B.Sc- Data Science Syllabus under CBCS Pattern with effect from 2023-2024 onwards

# **PERIYAR UNIVERSITY**

# PERIYAR PALKALAI NAGAR SALEM-636011

# **DEGREE OF BACHELOR OF SCIENCE**

Syllabus for

# **B.Sc., DATA SCIENCE**

(SEMESTER PATTERN- CBCS)

(For Candidates admitted in the colleges affiliated to

Periyar university from 2023-2024 onwards)

# TAMILNADU STATE COUNCIL FOR HIGHER EDUCATION CHENNAI-600005

#### **1. Introduction**

#### **B.Sc. Data Science**

Data Science is a vast field comprising many topics of Statistics, Mathematics, and IT. A Data Science course syllabus for beginners covers basic and advanced concepts of data analytics, machine learning, statistics, and programming languages like Python or R. It also teaches students how to interpret large datasets and identify patterns to create predictive models. Data Science has come a long way. Data Scientists were once referred to as 'business problem solvers' who knew how to make sense of incoherent data clusters. Fast-forward to the present, Data Scientists are the most important resources for any business looking to thrive in this mad rush. They are now the 'wizards of all problem solvers'.

The course is enabled to include several interdisciplinary areas like: programming languages, algorithms, operating systems, databases, machine learning, data mining, business intelligence, big data, probability and statistics, data optimization, statistical simulation and data analysis, management decision analysis, decision models and predictive analysis. Data Science has gained paramount importance in the computer science domain. The need for scientists who understand data in all its aspects will continue to grow strongly. Students graduating from the program will have significantly more depth and breadth in the broad area of Data Science and receive all the information they need to work with various kinds of data and statistical data. The program is designed so that students have in-depth knowledge of the many approaches, aptitudes, methodologies, and instruments needed to deal with corporate data. Students receive instruction in the abilities needed to find the needed solutions and assist in making significant judgments.

This is the primary reason the syllabus of Data Science courses includes concepts that touch base on cloud computing, big data, natural language processing, and data sentiment analysis. The future of Data Science is estimated to bring opportunities in various areas of banking, finance, insurance, entertainment, telecommunication, automobile, etc. A data scientist will help grow an organization by assisting them in making better decisions. Data science has become important due to recent technology disruptions. Most fundamental is Moore's Law which has driven an exponential growth in computing, storage, and communications per rupee over the past 50 years. This rate of growth shows no signs of abating. Consequently, today we have the Internet of Things: a plethora of sensors costing 10s of rupees or less, a global Internet with almost limitless bandwidth, and enormous storage in global clouds.

The present era is full of technological advances in almost all spectrum of life and we are flooded with enormous amount of data. There is an increasing demand of capturing, analyzing, and synthesizing this large amount of data sets in a number of application domains to better understand various phenomena and to convert the information available in the data into actionable strategies such as new scientific discoveries, business applications, policy making, and healthcare etc.

Data science is the area where applications of various tools and techniques from the disciplines of applied statistics, mathematics and computer science are used to get greater insight and to make better and informed decisions for various purposes by analyzing a large amount of data. Consequently, the study of data science as a discipline has become essential to cater the growing need for professionals and researchers to deal with the future challenges.

LEARNING OUT	<b>ICOMES-BASED CURRICULUM FRAMEWORK GUIDELINES BASED</b>
R	EGULATIONS FOR UNDER GRADUATE PROGRAMME
Programme:	B.Sc., Data Science
Programme Code:	
Duration:	3 years [UG]
Programme	PO1: Disciplinary knowledge: Capable of demonstrating comprehensive
Outcomes:	knowledge and understanding of one or more disciplines that form a part of
	an undergraduate Programme of study
	<b>PO2: Communication Skills:</b> Ability to express thoughts and ideas effectively
	in writing and orally; Communicate with others using appropriate media;
	confidently share one's views and express herself/himself; demonstrate the
	ability to listen carefully, read and write analytically, and present complex
	information in a clear and concise manner to different groups.
	<b>PO3: Critical thinking:</b> Capability to apply analytic thought to a body of
	knowledge; analyse and evaluate evidence, arguments, claims, beliefs on
	the basis of empirical evidence; identify relevant assumptions or
	implications; formulate coherent arguments; critically evaluate practices,
	policies and theories by following scientific approach to knowledge
	development.

<b>PO4: Problem solving: Capacity</b> to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge; and apply one's learning to real life situations.
<b>PO5: Analytical reasoning</b> : Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyze and synthesize data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.
<ul> <li>PO6: Research-related skills: A sense of inquiry and capability for asking relevant/appropriate questions, problem arising, synthesising and articulating; Ability to recognise cause-and-effect relationships, define problems, formulate hypotheses, test hypotheses, analyse, interpret and draw conclusions from data, establish hypotheses, predict cause-and-effect relationships; ability to plan, execute and report the results of an experiment or investigation</li> <li>PO7: Cooperation/Team work: Ability to work effectively and respectfully with diverse teams; facilitate cooperative or coordinated effort on the part of a group, and act together as a group or a team in the interests of a common cause and work efficiently as a member of a team</li> </ul>
<b>PO8: Scientific reasoning</b> : Ability to analyse, interpret and draw conclusions from quantitative/qualitative data; and critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.
<b>PO9: Reflective thinking</b> : Critical sensibility to lived experiences, with self awareness and reflexivity of both self and society.
<b>PO10 Information/digital literacy:</b> Capability to use ICT in a variety of learning situations, demonstrate ability to access, evaluate, and use a variety of relevant information sources; and use appropriate software for analysis of data.
<b>PO 11 Self-directed learning</b> : Ability to work independently, identify appropriate resources required for a project, and manage a project through to completion.
<b>PO 12 Multicultural competence:</b> Possess knowledge of the values and beliefs of multiple cultures and a global perspective; and capability to effectively engage in a multicultural society and interact respectfully with diverse groups.
<b>PO 13: Moral and ethical awareness/reasoning</b> : Ability to embrace moral/ethical values in conducting one's life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Capable of demon starting the ability to identify ethical issues related to one's work, avoid unethical behaviour such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights; appreciating environmental and sustainability issues; and

	adopting objective, unbiased and truthful actions in all aspects of work.
	<b>PO 14: Leadership readiness/qualities:</b> Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination, in a smooth and efficient way.
	<b>PO 15: Lifelong learning:</b> Ability to acquire knowledge and skills, including "learning how to learn", that are necessary for participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives, and adapting to changing trades and demands of work place through knowledge/skill development/reskilling.
Programme Specific Outcomes:	<ul> <li>PSO1: To enable students to apply basic microeconomic, macroeconomic and monetary concepts and theories in real life and decision making.</li> <li>PSO 2: To sensitize students to various economic issues related to Development, Growth, International Economics, Sustainable Development and Environment.</li> <li>PSO 3: To familiarize students to the concepts and theories related to Finance, Investments and Modern Marketing.</li> <li>PSO 4: Evaluate various social and economic problems in the society and develop answer to the problems as global citizens.</li> <li>PSO 5: Enhance skills of analytical and critical thinking to analyze effectiveness of economic policies.</li> </ul>

	<b>PO 1</b>	PO2	PO3	PO4	PO5	PO6	<b>PO7</b>	PO8
PSO 1	Y	Y	Y	Y	Y	Y	Y	Y
PSO 2	Y	Y	Y	Y	Y	Y	Y	Y
PSO3	Y	Y	Y	Y	Y	Y	Y	Y
PSO 4	Y	Y	Y	Y	Y	Y	Y	Y
PSO 5	Y	Y	Y	Y	Y	Y	Y	Y

#### 3 – Strong, 2- Medium, 1- Low

### Highlights of the Revamped Curriculum:

- Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, devising mathematical models and algorithms for providing solutions to industry /

real life situations. The curriculum also facilitates peer learning with advanced mathematical topics in the final semester, catering to the needs of stakeholders with research aptitude.

- The General Studies and Mathematics based problem solving skills are included as mandatory components in the 'Training for Competitive Examinations' course at the final semester, a first of its kind.
- The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- The Industrial Statistics course is newly introduced in the fourth semester, to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.
- The Internship during the second year vacation will help the students gain valuable work experience, that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge to practical situations. The state of art technologies in conducting a Explain in a scientific and systematic way and arriving at a precise solution is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.
- State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest - Artificial Intelligence.

### Value additions in the Revamped Curriculum:

Semester	Newly introduced Components	Outcome / Benefits
I	Foundation Course To ease the transition of learning from higher secondary to higher education, providing an overview of the pedagogy of learning Literature and analysing the world through the literary lens gives rise to a new perspective.	<ul> <li>Instill confidenceamong students</li> <li>Create interest for thesubject</li> </ul>

	SkillEnhancementpapers(Disciplinecentric/Entrepreneurial)/	<ul> <li>Industry readygraduates</li> <li>Skilled human resource</li> <li>Students are equipped with essential skills to make them employable</li> </ul>
I, II, III, IV		Training on language and communication skills enable the students gain knowledge and exposure in the competitive world.
		<ul> <li>Discipline centric skill will improve the Technical knowhow of solving real life problems.</li> </ul>
III, IV, V & VI	Elective papers	<ul> <li>Strengthening thedomain knowledge</li> <li>Introducing thestakeholdersto theState-of Art techniquesfrom the streams ofmulti-disciplinary, cross disciplinary andinter disciplinary nature</li> <li>Emerging topics inhigher education/industry/ communication network / health sectoretc. are introduced with hands-on-training.</li> </ul>
IV	Elective Papers	<ul> <li>Exposure to industrymoulds students into solution providers</li> <li>Generates Industryready graduates</li> <li>Employment opportunities enhanced</li> </ul>
V	Elective papers	<ul> <li>Self-learning is enhanced</li> <li>Application of the concept to real situation is conceived resulting in tangible outcome</li> </ul>
VI	Elective papers	<ul> <li>Enriches the studybeyond the course.</li> <li>Developing a researchframework and presenting their independent and intellectual ideaseffectively.</li> </ul>
Extra Cre For Adva	dits: nced Learners / Honors degree	To cater to the needs ofpeer learners / research aspirants
Skills acqu	uired from the Courses	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill

LIST OF PROGRAMS	60
1. Demonstrate the working of "id" and "type" functions.	
2. Find all prime numbers within a given range.	
3. Print n terms of Fibonacci series using iteration.	
4. Demonstrate use of slicing in string.	
5. Compute the frequency of the words from the input. The output should output	
after sorting thekey alphanumerically.	
6. Write a program that accepts a comma separated sequence of words as input	
and prints thewords in a comma-separated sequence after sorting them	
alphabetically.	
7. Demonstrate use of list & related functions.	
8. Demonstrate use of Dictionary & related functions.	
9. Demonstrate use of tuple & related functions.	
10. Implement stack using list.	
11. Implement queue using list.	
12. Read and write from a file.	
13. Copy a file.	
14. Demonstrate working of classes and objects.	
15. Demonstrate class method & static method.	
16. Demonstrate constructors.	
17. Demonstrate inheritance.	
18. Demonstrate aggregation/composition.	
19. Create a small GUI application for insert, update and delete in a table.	
20. Bar charts, histograms and pie charts

#### Learning Objectives:

- 1. To explain basic database concepts, applications, data models, schemas and instances.
- 2. To demonstrate the use of constraints and relational algebra operations
- 3. Describe the basics of SQL and construct queries using SQL.
- 4. To emphasize the importance of normalization in databases
- 5. To facilitate students in Database design

#### LAB EXERCISES:

#### SQL:

- 1. DDL commands.
- 2. Specifying constraints-Primary Key, Foreign Key, Unique, Check, Not Null.
- 3. DML commands.
- 4. Set Operations.
- 5. Joins.
- 6. Sub-queries.

## PL/SQL:

- 7. Control Constructs.
- 8. Exception Handlers.
- 9. Implicit Cursor.
- 10. Explicit Cursor.
- 11. Procedures.
- 12. Functions.
- 13. Triggers.
- 14. TCL Commands usage (Commit, Rollback, Savepoint)

СО	On completion of this course, students will
CO1	To demonstrate the characteristics of Database Management Systems.
CO1	To study about the concepts and models of database. To impart the concepts of System Development Life Cycle and E-R Model.
	To impart the concepts of System Development Ene Cycle and E-R wodel.
	To classify the keys and the concepts of Relational Algebra.
CO2	To impart the applications of various Normal Forms
	Classification of Dependency.
	To elaborate the different types of Functions and Joins and their applications.
CO3	Introduction of Views, Sequence, Index and Procedure.
	Representation of PL-SQL Structure.
CO4	To impart the knowledge of Sub Programs, Functions and Procedures.
	Representation of Exception and Pre-Defined Exception.
CO5	To Point out the Importance of Triggers, Implicit and Explicit Cursors.

#### Objectives

To improve efficiency and bringing important information to the surface more quickly than a system depending on human intervention, provide easy, scalable access to computing resources and IT services.

#### LIST OF PROGRAMS

1. Familiarization with Arduino/Raspberry Pi and perform necessary software installation.

2. To interface LED/Buzzer with Arduino/Raspberry Pi and write a program to turn ON LED for 1 sec after every 2 seconds.

3. To interface Push button/Digital sensor (IR/LDR) with Arduino/Raspberry Pi and write a program to turn ON LED when push button is pressed or at sensor detection.

4. To interface DHT11 sensor with Arduino/Raspberry Pi and write a program to print temperature and humidity readings.

5. To interface motor using relay with Arduino/Raspberry Pi and write a program to turn ON motor when push button is pressed.

6. To interface OLED with Arduino/Raspberry Pi and write a program to print temperature and humidity readings on it.

7. To interface Bluetooth with Arduino/Raspberry Pi and write a program to send sensor data to smart phone using Bluetooth.

8. To interface Bluetooth with Arduino/Raspberry Pi and write a program to turn LED ON/OFF when "1"/"0" is received from smart phone using Bluetooth.

9. Write a program on Arduino/Raspberry Pi to upload temperature and humidity data to thing speak cloud.

10. Write a program on Arduino/Raspberry Pi to retrieve temperature and humidity data from thing speak cloud.

11. To install MySQL database on Raspberry Pi and perform basic SQL queries.

12. Write a program on Arduino/Raspberry Pi to publish temperature data to MQTT broker.

13. Write a program on Arduino/Raspberry Pi to subscribe to MQTT broker for temperature data and print it.

14. Write a program to create TCP server on Arduino/Raspberry Pi and respond with humidity data to TCP client when requested.

15. Write a program to create UDP server on Arduino/Raspberry Pi and respond with humidity data to UDP client when requested.

Course Outcomes						
CO	On completion of this course, students will					

CO1	Design an IoT system with cloud infrastructure.
CO2	Implement the M2M Communication protocols in a prototype
CO3	Understand the basic concepts of the main sensors used in electromechanical systems
CO4	Understand/implement computer models of common engineering information types.
CO5	Understand storage mechanisms / analysis algorithms for data management in distributed & data intensive applications

TOTAL 75

СО	Course Outcomes
CO1	Demonstrate the understanding of syntax and semantics of C programs.
CO2	Identify the problem and solve using C programming techniques.
CO3	Identify suitable programming constructs for problem solving.
CO4	Analyze various concepts of C language to solve the problem in an efficient way.
CO5	Develop a C program for a given problem and test for its correctness.

Learning Objectives										
LO1	To understand the fundamentals of Cryptography									
LO2	To acquire knowledge on standard algorithms used to provide confidentiality, integrity and authenticity.									
LO3	To understand the various key distribution and management schemes.									
LO4	To understand how to deploy encryption techniques to secure data in transit across data networks									
LO5	To design security applications in the field of Information technology									
UNIT	Contents									. Of. ours
Ι	Introduction: The OSI security Architecture – Security Attacks – Security Mechanisms – Security Services – A model for network Security.12									
II	<b>Classical Encryption Techniqu</b> <b>Substitution Techniques:</b> Caesar C fair cipher – Poly Alphabetic Ci	ipher – I	Mon	oalp	habe	etic o	cipher	- Pla		12

	Stenography						
III	Plack Cinhor and DES: Plack Cinhor Dringinlag DES The Stre	nath					
111	<b>Block Cipher and DES:</b> Block Cipher Principles – DES – The Strength of DES – <b>RSA:</b> The RSA algorithm.						
IV	<b>Network Security Practices:</b> IP Security overview - IP Securitiecture – Authentication Header. <b>Web Security</b> : SecureSocket I and Transport Layer Security – Secure Electronic Transaction.		12				
V	Intruders – Malicious software – Firewalls.		12				
	TOTAL HOU	JRS	60				
	Course Outcomes	0	ramme comes				
СО	On completion of this course, students will	0					
CO1	Analyze the vulnerabilities in any computing system and hence be able to design a security solution.	PO3	, PO2, , PO4, 5, PO6				
CO2	Apply the different cryptographic operations of symmetric cryptographic algorithms	PO3	, PO2, , PO4, 5, PO6				
CO3	Apply the different cryptographic operations of public key cryptography	PO3	, PO2, , PO4, 5, PO6				
CO4	Apply the various Authentication schemes to simulate different applications.	PO3	, PO2, , PO4, 5, PO6				
CO5	Understand various Security practices and System security standards	PO3	, PO2, , PO4, 5, PO6

	ARTIFICIAL NEURAL NETWORK	Elect	4	-	-	-	3	25	75	100
	Learning Objectives: The objective of this course is to teach the basics of artificial neural networks, learning									

process, s	single layer and multi-layer perceptron networks.	
Course (	Dutcomes:	
<b>CO1:</b> Un	derstand the basics of artificial neural networks and its architecture.	
<b>CO2:</b> Un	derstand the various learning algorithms and their applications.	
CO3: Ide	entify the appropriate neural network model to a particular application.	
<b>CO4:</b> Ap	ply the selected neural network model to a particular application.	
-	alyze the performance of the selected neural network.	
Units	Contents	<b>Required Hours</b>
I	Artificial Neural Model- Activation functions- Feed forward and Feedback, Convex Sets, Convex Hull and Linear Separability, Non-Linear Separable Problem - Multilayer Networks. Learning Algorithms- Error correction - Gradient Descent Rules, Perceptron Learning Algorithm, Perceptron Convergence Theorem.	12
II	Introduction, Error correction learning, Memory-based learning, Hebbian learning, Competitive learning, Boltzmann learning, credit assignment problem, Learning with and without teacher, learning tasks, Memory and Adaptation	12
III	Single layer Perception: Introduction, Pattern Recognition, Linear classifier, Simple perception, Perception learning algorithm, Modified Perception learning algorithm, Adaptive linear combiner, Continuous perception, learning in continuous perception, Limitation of Perception.	12
IV	Multi-Layer Perceptron Networks: Introduction, MLP with 2 hidden layers, Simple layer of a MLP, Delta learning rule of the output layer, Multilayer feed forward neural network with continuous perceptions, Generalized delta learning rule, Back propagation algorithm	12
V	Deep learning- Introduction- Neuro architectures building blocks for the DL techniques, Deep Learning and Neo cognitron, Deep Convolutional Neural Networks, Recurrent Neural Networks (RNN), feature extraction, Deep Belief Networks, Restricted Boltzmann Machines, Training of DNN and Applications	12

Learning Objectives:

- To provide strong foundation on fundamental concepts in Computing Intelligence
- To apply basic principles of Artificial Intelligence and solutions that require problem solving, influence, perception, knowledge representation and learning

#### **Course Outcomes:**

**CO1:** Describe the fundamentals of artificial intelligence concepts and searching techniques.

**CO2:** Develop the fuzzy logic sets and membership function and defuzzification techniques.

**CO3:**Understand the concepts of Neural Network and analyze and apply the learning techniques

**CO4:** Understand the artificial neural networks and its applications

**CO5:** Understand the concept of Genetic Algorithm and Analyze the optimization problems using GAs.

Units	Contents	<b>Required Hours</b>
I	Introduction to AI: Problem formulation – AI Applications – Problems – State Space and Search – Production Systems – Breadth First and Depth First – Travelling Salesman Problem – Heuristic search techniques: Generate and Test – Types of Hill Climbing.	12
п	<ul> <li>Fuzzy Logic Systems:</li> <li>Notion of fuzziness – Operations on fuzzy sets – T-norms and other aggregation operators – Basics of Approximate Reasoning – Compositional Rule of Inference – Fuzzy Rule Based Systems – Schemes of Fuzzification – Inferencing – Defuzzification – Fuzzy Clustering – fuzzy rule-based classifier.</li> </ul>	12
Ш	Neural Networks: What is Neural Network, Learning rules and various activation functions, Single layer Perceptions, Back Propagation networks, Architecture of Backpropagation (BP) Networks, Back propagation Learning, Variation of Standard Back propagation Neural Network, Introduction to Associative Memory, Adaptive Resonance theory and Self Organizing Map, Recent Applications.	12
IV	Artificial Neural Networks: Fundamental Concepts – Basic Models of Artificial Neural Networks – Important Terminologies of ANNs – McCulloch-Pitts Neuron – Linear Separability – Hebb Network.	
v	Genetic Algorithm: Introduction – Biological Background – Genetic Algorithm Vs Traditional Algorithm – Basic Terminologies in Genetic Algorithm – Simple GA – General Genetic Algorithm – Operators in Genetic Algorithm.

#### Learning Objectives:

- To know the objectives of information security
- Understand the importance and application of each of confidentiality, integrity, authentication and availability
- Understand various cryptographic algorithms
- Understand the basic categories of threats to computers and networks

#### **Course Outcomes:**

**CO1:** Understand network security threats, security services, and countermeasures

**CO2:** Understand vulnerability analysis of network security

**CO3:** Acquire background on hash functions; authentication; firewalls; intrusion detection techniques.

**CO4:** Gain hands-on experience with programming and simulation techniques for security protocols.

**CO5:** Apply methods for authentication, access control, intrusion detection and prevention.

Units	Contents	<b>Required Hours</b>
I	Introduction to Information Security : Security mindset, Computer Security Concepts (CIA), Attacks, Vulnerabilities and protections, Security Goals, Security Services, Threats, Attacks, Assets, malware, program analysis and mechanisms.	12
II	The Security Problem in Computing: The meaning of computer Security, Computer Criminals, Methods of Defense. Cryptography: Concepts and Techniques: Introduction, plain text and cipher text, substitution techniques, transposition techniques, encryption and decryption	12
ш	Symmetric and Asymmetric Cryptographic Techniques: DES, AES, RSA algorithms .Authentication and Digital Signatures: Use of Cryptography for authentication, Secure Hash function, Key management – Kerberos.	12
IV	Program Security : Non-malicious Program errors – Buffer overflow, Incomplete mediation, Time-of-check to Time-of- use Errors, Viruses, Trapdoors, Salami attack, Man-in-the- middle attacks, Covert channels. File protection Mechanisms, User Authentication Designing Trusted O.S: Security polices, models of security, trusted O.S design, Assurance in trusted O.S. Implementation examples.	12
V	Security in Networks: Threats in networks, Network Security Controls – Architecture, Encryption, Content Integrity, Strong Authentication, Access Controls, Wireless Security, Honeypots, Traffic flow security. Web Security: Web security considerations, Secure Socket Layer and Transport Layer Security, Secure electronic transaction.	12

Learning Object	ives:										
• To provide the knowledge on the basic construction and use of Grid computing.											
To know an	nd understand the grid computing	ng appli	catio	ons.				-	-		

• To assess the efficiency of the grid computing in solving large scale scientific problems

#### **Course Outcomes:**

CO1:To understand the basic elements and concepts related to Grid computing

**CO2:** To identify the Grid computing toolkits and Framework.

**CO3:**To know about the concepts of Virtualization

**CO4:** To analyze the concept of service oriented architecture.

**CO5:**To Gain knowledge on grid and web service architecture.

Units	Contents	<b>Required Hours</b>
	Introduction: Early Grid Activity, Current Grid Activity, Overview of Grid Business areas, Grid Applications, Grid	

	Infrastructures.						
II	Grid Computing organization and their Roles: Organizations Developing Grid Standards, and Best Practice Guidelines, Global Grid Forum (GCF), #Organization Developing Grid Computing Toolkits and Framework#, Organization and building and using grid based solutions to solve computing, commercial organization building and Grid Based solutions.						
ш	Grid Computing Anatomy: The Grid Problem, The conceptual of virtual organizations, # Grid Architecture # and relationship to other distributed technology						
IV	The Grid Computing Road Map: Autonomic computing, Business on demand and infrastructure virtualization, Service-Oriented Architecture and Grid, #Semantic Grids#.	12					
v	Merging the Grid services Architecture with the Web Services Architecture: Service-Oriented Architecture, Web Service Architecture, #XML messages and Enveloping#, Service message description Mechanisms, Relationship between Web Services and Grid Services, Web services Interoperability and the role of the WS-I Organization.	12

LearningObjectives:(forteachers:whattheyhavetodointheclass/lab/field)											

	The major objective in introducing the Computer Skills cours training for students in Microsoft Office which has different of	-
•	MS Word, MS Excel and Power point. Thecourseishighlypracticeorientedratherthanregularclassroom	nteaching.
•	To acquire knowledge on editor, spreadsheet and presentation	n software.
Course Outcon	mes:(for students: To know what they are going to learn)	
CO1: Understa	and the basics of computer systems and its components.	
CO2: Understa	and and apply the basic concepts of a word processing package	e.
CO3: Understa	nd and apply the basic concepts of electronic spreadsheet soft	ware.
CO4: Understa	nd and apply the basic concepts of database management syst	tem.
CO5: Understa	nd and create a presentation using PowerPoint tool.	
Units	Contents	<b>Required Hour</b>
I	<b>Introductory concepts:</b> Memory unit– CPU-Input Devices: Key board, Mouse and Scanner. Output devices: Monitor, Printer. Introduction to Operating systems &its features: DOS– UNIX–Windows.	6
	Introduction to Programming Languages.	
Ш	Word Processing: Open, Save and close word document; Editing text – tools, formatting, bullets; Spell Checker - Document formatting – Paragraph alignment, indentation, headers and footers, numbering; printing–Preview, options, merge.	6
Ш	<b>Spreadsheets:</b> Excel-opening, entering extend data, formatting, navigating; Formulas–entering, handling and copying; Charts–creating, formatting and printing, analysis tables, preparation of financial statements, introduction to data analytics.	6
IV	<b>Database Concepts:</b> The concept of data base management system; Data field, records, and files, Sorting and indexing data; Searching records. Designing queries, and reports; Linking of data files; Understanding Programming environment in DBMS; Developing menu drive application sin query language (MS–Access).	6
V	<b>Power point:</b> Introduction to Power point - Features – Understanding slide typecasting & viewing slides – creating slide shows. Applying special object – including objects & pictures – Slide transition– Animation effects, audio inclusion, timers.	6

LearningObjectives:(forteachers:whattheyhavetodointheclass/lab/field)

- Toimprove the quantitative skills of the students
- Topreparethestudentsforvariouscompetitiveexams

**CourseOutcomes:**(forstudents:Toknowwhattheyaregoingtolearn)

**CO1:**To gain knowledge on LCM and HCF and its related problems

**CO2:**To get an idea of age, profit and loss related problem solving.

CO3:Able to understand time series simple and compound interests

**CO4:**Understanding the problem related to probability, and series

**CO5:**Able to understand graphs, charts

Units	Contents	<b>Required Hours</b>
I	Numbers- HCF and LCM of numbers-Decimal fractions- Simplification- Square roots and cube roots- Average- problems on Numbers	6
II	Problems on Ages - Surds and Indices - percentage - profits and loss - ratio and proportion-partnership- Chain rule.	6
III	Time and work - pipes and cisterns - Time and Distance - problems on trains -Boats and streams - simple interest - compound interest - Logarithms - Area -Volumeandsurfacearea- racesandGamesofskill.	6
IV	Permutationandcombination-probability- TrueDiscount-BankersDiscount - Height and Distances-Odd man out & Series.	
V	Calendar - Clocks - stocks and shares - Data representation - Tabulation – Bar Graphs- Piecharts- Linegraphs

	FORENSICS									

### Learning Objectives:

• To correctly define and cite appropriate instances for the application of computer forensics.

• To Correctly collect and analyze computer forensic evidence and data seizure. Identify the essential and up–to–date concepts, algorithms, protocols, tools, and methodology of Computer Forensics.

# **Course Outcomes:**

**CO1:** Understand the definition of computer forensics fundamentals.

**CO2:** Evaluate the different types of computer forensics technology.

**CO3:** Analyze various computer forensics systems.

**CO4:** Apply the methods for data recovery, evidence collection and data seizure.

**CO5:** Gain your knowledge of duplication and preservation of digital evidence.

Units	Contents	<b>Required Hours</b>

	TESTING									

Learning Objectives:

• To study various Software techniques

• To study fundamental concepts in software testing

### **Course Outcomes:**

CO1: Understand and describe the basic concepts of functional (black box) software testing.

CO2: Understand the basic application of techniques used to identify useful ideas for tests.

**CO3:** Help determine the mission and communicate the status of your testing with the rest of your project team.

**CO4:** Characterize a good bug report, peer-review the reports of your colleagues, and improve your own report writing.

**CO5:** Understand where key testing concepts apply within the context of unified processes.

Units	Contents	<b>Required Hours</b>
I	Introduction: Purpose–Productivity and Quality in Software– Testing Vs Debugging– Model for Testing– Bugs– Types of Bugs – Testing and Design Style.	6
II	Flow / Graphs and Path Testing – Achievable paths – Path instrumentation – Application– Transaction Flow Testing Techniques	
III	Data Flow Testing Strategies - Domain Testing:	6

	Domains and Paths – Domains and Interface						
	Testing.						
IV	Linguistic–Metrics – Structural Metric – Path Products and Path Expressions. Syntax Testing– Formats–Test Cases.	6

Learning Objectives: (forteachers: what they have to do in the class/lab/field)

• Understand the concept of ERP and the ERP model; define key terms; identify the levels of ERP maturity.

- To integrate business processes; define and analyze a process; create a process map and improve and/or simplify the process; apply the result to an ERP implementation.
- To know the elements of a value chain, and explain how core processes relate; identify how the organizational infrastructure supports core business processes; explain the effect of a new product launch on the three core business processes

Course Outcomes:(forstudents:Toknowwhattheyaregoingtolearn) CO1: Understand the basic concepts of ERP. CO2: Identify different technologies used in ERP CO3:Understand and apply the concepts of ERP Manufacturing Perspective and ERP Modules CO4: Discuss the benefits of ERP CO5:Apply different tools used in ERP

Units	Contents	<b>Required Hours</b>
Ι	ERP Introduction, Benefits, Origin, Evolution and Structure:	6

	Conceptual Model of ERP, the Evolution of ERP, the	
	Structure of ERP, Components and needs of ERP, ERP	
	Vendors; Benefits & Limitations of ERP Packages.	
II	Need to focus on Enterprise Integration/ERP; Information mapping; Role of common shared Enterprise database; System Integration, Logical vs. Physical System Integration, Benefits & limitations of System Integration.	6
III	ERP Marketplace and Marketplace Dynamics: Market Overview, Marketplace Dynamics, the Changing ERP Market. ERP- Func-tional Modules: Introduction, Functional Modules of ERP Software, Integration of ERP, Supply chain.	
IV	ERP Implementation Basics, , ERP implementation Strategy, ERP Implementation Life Cycle ,Pre- Implementation task,Role of SDLC/SSAD, Object Oriented Architecture, Consultants, Vendors and Employees.	6
V	ERP & E-Commerce, Future Directives- in ERP, ERP and Internet, Critical success and failure factors, Integrating ERP into or-ganizational culture. Using ERP tool: either SAP or ORACLE format to case study.

LearningObjectives: (forteachers: what they have to do in the class/lab/field)

- To make the students familiar with the various drive systems of robots, sensors and their applications in robots
- To introduce the parts of robots, basic working concepts and types of robots

**Course Outcomes:** (forstudents:Toknowwhattheyaregoingtolearn)

**CO1:**Describe the different physical forms of robot architectures

**CO2:** Kinematically model simple manipulator and mobile robots

**CO3:** Mathematically describe a kinematic robot system.

**CO4:** Analyze manipulation and navigation problems using knowledge of coordinate frames, kinematics, optimization, control, and uncertainty.

**CO5:** Program robotics algorithms related to kinematics, control, optimization, and uncertainty.

Units	Contents	<b>Required Hours</b>
I	Introduction: Introduction, brief history, components of robotics, classification, workspace, work-envelop, motion of robotic arm, end-effectors and its types, service robot and its application, Artificial Intelligence in Robotics.	6
II	Actuators and sensors :Types of actuators, stepper-DC- servo-and brushless motors- model of a DC servo motor- types of transmissions-purpose of sensor-internal and external sensor-common sensors-encoders tachometers	6
III	Localization: Self-localizations and mapping - Challenges in localizations – IR based localizations – vision based	

	localizations – Ultrasonic based localizations - GPS localization systems.	
IV	Path Planning :Introduction, path planning-overview-road map path planning-cell decomposition path planning potential field path planning-obstacle avoidance-case studies	6
V	Application: Ariel robots-collision avoidance robots for agriculture-mining-exploration-underwater-civilian- and military applications- nuclear applications-space applications	6

	Course Outcomes	Programme	Outcon	ne			
<u> </u>	On completion of this course, students will Acquire and understand the basic concepts in Java, application of OOPS concepts.	Po1					
2	Acquire knowledge about operators and decision-making statements.	Po1,Po2					
3	Identify the significance and application of Classes, arrays and interfaces and analyzing java arrays	Po4,Po6	Po4,Po6				
4	Understand about the applications of OOPS concepts and analyze overriding and packages through java programs.	Po4,Po5,Po6					
5	Create window-based programming using applet and graphics programming.	Po3,Po8

SKILL ENHANCEMEN T COURSE	Web Technology	SEC	2	-	-	-	2	2	25	75	100	

LearningObjectives: (forteachers: what they have to do in the class/lab/field)

• To learn the basic web concepts and to create rich internet applications that use most recent clientside programming technologies.

• To learn the basics of HTML, DHTML, XML, CSS, Java Script and AJAX.

**Course Outcomes:**(forstudents:Toknowwhattheyaregoingtolearn)

**CO1:** Ability to Develop and publish Web pages using Hypertext Markup Language(HTML).

**CO2:** Ability to optimize page styles and layout with Cascading Style Sheets(CSS).

**CO3:** Ability to Understand, analyze and apply the role of languages to create acapstone

**CO4:** Website using client-side web programming languages like HTML, DHTML, CSS, XML, JavaScript, and AJAX

**CO5:** Able to understand the concept of jQuery and AngularJS

Units	Contents	Required Hours
I	HTML: HTML-Introduction-tag basics- page structure-adding comments working with texts, paragraphs and line break. Emphasizing test- heading and horizontal rules-list-font size, face and color-alignment- links-tables- frames	6
II	Forms & Images Using Html: Graphics: Introduction-How to work efficiently with images in web pages, image maps, GIF animation, adding multimedia, data collection with html forms textbox, password, list box, combo box, text area, tools for building web page front page	6
III	XML & DHTML: Cascading style sheet (CSS)-what is CSS-Why we use CSS- adding CSS to your web pages-Grouping styles-extensible markup language (XML).	6
IV	JavaScript: Client side scripting, What is JavaScript, How to develop JavaScript, simple JavaScript, variables, functions, conditions, loops and repetition.	6
V	Ajax: Introduction, advantages & disadvantages, Purpose of it, ajax based web application, alternatives of ajax Java Script & AJAX: Introduction to array- operators, making statements-date & time-mathematics- strings-Event handling- form properties. AJAX. Introduction to jQuery and AngularJS	6
