of carbon credit.

UNIT – I: INTRODUCTION TO ENERGY

Introduction to Energy: Overview of energy sources and technologies - energy consumption Pattern - social and economic implications of energy uses - equity and disparity

UNIT – II: INTRODUCTION TO GLOBAL CLIMATE CHANGE

Introduction to global climate change: theory of global climate change - mechanism of Greenhouse Gases Emission - theory and proof of climate change impacts - global overview - International concern on Climate change and mitigation efforts.

UNIT– III: CARBON DIOXIDE (CO₂) EMISSIONS AND CONVERSION/CONSUMPTION

Carbon dioxide (CO₂) emissions in relation to energy conversion/consumption: theory of CO₂ emission in relation to energy conversion processes.

UNIT- IV: METHODOLOGY FOR CO₂ ASSESSMENT/CARBON FOOT PRINT

Methodology for CO₂ assessment/carbon foot print: estimation of emission from fossil fuel combustion (Fuels and their composition - fuel to energy conversion - concept of emission factor) - emission from major sectors (industry – transport – agriculture – domestic - service)

UNIT – V: CARBON CREDIT

Carbon credit: Definition - concept and examples - Carbon credit - national policies vis-à-vis international market scenario - Current efforts and future prospect/limitation of carbon trading mechanism.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Depth knowledge in global climate change and the impact of climate change on the living things.	K1-K6
CO2	Able to analysis emission characteristics and its impact on the globe.	K1-K6
CO3	Obtained elaborate knowledge about impact of climate changes on the environment.	K1-K6
CO4	Knowledge on carbon dioxide conversion and carbon footprint	K1-K6
CO5	Knowledge on concept of carbon credit and their importance	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPESTS03

ENERGY SCENARIO AND POLICY

L	T	P	C
4	0	0	4

COURSE OBJECTIVE

- To know the Energy Scenario in India and Global
- To know Indian Energy Conservation Act
- To understand the details on government policies in energy.
- To know the energy efficiency and climate change policies
- To know measures the impact of energy savings on environment

UNIT – I: ENERGY SCENARIO

Introduction - Primary and Secondary Scenario - Final Energy Consumption - India's Energy Scenario - Sector wise Energy Consumption in India - Energy Intensity on Purchasing Power Parity (PPP) - Energy Security

UNIT – II: ENERGY CONSERVATION ACT

Salient Features of the Energy Conservation Act, 2001 - Scheme of BEE under the Energy Conservation Act-2001 - Electricity Act 2003 - National Action Plan on Climatic Change (NAPCC)

UNIT-III: ENERGY POLICY

Global energy issues - National & State level energy issues - National & State energy policy - Industrial energy policy - Energy security - Energy vision - Energy pricing & Impact of global variations - Energy productivity (National & Sector wise productivity).

UNIT-IV: ENERGY EFFICIENCY AND CLIMATE CHANGE

Energy and Environment - Global Environment Issues - Acid Rain - Ozone Layer Depletion - Global Warming and Climate Change - Global Warming and Climatic Change Impacts - United Nations Framework Convention on Climate Change (UNFCCC) - The Intergovernmental Panel on Climate Change (IPCC) - Conference of Parties (COP) - The Kyoto Protocol

UNIT – V: IMPACT OF ENERGY ON ECONOMY AND DEVELOPMENT

Energy for Sustainable Development - Energy and Environmental policies - Need for use of new and renewable energy sources, present status and future of nuclear and renewable energy - Energy Policy Issues related Fossil Fuels, Renewable Energy, Power sector reforms, restructuring of energy supply sector, energy strategy for future.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Familiar knowledge in energy scenario globally and locally.	K1-K6
CO2	Gain knowledge on Indian Energy Conservation Act	K1-K6
CO3	Acquire information on government energy policies	K1-K6
CO4	Understand the Energy efficiency and climate change policies.	K1-K6
CO5	Know about the effects of energy demand on environment	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPESTS04	ERECTION AND MAINTENANCE OF REFRIGERATION AND AIR- EQUIPMENT	L	T	P	C
		4	0	0	4

COURSE OBJECTIVES

- To teach the principal of energy and environmental issues
- To explore the environmental impact of various energy sources and also the effects of different types of pollutants.
- To know the solar energy and conversion technologies.
- To understand the biomass and geothermal energy systems and conversion techniques.
- To get an elaborate knowledge on pollution control methods.

UNIT – I: INTRODUCTION

Refrigeration and air-conditioning plant layout, parameters affecting the location.

UNIT – II: ERECTION OF R&AC SYSTEMS

Erection methodology, foundation, padding, network analysis, critical path, interconnections; safety precautions, air handling equipment's. Maintenance procedures.

UNIT– III: CARBON DIOXIDE (CO₂) EMISSIONS AND CONVERSION/CONSUMPTION

Carbon dioxide (CO₂) emissions in relation to energy conversion/consumption: theory of CO₂ emission in relation to energy conversion processes.

UNIT- IV: TOTAL PREVENTIVE MAINTENANCE

TPM Principles, Corrective and preventive measures and Reliability analysis.

UNIT – V: MAINTENANCE SCHEDULES

Studies on different maintenance schedules followed by various industries

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	Explain the basic concepts of Refrigeration	K1-K6
CO2	Knowledge on erection of various kinds of R & AC systems.	K1-K6
CO3	Able to measure Carbon Dioxide (CO ₂) Emissions and conversion	K1-K6
CO4	Explain the concepts of preventive maintenance in Air conditioning	K1-K6
CO5	Good knowledge on maintenance SCHEDULES	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

22UPESTS05	GREEN CONCEPTS IN BUILDING	L	T	P	C
		4	0	0	4

COURSE OBJECTIVES

- To understand and apply the concept of availability and to calculate the behavior of real gases
- To predict the condition of systems and analyze them by the criteria of equilibrium
- To know the building technologies
- To get a knowledge on use of solar energy in green buildings.
- To know the concept of green composites for buildings.

UNIT – I: ENVIRONMENTAL IMPLICATIONS OF BUILDINGS

Environmental implications of buildings energy, carbon emissions, water use, waste disposal; Building materials: sources, methods of production and environmental Implications. Embodied Energy in Building Materials: transportation Energy for Building Materials; Maintenance Energy for Buildings.

UNIT – II: IMPLICATIONS OF BUILDING TECHNOLOGIES

Implications of Building Technologies Embodied Energy of Buildings: Framed Construction, Masonry Construction. Resources for Building Materials, Alternative concepts. Recycling of Industrial and Buildings Wastes. Biomass Resources for buildings.

UNIT– III: COMFORTS IN BUILDING

Comforts in Building: Thermal Comfort in Buildings- Issues; Heat Transfer Characteristic of Building Materials and Building Techniques. Incidence of Solar Heat on Buildings- Implications of Geographical Locations.

UNIT- IV: UTILITY OF SOLAR ENERGY IN BUILDINGS

Utility of Solar energy in buildings concepts of Solar Passive Cooling and Heating of Buildings. Low Energy Cooling. Case studies of Solar Passive Cooled and Heated Buildings.

UNIT – V: GREEN COMPOSITES FOR BUILDINGS

Green Composites for buildings: Concepts of Green Composites. Water Utilization in Buildings, Low Energy Approaches to Water Management. Management of Solid Wastes. Management of Sullage Water and Sewage. Urban Environment and Green Buildings. Green Cover and Built Environment.

COURSE OUTCOME

Upon completion of this course, the students will be able to

CO1	To calculate the availability of the systems and cycles	K1-K6
CO2	Analyze the engineering systems to improve and optimize its performance	K1-K6
CO3	Elaborate knowledge on the building technologies	K1-K6
CO4	Able to apply solar energy in green buildings.	K1-K6
CO5	Familiar in the concept of green composites for buildings	K1-K6

K1- Remember, K2- Understand, K3- Apply , K4- Analyze, K5- evaluate and K6- Create

VALUE ADDED COURSE

22UPESTVA01

ALTERNATE FUELS AND EMISSIONS

COURSE OBJECTIVES

- To present a problem oriented in depth knowledge of Alternate fuel and energy system
- To address the underlying concepts and methods behind alternate fuel and energy system
- To know the basics of engine emission standards.

UNIT – I: INTRODUCTION

IC engines classifications (SI & CI engine, 2-stroke & 4-stroke engine), Thermodynamic Cycles Combustion in IC engine: Thermochemistry of Fuel-Air mixture, characterization of flame, Combustion stoichiometry, Chemical equilibrium, Chemical kinetics Properties of fuel and its effect on combustion: Engine knock & detonation, abnormal combustion

UNIT – II: ALTERNATE FUELS, PROPERTIES, SUITABILITY AND EMISSIONS

CNG, LPG, H₂, Hythane, Di-Methyl Ether, Ethanol, Biodiesel.

UNIT– III: NOVEL TECHNOLOGIES AND STRATEGIES TO CURB EMISSIONS

Homogeneous charge CI (HCCI) engines, Premixed Charge Compression Ignition (PCCI), Emission control technologies (EGR, SCR, DOC, DPF etc.) (To be updated periodically with new technologies and strategies).

COURSE OUTCOME

Upon completion of this course, the students will be able to

- The student can identify different areas of alternate fuels and energy system.
- Can find the applications of all the areas in day-to-day life.
- Will understand the emission norms

REFERENCE BOOKS

1. Internal Combustion engine fundamentals: J B Heywood, Tata Mc-Graw Hill Publications, 2011
2. Internal Combustion Engines: V Ganeshan, Tata Mc-Graw Hill Publications, 2012
3. IC Engines: Combustion and Emissions: BP Pundir, Narosa Publishing House, 2010
4. The Internal combustion Engine in theory and practice: C F Taylor, MIT Press, Cambridge, 1985
5. Alternative Fuels Guidebook, Properties, Storage, Dispensing, and Vehicle Facility Modifications: RL. Bechtold, SAE Publications, 1997

22UPESTVA02

**BIOMASS AND ITS CONVERSION
TECHNOLOGIES**

COURSE OBJECTIVES

- Identify potential biomass feedstocks including energy crops;
- Have an understanding of the existing and emerging biomass to energy technologies;
- Develop a critical thinking about sustainability & resilience; and

UNIT – I: INTRODUCTION

Origin of Biomass: Resources: Classification and characteristics; Techniques for biomass assessment; Application of remote sensing in forest assessment; Biomass estimation

UNIT – II: THERMO-CHEMICAL CONVERSION

Direct combustion, incineration, pyrolysis, gasification and liquefaction; Economics of Thermo- chemical conversion. biomass processing, briquetting, palletization, biomass stoves, biomass carbonization, production of syngas from biomass.

UNIT– III: BIOMASS PRODUCTIVITY

Energy plantation and power Programme. Biomass renewable energy program of central govt. and state government Regulations, policies, feed in tariff policies, grid injection, hybrid systems, and cost economics.

COURSE OUTCOME

Upon completion of this course, the students will be able to

- Acquiring the knowledge of biomass energy.
- Understanding Biomass as a renewable energy and its importance with respect to environment protection
- To design bio-energy systems.

REFERENCE BOOKS

1. Fuel Cells by Bockris and Srinivasan; McGraw Hill,1969.
2. Solar Energy: Fundamentals and Applications by H.P. Garg& Jai Prakash, Tata McGraw Hill.
3. Wind Power Technology, Joshua Earnest, PHI Learning, 2014
4. Non-Conventional Energy Resources by S. Hasan Saeed and D. K. Sharma, S. K. Kataria & Sons, 2019.

22UPESTVA03

MATERIALS FOR ENERGY APPLICATIONS

COURSE OBJECTIVES

- To understand the concept of energy materials for energy generation.
- To analyze the material design, related to photovoltaic cell and energy storage
- To acquire information on phase change materials

UNIT – I: INTRODUCTION

Materials Glazing materials, Properties and Characteristics of Materials, Reflection from surfaces, Selective Surfaces: Ideal coating characteristics, Types and applications, Anti-reflective coating, Preparation and characterization. Reflecting Surfaces and transparent materials, Types of Insulation and properties

UNIT – II: MATERIALS FOR PHOTOVOLTAIC'S CONVERSION

Si and Non-Si materials, crystalline, semi-crystalline, Polycrystalline and Amorphous materials, p- n junction: homo and hetero junctions, Metal-semiconductor interface

UNIT– III: PHASE CHANGE MATERIALS

Phase Change Materials Selection criteria of Phase change, Materials use in Solar heating or cooling, Research Status

COURSE OUTCOME

Upon completion of this course, the students will be able to

- Apply the concept of materials required for energy storage and energy generation.
- Detailed study on properties of various energy-oriented materials for energy applications

REFERENCE BOOKS

1. Solar Thermal Energy Storage by HP Garg, D Reidel Publishing Company, 1985.
2. Mathematical Modeling of Melting and Freezing process by V Alexiades and AD Solomon, Hemisphere Publishing Corporation, Washington,1993.
3. Chemical and Electrochemical Energy System by R Narayan, B Viswanathan, Universities Press.
4. Energy Storage Systems by B Kilic and S Kakac (Ed), KAP, London

22UPESTVA04

ELECTRIC VEHICLES

COURSE OBJECTIVES

- To present a comprehensive overview of Electric and Hybrid Electric Vehicle
- To know about the sources of energy for electrical vehicles
- To obtain knowledge on storage techniques on electrical vehicles

UNIT – I: INTRODUCTION

The Electric Vehicle Debate, Primary Energy Sources and Alternative Fuels for Transportation, History of electric Vehicles, Electrochemical Power Sources –Secondary Batteries and Fuel Cells

UNIT – II: SOURCES

Aqueous Electrolyte Batteries –Lead Acid, Nickel – Iron, Nickel – Zinc, Metal – Air Zinc – Halogen - Non-Aqueous Electrolyte Batteries- High Temperature Batteries, Organo Electrolyte and Solid-State Batteries

UNIT– III: OVERVIEW OF HYBRID ELECTRIC VEHICLES

Combustion Engine Hybrid Electric Vehicles, Laboratory Test of Electric Vehicle Batteries, Vehicle tests with Electric Vehicle Batteries, Future of Electric Vehicles

COURSE OUTCOME

Upon completion of this course, the students will be able to

- Choose a suitable drive scheme for developing an electric or hybrid vehicle depending on resources
- Design and develop basic schemes of electric vehicles and hybrid electric vehicles.
- Understanding electric car energy resources
- Experience of electric car storage technology.

REFERENCE BOOKS

1. Hand Book of Batteries and Fuel cells, 3rd Edition, Edited by David Linden and Thomas. B. Reddy, McGraw Hill Book Company, N.Y. 2002.
2. Fuel Cells, Principles and Applications, Viswanathan, B. and Scibioh, Aulice M, Universities Press, 2006.
3. The Essential Hybrid Car Handbook: A Buyer's Guide (Paperback)by Nick Yost, The Lyons Press, N.Y. 2006.

22UPESTVA05

DESIGN THINKING

COURSE OBJECTIVES

- To introduce the idea of design thinking in product development
- To understand the practice of design thinking
- To leverage use of tools for the design process

UNIT – I: INTRODUCTION

Understanding Design thinking – Shared model in team-based design – Theory and practice in Design thinking – Exploring work of Designers across globe – Minimum Viable Products (MVP) or Prototyping

UNIT – II: TOOLS FOR DESIGN THINKING

Real-Time design interaction captures and analysis – Enabling efficient collaboration in digital space – Empathy for design – Collaboration in distributed Design

UNIT– III: DESIGN THINKING IN IT

Design Thinking to Business Process modeling – Agile in Virtual collaboration environment – Scenario based Prototyping

COURSE OUTCOME

Upon completion of this course, the students will be able to

- Apply design thinking for product development
- Use design thinking tools
- Identify need for products and disruption

REFERENCE BOOKS

1. Roger Martin, "The Design of Business: Why Design Thinking is the Next Competitive Advantage", Harvard Business Press, 2009.
2. Hasso Plattner, Christoph Meinel and Larry Leifer (eds), "Design Thinking: Understand – Improve – Apply", Springer, 2011 (Unit III).
3. Idris Mootee, "Design Thinking for Strategic Innovation: What They Can't Teach You at Business or Design School", John Wiley & Sons 2013. (Unit IV).

22UPESTVA06 FIRST AID & FIRE FIGHTING SAFETY MANAGEMENT

COURSE OBJECTIVES

- Learn about FIRST AID measures
- Learn about accident investigations and preventive measures
- Understand safety, best practices and expectations

UNIT – I: FIRST AID

First Aider and Managing Incidents: First aider - Protection from infection - Dealing with a casualty - Requesting help - The use of medication - Remember your own needs - Action at an emergency – and Electrical incidents.

UNIT – II: INDUSTRIAL SAFETY

Accident History: Fundamentals of Safety, Importance of Safety Policy – Accident Types, Causes, Theories, Accident Prevention Measures.

UNIT– III: FIRE FIGHTING

Causes of Fires: Types of Flammable Materials – Solids – Liquids - Gases & Fire Triangle. Types of Fires: Classifications of Fires – Gas Fires – Liquid Fires – Solid Fire – Electrical Fire – Metal Fire & Kitchen Fire.

COURSE OUTCOME

Upon completion of this course, the students will be able to

- Students get practical knowledge FIRST AID measures
- Understanding importance of Industrial Safety
- To acquire knowledge about Fire Fighting

REFERENCE BOOKS

1. Fire Safety Management Handbook Third Edition By Daniel E Della Giustina, CRC Press, 2014
2. AIChE/CCPS, Guidelines for Hazard Evaluation Procedures second edition. Centre for Chemical Process Safety, American Institute of Chemical Engineers, New York,1992
3. V.J. Davies and K. Tomasin, Construction Safety Handbook.

22UPESTVA07 REFRIGERATION AND AIR CONDITIONING

COURSE OBJECTIVES

- Explaining the different types of refrigerant, their properties, and selecting appropriate refrigerant for a HVAC system. Learn about accident investigations and preventive measures
- Explaining different types and components of RAC systems.
- Applying the safety and types of control in HVAC systems.

UNIT – I: INTRODUCTION, REFRIGERANTS AND THEIR ENVIRONMENTAL ISSUE

Applications of air-conditioning and refrigeration, energy usage in air-conditioning/buildings - Designation of refrigerants, Selection of refrigerants, Ozone Depletion Potential (ODP) and Global Warming (GW), Montreal and Kyoto protocols Total Equivalent Warming Index (TEWI), Azeotropic and zeotropic mixtures, alternative to existing CFC and HCFC refrigerants.

UNIT – II: AIR CONDITIONING SYSTEM TYPES AND AIR DISTRIBUTION

Major system types in air-conditioning: unitary, package, central chilled water based systems; components of chilled water system, concept of primary-secondary chilled water pumping; concept of variable flow systems, components of non-chilled water based system, types and role for energy efficiency, comparison of variable refrigerant flow and constant flow systems

UNIT– III: OTHER REFRIGERATION SYSTEMS, CONTROLS AND SAFETY IN RAC

Introduction to Building Management System, major components and use of BMS, instrumentation requirements, concept of Direct Digital Control.

COURSE OUTCOME

Upon completion of this course, the students will be able to

- Explain the different types of refrigerant, their properties, and select appropriate refrigerant for a HVAC system.
- Explain different types and components of RAC systems.
- Apply the safety and types of control in HVAC systems

REFERENCE BOOKS

1. Arora C P, Refrigeration and Air Conditioning, 3rd Edition, Tata McGraw-Hill, 2017.
2. Stoecker W.F and Jones J.W, Refrigeration and Air Conditioning, 2nd Edition, Tata McGrawHill, 1982.
3. ASHRAE Handbook Series: Fundamentals, Refrigeration, Systems and Equipments and HVAC Applications, 2014-18, ASHRAE Inc, Atlanta, USA

22UPESTVA08 INDUSTRIAL ROBOTICS

COURSE OBJECTIVES

- Explaining the concepts of industrial robots with respect to its classification, specifications and coordinate systems. Reviewing the need and application of robots in different engineering fields
- Exemplifying the different types of robot drive systems as well as robot end effectors.
- Implementing robots in various industrial sectors and interpolating the economic analysis of robots

UNIT – I: FUNDAMENTALS OF ROBOT

Robot - Definition - Robot Anatomy – Co-ordinate Systems, Work Envelope Types and Classification- Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Different Applications.

UNIT – II: SENSORS AND MACHINE VISION

Requirements of a sensor, Principles and Applications of the types of sensors and Digitizing Image Data Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications, Inspection, Identification, Visual Servicing and Navigation.

UNIT– III: IMPLEMENTATION AND ROBOT ECONOMIC

RGV, AGV; Implementation of Robots in Industries-Variou Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

COURSE OUTCOME

Upon completion of this course, the students will be able to

- Explain the concepts of industrial robots with respect to its classification, specifications and coordinate systems. Review the need and application of robots in different engineering fields.
- Apply the different sensors and image processing techniques in robotics to improve the ability of robots.
- Implement robots in various industrial sectors and interpolate the economic analysis of robots
