M.Sc. STATISTICS

(Semester Pattern)

(Under Choice Based Credit System)

(For Periyar University Department)

Regulations and Syllabus

(Candidates admitted from 2026-27 onwards)

Tamil Nadu State Council for Higher Education
Chennai – 600 005

PERIYAR UNIVERSITY

PREAMBLE

Vision

- Periyar University aims towards excellence in education, research, promoting invention, innovation and preserving cultural identity for future generation.

Mission

- Provide a vibrant learning environment, fostering innovation and creativity inspired by cutting edge research.
- Aspire to be a national leader in developing educated contributors, career ready learners and global citizens.
- Provide well equipped facilities for teaching, research, administration and student life.
- Have well defined autonomous governance structure.
- To make a significant, consistent and sustainable contribution towards social, cultural and economic life in Tamil Nadu, India.

Values

- Motivation of students to be responsible citizens making them aware of their societal role.
- Inculcate scientific temper, honesty, integrity, transparency, empathy and ethical values amidst students.
- Impart a desire for lifelong learning to foster patriotic sensibility, accountability and holistic well being.
- Provide conducive and cosmopolitan environment for innovation and free thinking.
- Imbibe value-based education leading to inclusive growth.

Goals

- Become a global leader in teaching, research, invention and innovation.
- Make significant contribution to advancement of knowledge through quality teaching and innovative research.
- Produce graduates possessing creativity and reflective thoughts, strong analytical skills and a passion for learning.
- Be a part in social and economic upliftment of society to infuse sense of social and national responsibility among students.

DEPARTMENT OF STATISTICS

Vision

- To centre stage statistical knowledge in the curriculum in-still analytical and logical thinking among students and promote statistical thought as an important area of human thought.

Mission

- To encourage students to conduct student projects to develop their analytical and logical thinking.
- To establish industry links to develop statistical models and help the industry.
- To conduct outreach programmes for the socially marginalized students.
- The department creates an environment where the faculty and continue to grow as teachers and scholars, while providing public and professional service.

The Process for Defining Vision and Mission of the Department

The following steps are followed to establish Vision and Mission for the Department of Statistics;

Step 1: The Vision and Mission of the Periyar University is taken as the basis.

Step 2: The Department conducts brain-storming sessions with the faculty members on the skill-set required by the local and global employers, Industry Advances in Technology and R and D, and the draft copy of the Vision and Mission of the Department is drafted.

Step 3: The views from stake holders, Industrial Experts and Board of Studies (BoS) on the draft are also collected and incorporated to revise the draft version based on their inputs.

Step 4: The accepted views are analyzed and reviewed to check the consistency with the vision and mission of the institute.

M.Sc. - Statistics

1. Course Objectives

- The course aims to inculcate knowledge on theoretical and applied aspects of Statistics in a wider spectrum. It intends to impart awareness on the importance of Statistical concepts across diversified fields and to provide practical training on the applications of Statistical tools in carrying out data analysis using Statistical software like SAS, SYSTAT, Python, SPSS and using the programming knowledge in R.
- The course curriculum is designed in such a way that the candidate on successful completion of the course will have ample opportunities to take up national level competitive examinations like CSIR NET in Mathematical Sciences, SET, Indian Statistical Service (ISS) of UPSC, etc.
- Demonstrate the ability to use Statistics skills for formulating and tackling real world problems.
- Recognize the importance of Statistical modelling and computing in the field of Statistics.
- Plan and execute Statistical experiments or investigations, analyze and interpret data/information collected using appropriate methods, including the use of appropriate statistical software including programming languages, and report accurately the findings of the experiment/investigations with the medical data set.
- Develop Problem-solving skills that are required to solve different types of Statistics related problems with well-defined solutions. Investigative skills, including skills of independent thinking of Statistics-related issues and problems
- Develop analytical skills involving paying attention to detail and ability to construct logical arguments using correct technical language related to Statistics and ability to translate them with popular language when needed; Develop ICT skills.
- To transform graduates with sufficient strength in statistics so as to be employed in the industry, Research and development and academic sides. The course is designed to impact professional knowledge and practical skills to the students.

2. Conditions for Admission

- Candidates who have passed a Bachelor’s Degree and have studied at least three courses of one-year duration each, or six courses of one-semester duration each, in Statistics under the 10+2+3 scheme of examination, with a minimum of 50% marks in aggregate or an equivalent CGPA from a recognized Institute/University, are eligible.
- Candidates who have passed Bachelor's degree in Mathematics with at least one paper in Statistics under 10+2+3 scheme of examination with the minimum 50% marks in aggregate or equivalent CGPA from a recognized Institute/ University are eligible.

3. Duration of the Course

- It consists of two academic years divided into four semesters. Each semester consists of 90 working days.

4. Scheme of Examinations

- As per the CBCS pattern with SE (Secured External) Examinations score and IA (Internal Assessment) score.

5. Career Prospects

Statistician jobs can be found in government and semi-government institutes in the public and private sectors and in factories. Statistics jobs can include teaching in research institutions and establishments dedicated to higher education. Statistics career has excellent potential. Some of the job options are mentioned below:

5.1 Government Sector

Central Government Jobs	State Government Jobs
Indian Statistical Service (ISS)	Assistant Statistical Invigilator
Senior Scientist, (CSRT)	Statistical Inspector
Scientist, (Indian Council of Medical Research)	Assistant Director (Eco. and Stat. Dept.)
Statistical Invigilator	Director/ Joint Director
Research Officer	Block Health Statistician
NSSO	Research and Scientific Officer
CSO	College/ University Professor

5.2 Private Sectors

Statistician, Data Analyst, Data Scientist, Risk Analyst, Biostatistician, Research Analyst, Scientist, etc.

5.3 Future Scope

After pursuing a Master of Statistics, candidates can go for further education in Ph.D. Statistics.

6. M.Sc. Statistics Curriculum Design

Semester-I	Credit	Hours	Semester-II	Credit	Hours	Semester-III	Credit	Hours	Semester–IV	Credit	Hours
1.1 Core-I	4	5	2.1 Core-IV	4	5	3.1 Core-VII	4	4	4.1 Core-XI	4	5
1.2 Core-II	4	5	2.2 Core-V	4	5	3.2 Core-VIII	4	4	4.2 Core-XII	4	5
1.3 Core-III	4	5	2.3 Core-VI	4	5	3.3 Core – IX	4	4	4.3 Statistics Practical – IV	2	4
1.4 Discipline Centric Elective -I	3	5	2.4 Discipline Centric Elective-III	3	3	3.4 Core – X	4	4	4.4 Project with Viva Voce	7	12
1.5 Generic Elective-II	3	4	2.5 Generic Elective-IV	3	3	3.5 Discipline Centric Elective - V	3	4	4.5 Elective - VI (Industry / Entrepreneurship) 20% Theory 80% Practical	2	4
1.6 Statistics Practical-I	2	4	2.6 Statistics Practical-II	2	4	3.6 Statistics Practical – III	2	4	4.6 Extension Activity	1	-
1.7- SQL	1	2	2.7 Tabalue and Power BI	1	2	3.7 Peace Education	2	2	-	-	-
			2.8 NME I (MOOC/SWAYAM) -	2	1	3.8 NME II	4	4			
-	-	-	2.9 Human Rights	2	2	3.9 Internship / Industrial Activity	2	-	-	-	-
Total	**21**	**30**	**-**	**25**	**30**	**-**	**29**	**30**	**-**	**20**	**30**

Total Credit Points – 90+2+2+1= 95

(Core- 90 Credits, NME-1 – (MOOC/ Swayam –)- 2 Credits, Peace Education **– 2 Credits, Extension Activity – 1 Credit)**

7. Course Structure

Semester	Sl. No.	Course Code	Title of the Course	Credit	Contact Hrs. per Week	Int. Marks	Ext. Marks	Tot. Marks

	2	26UPSTA1V02	Statistics for Researchers	3				
	3	26UPSTA1V03	Computer Oriented Statistical Methods	3				

* Practical examinations should be conducted at end of the respective semester
** If a candidate select any one course in third semester for reappear (RA) of MOOC/SWAYAM online course.

8. Programme Outcomes (PO) and Programme Specific Outcomes (PSO)

Programme Outcomes (POS)	**PO1: Disciplinary Knowledge:** a good theoretical knowledge of the domain Statistics and its methods and techniques. **PO2: Mathematical knowledge:** sharpening mathematical knowledge needed to understand higher levels of Statistics understand multidimensional issues of data. **PO3: Application knowledge:** understanding application of Statistics in various domain. Also understand the interdisciplinary nature of Statistics while applying it. Industrial oriented programming languages are introducing to undertake and solve practical problem in industry. **PO4: Critical Thinking:** examine basic statistical issues in a more logical and methodical manner in a real data given. **PO5: Analytical Reasoning:** to develop capability to identify logical issues in practicing with data, analyze and synthesize data from a variety of sources and accordingly drawconclusions. To acquire capacity for taking central and state government comparative examination (UGC NET, SET, SLET, TNPSC, SSC, TRB, RBI, UPSC, ISS/IES, ICMR, ICAR etc.) **PO6: Problem Solving skills:** The students will be able to examine various hypotheses involved, and will be able to identify and consult relevant resources to find their rational answers. Also get mathematical problem solving.

	PO7: Research Related Skills: The students should be able to develop original thinking for formulating new problems and providing their solutions. **PO8: Computational skills:** acquire computing skills necessary for solving real life problems in par with the requirement of a job **PO 9 Team work:** experience in team work by engaging in team projects and team assignments. Also have original thinking and creative presentation **PO 10: Communication and soft skills:** Interactive skills and presentation skills

Programme Specific Outcomes (PSOs)	**PSO1 – Placement:** To prepare the students who will demonstrate respectful engagement with others' ideas, behaviors, beliefs and apply diverse frames of reference to decisions and actions. **PSO2 – Entrepreneur:** To create effective entrepreneurs by enhancing their critical thinking, problem solving, decision making and leadership skill that will facilitate startups and high potential organizations. **PSO3 – Research and Development:** Design and implement HR systems and practices grounded in research that comply with employment laws, leading the organization towards growth and development. **PSO4 – Contribution to Business World:** To produce employable, ethical and innovative professionals to sustain in the dynamic business world. **PSO 5 – Contribution to the Society:** To contribute to the development of the society by collaborating with stakeholders for mutual benefit.

Cognitive Domain

(Lower levels: K1: Remembering; K2: Understanding; K3: Applying; Higher levels: K4: Analysing ; K5: Evaluating; K6: Creating)

9. Credit Distribution for M.Sc. Statistics

First Year

Semester I

	Courses	Credit	Hours per Week (L/T/P)
Part A	Core Courses 3 (CC1, CC2, CC3)	12	16
	Elective Courses 2(Generic / Discipline Specific) EC1, EC2	06	10
Part B	Skill Enhancement Course -SEC 1 - Statistics Practical-I	02	04
	Total	**20**	**30**

Semester-II

	Courses	Credit	Hours per Week (L/T/P)
Part A	Core Courses 3 (CC4, CC5, CC6)	12	15
	Elective Course 2 (Generic / Discipline Specific) EC3, EC4	06	07
Part B	Skill Enhancement Course -SEC 2 – Statistics Practical - II	02	04
Part C	Non-Major Elective 1 (MOOC/SWAYAM)	02	02
	Fundamentals of Human Rights	02	02
	Total	**24**	**30**

Second Year

Semester - III

	Courses	Credit	Hours per Week(L/T/P)
Part A	Core Courses 4 (CC7, CC8, CC9, CC10)	16	18
	Elective Course 1 (Generic / Discipline Specific) EC-5	03	04
Part B	Skill Enhancement Course -SEC 3 – Statistics Practical - III	02	04
Part C	Non-Major Elective 2	04	04
	Internship / Industrial Activity (Carried out in Summer Vacation at the end of I year – 30 hours)	02	-
	Total	**27**	**30**

Semester-IV

Part	Courses	Credit	Hours per Week(L/T/P)
Part A	Core Courses 2 (CC11, CC12)	8	10
	Elective Course 1 (Generic / Discipline Specific) EC-6 (20% Theory and 80% Practical)	02	04
	Project Report and Viva-voce	07	12
Part B	Skill Enhancement Course-SEC- Statistics Practical-IV	02	04
Part C	Extension Activity	01	-

	(Can be carried out from Sem II to Sem IV)		
	Total	**20**	**30**

Part A and Part B component will be taken into account for CGPA calculation for the postgraduate programme and the other components Part B and Part C have to be completed during the duration of the programme as per the norms, to be eligible for obtaining the PG degree.

M.Sc. Statistics

	First Year Semester- I	**Credit**	**Hours per Week (L/T/P)**
Part A	CC1 - Real Analysis and Linear Algebra	04	05 (4L+1T)
	CC2 - Sampling Methods	04	05 (4L+1T)
	CC3 - Distribution Theory	04	06 (5L+1T)
	Elective I (Generic / Discipline Specific) (One from Group A)	03	05 (3L+2T)
	Elective II (Generic / Discipline Specific) (One from Group B)	03	05 (3L+2T)

	(iii) Summer Internship	**2**	**1**		
	(iv) Extension Activity	**1**	**1**	**1**	
	Total Credits			**91**	

Marks and Grades

The following table gives the marks, grade points, letter grades and classification to indicate the performance of the candidate.

Range of Marks	Grade Points	Letter Grade	Description
90-100	9.0-10.0	O	Outstanding
80-89	8.0-8.9	D+	Excellent
75-79	7.5-7.9	D	Distinction
70-74	7.0-7.4	A+	Very Good
60-69	6.0-6.9	A	Good
50-59	5.0-5.9	B	Average

00-49	0.0-4.9	U	Re-appear
Absent	**0.0**	**AAA**	**Absent**

C_i = Credits earned for course *i* in any semester.

G_i = Grade point obtained for course *i* in any semester

n = Refers to the semester in which such courses were credited.

a. Semester:

GRADE POINT AVERAGE (GPA)

$$GPA = \frac{\text{Sum of the multiplication of grade points by the credits of the courses}}{\text{Sum of the credits of the courses in a semester}}$$

GPA	***GRADE***	***CLASSIFICATION OF FINAL RESULT***
9.5 - 10.0	O+	First class with Exemplary*
9 and above but below 9.5	O	
8.5 and above but below 9.0	D++	First class with Distinction*
8.0 and above but below 8.5	D+	
7.5 and above but below 8.0	D	
7.0 and above but below 7.5	A++	First Class
6.5and above but below 7.0	A+	
6.0 and above but below 6.5	A	
5.5 and above but below 6.0	B+	Second class
5.0 and above but below 5.5	B	
0.0 and above but below 5.0	***U***	Re-appear

CUMULATIVE GRADE POINT AVERAGE (CGPA)

$$CGPA = \frac{\text{Sum of the multiplication of grade points by the credits of the entire programme}}{\text{Sum of the credits of the courses of the entire programme}}$$

CGPA	***GRADE***	***CLASSIFICATION OF FINAL RESULT***
9.5 - 10.0	O+	First class with Exemplary*
9 and above but below 9.5	O	
8.5 and above but below 9.0	D++	First class with Distinction*
8.0 and above but below 8.5	D+	
7.5 and above but below 8.0	D	
7.0 and above but below 7.5	A++	First Class
6.5and above but below 7.0	A+	
6.0 and above but below 6.5	A	
5.5 and above but below 6.0	B+	Second class
5.0 and above but below 5.5	B	

0.0 and above but below 5.0	***U***	Re-appear

**** The candidates who have passed in the first appearance and within the prescribed semester of the PG Programme (Core, Elective, Non-major Electives and Extra-Disciplinary courses alone) are eligible***

CORE COURSES - CC

B	IV	1	Bayesian Inference (Discipline Specific)
	V	2	Clinical Trials (Generic Specific)
	VI	3	Statistical Analysis using R Programming (Generic Specific)
C	VII	1	Actuarial Statistics (Discipline Specific)
	VIII	2	Simulation Analysis (Discipline Specific)
	IX	3	Total Quality Management(Generic Specific)
D	X	1	Survival Analysis (Computer/IT related)
	XI	2	Econometrics (Computer/IT related)
	XII	3	Statistical Computation using Python (Computer/IT related)
E	XIII	1	Operations Research (Discipline Specific)
	XIV	2	Database Management System (Discipline Specific)
	XV	3	Research Methodology in Statistics (Generic Specific)
F	XVI	1	Non - Parametric Inference (Industry)
	XVII	2	Reliability Theory (Industry)
	XVIII	3	Applied Regression Analysis (Entrepreneurship)

Semester I: Elective I to be chosen from Group A and Elective II to be chosen from Group B

Semester II: Elective III to be chosen from Group C and Elective IV to be chosen from

Group D

Semester III: Elective V to be chosen from Group E

Semester IV: Elective VI to be chosen from Group F

Skill Enhancement Courses SEC: Group G (Skill Enhancement Courses)

S. No.	Course No.	Title of the Course
1	I	Statistics Practical – I
2	II	Statistics Practical – II
3	III	Statistics Practical – III
4	IV	Statistics Practical –IV

Non-Major Elective Courses for other Departments (not for Statistics students) EDC

Students from other Departments may also choose any one of the following as Extra Disciplinary Course.

Semester	S. No.	Title of the Course
II	**Non- Major Elective – I**	
	1	Non-Major Elective 1 (MOOC/SWAYAM) (26UPSTA1N01)
	Non- Major Elective – II	
III	1	Basic Statistical Methods (26UPSTA1N02)
	2	Statistics for Behavioural Sciences (26UPSTA1N03)
	3	Probability and Statistics for Scientists (26UPSTA1N04)
	4	Statistics Data Analysis using R (26UPSTA1N05)

10. EXAMINATION PATTERN

For Theory papers: 100 marks

Internal 25 marks and External 75 marks

For Practical papers: 100 marks

Internal 40 marks and External 60 marks

Internal Assessment

Theory Course: For theory courses there shall be three tests conducted by the faculty concerned and the average of the best two can be taken as the Continuous Internal Assessment (CIA) for a maximum of 25 marks. The duration of each test shall be one and a half hour.

Practical Courses: For Practical oriented courses, there shall be two tests in Theory part and two tests in Laboratory part. Choose one best from Theory part and other best from the two Laboratory part. The average of the best two can be treated as the CIA for a maximum of 40 marks. The duration of each test shall be one / one and a half hour. There is no improvement for CIA of both theory and laboratory, and, also for University End Semester Examinations.

Question Paper Pattern

Theory Papers

Marks for Internal: (Max. Marks: 25)

Internal marks distribution:			
1.	Cycle test and model Exam	:	10 marks
2.	Assignment	:	05 marks
3.	Attendance	:	05 marks
4.	Seminar	:	05 marks
5.	**Total**	**:**	**25 marks**

Marks for External: (Max.Marks:75)

Intended Learning Skills Memory Recall / Example/ Counter Example / Knowledge about the Concepts/ Understanding	**Maximum 75 Marks** **Passing Minimum: 50%** **Duration: Three Hours**
	Part –A (20 x 1 = 20 Marks) Answer **ALL** questions Each Question carries 1 Marks
	Four questions from each UNIT
	Question 1 to Question 20
Descriptions/ Application (problems)	**Part – B (3 x 5 = 15 Marks)** Answer **any three** questions (Open choice) Each questions carries 5 Marks
	ONE questions from each UNIT
	Question 21 to 25
Analysis /Synthesis / Evaluation	**Part-C (5X8=40 Marks)** Answer **ALL** questions (internal choice) Both parts of each question from the same UNIT Each question carries 8 Marks
	Question 26 (a) or 26(b) **to** **Question 30(a) or 30(b)**

Practical Courses / Skill Enhancement Courses

TIME: 3 Hours, Maximum Marks: 100 marks (40(IA) + 60(EX))			
Internal marks distribution:			
	Model Exam	:	10 marks
	Record work	:	25 marks
	Attendance	:	05 marks

	Total	**:**	**40 marks**

Question pattern for Practical / SEC

Five questions are to be set with open choice. All question carries equal marks.

Time: 3hrs		**Maximum marks: 60**	
Part – A (3 x 20 = 60) Answer **ANY THREE** questions (Open Choice)			
External marks distribution:			
	Writing/Executing Programme (3X10)	:	30 marks
	Correctness of output (3 X5)	:	15 marks
	Presentation of Result (3X5)	**:**	15 marks
	Total	:	**60 marks**

Project work: Maximum Marks: 100 (Internal- 40, External - 60)

Project and Viva-Voce marks distribution		
S. No.	**Criteria**	**Marks**
1.	Project Report and Documentation	40
2.	Presentation and Viva-Voce Examination	20
	Total	60

Project work: IA: 40 marks (1st Review – 15 marks, 2nd Review -20 marks and Attendance mark – 5 Marks) and End Semester: 60 marks.

11 SYLLABUS

11.1 Syllabus for Core Courses

<table>
<tr><td colspan="8">11.1.1 Real Analysis and Linear Algebra</td></tr>
<tr><td colspan="2">Title of the Course</td><td colspan="6">Real Analysis and Linear Algebra</td></tr>
<tr><td colspan="2">Paper Number</td><td colspan="6">Core I</td></tr>
<tr><td rowspan="2">Category</td><td rowspan="2">Core</td><td>Year</td><td>I</td><td rowspan="2">Credits</td><td rowspan="2">4</td><td rowspan="2">CourseCode</td><td rowspan="2">26UPSTA1C01</td></tr>

Website and e-Learning Source	e-books, tutorials on MOOC/SWAYAM courses on the subject

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Understand the concepts of metric spaces, open and closed sets, compactness, continuity, uniform continuity, and important theorems in analysis.

CLO 2: Apply differentiation and integration techniques, including Mean Value Theorems, Taylor's theorem, Riemann and Riemann–Stieltjes integrals, to solve mathematical problems. Analyze functions of several variables using partial derivatives, total derivatives, maxima and minima, and saddle point concepts.

CLO 3: Compute eigenvalues, eigenvectors, characteristic polynomials, minimal polynomials, and apply the Cayley–Hamilton theorem in matrix analysis.
CLO 4: Examine quadratic forms, matrix congruence, canonical forms, and classify real quadratic forms using Sylvester's law of inertia.
CLO 5: Understand the structure of vector spaces, linear dependence and independence, basis and dimension, and linear transformations. Apply inner product space concepts and perform orthogonalization using the Gram–Schmidt process.

11.1.2 Sampling Methods

Title of the Course		**Sampling Methods**					
Paper Number		**Core II**					
Category	**Core**	**Year**	I	**Credits**	4	**Course Code**	**26UPSTA1C02**
		Semester	I				
Instructional Hours per week		**Lecture**		**Tutorial**	**Lab Practice**		**Total**
		4		1	--		5
Pre-requisite		Undergraduate Statistical Inference					
Objectives of the Course		1. To cover sampling design and analysis methods 2. To explain and compare various sampling procedures. 3. To understand the concepts of bias and sampling variability and strategies for reducingthe bias and sampling variability.					
Course Outline		**UNIT I:** Preliminaries – Need for Sampling – The Principal Advantages of Sampling – The Principal Steps in a sample surveys – Limitations Sampling - Simple Random Sampling – The Sample Mean – Variance					

	of SRS - PPS selection methods.
	UNIT II: Midzuno sampling method – PPSWR and PPSWOR sampling methods – Ordered andUnordered estimators
	UNIT III: Stratified Sampling – Allocation Problems – Systematic Sampling Methods – Balanced, Modified and Centered systematic sampling methods – Yates corrected estimator.
	UNIT IV: Ratio Estimation – Unbiased Ratio Type estimators – Regression Estimation - Double Sampling for Ratio and Regression Estimation
	UNIT V: Multistage Sampling - Randomized Response Methods – Call Back Techniques
Extended Professional Component (is a part of internal component only, not to be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC / applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. (To be discussed during the Tutorial hour)
Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text	1. S.Sampath (2005):Sampling Theory and Methods, Narosha Publishing House. 2. W.G. Cochran (1965):Sampling Techniques, Wiley and Sons.

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.
Extended Professional Component (is a part of Internal component only, Not to be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC / others to be solved (To be discussed during the Tutorial hour)

Course Learning Outcome (for Mapping with POs and PSOs)
Students will be able to

1. To apply basics and advanced levels of sampling methods for different types of data.
2. To draw a conclusion about the best sampling procedure.

3. To use practical applications of ratio and regression method of estimations.
4. To analyze data from multi-stage sampling methods.
5. To estimate the hidden responses using randomized response techniques.

11.1.3 Distribution Theory								
Title of the Course		**Distribution Theory**						
Paper Number		**Core III**						
Category	**Core**	**Year**	I	**Credits**	4	**Course Code**	**26UPSTA1C03**	
		Semester	I					
Instructional Hours per week		**Lecture**		**Tutorial**	**Lab Practice**		**Total**	
		4		1	--		5	
Pre-requisite		Undergraduate level Mathematics.						
Objectives of the Course		1. To provide theoretical knowledge on the concept of functions of random variables andits usage. 2. To educate the knowledge on the both discrete and continuous distributions. 3. To acquire the knowledge on deriving its characteristics of distributions.						
Course Outline		**Unit I:** Brief review of distribution theory - Joint, Marginal and Conditional Mass and Density Functions - Functions of Random Variables - Methods of Finding Distributions: Cumulative Distribution Function - Jacobian Transformation - Standard Distributions - Binomial – Poisson - Multinomial and Normal Distributions.						
		Unit II: Bivariate Binomial, Poisson, Normal Distribution – Compound and Truncated Distributions of Binomial, Poisson and Normal distributions.						
		Unit III: Sampling distributions - Sampling Distributions – Central – *t*, Central – *F*, Central Chi – Square Distributions – Properties and Relationships - Non-central chi-square distribution, *t* and *F* distributions.						
		Unit IV: Distributions of Laplace - Cauchy - Lognormal - Gamma, Beta, Geometric - Hyper Geometric - Negative Binomial. Logarithmic series - Power Series - Properties and Relationships - Distributions of Quadratic Forms– Cochran's - James theory.						
		Unit V: Introduction of Order Statistics – Distribution Function of Range – Properties - Extreme Value Distribution – Delta Method - Kolmogorov Smirnov distributions - Exponential - Weibull Distributions.						

Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. To understand the knowledge on importance of the random variables and its role in the distribution theory.
2. To interpret the properties of special univariate continuous distributions, truncated normal distribution and few non-central distributions.
3. To explain the moments for the data come from the univariate and bivariate distributions.
4. To interpret the distributions of order statistics with regard to Median, Sample Range and Joint distribution of order two.
5. To identify the data distribution based on One sample and two samples using KS tests.

11.1.4 Estimation Theory							
Title of the Course	**Estimation Theory**						
Paper Number	**Core IV**						
Category	**Core**	**Year**	I	**Credits**	4	**Course Code**	**26UPSTA1C04**
		Semester	II				
Instructional Hours per week	**Lecture**		**Tutorial**		**Lab Practice**	**Total**	
	4		1		--	5	
Pre-requisite	Probability Theory						
Objectives of the Course	1. To make the students to understand the basic concepts of the statistical estimationtheory. 2. To study the properties of ideal estimators like unbiasedness, consistency, sufficiency,completeness. 3. To educate various estimation methods like method of moments, method of maximumlikelihood, interval estimate, and Bayes estimate.						

Course Outline	**Unit I:** Introduction of Point Estimation - Minimum Mean Square Error Criterion – Sufficient Statistics - Neyman Factorization Theorem - Minimal Sufficient Statistics - Exponential Family of Distributions - Complete Statistics.
	Unit II: Unbiased Estimation - Minimum Variance Unbiased Estimation Uniformly Minimum Variance Unbiased Estimator - Locally Minimum VarianceUnbiased Estimators - Rao Blackwell – Theorem - Lehmann Scheffe Theorems -Necessary and Sufficient Condition for Unbiased Estimators.
	Unit III: Lower Bounds for Variance of Unbiased Estimator - Cramer-Rao Inequality - Bhattacharya Inequality - Chapman-Robbins inequality Fisher's Information Measure and Matrix – Simultaneous in Parameters of Univariate Normal Distribution.
	Unit IV: Methods of Estimation – Method of Moments – Method of Maximum Likelihood Estimators – Asymptotic Efficiency of Maximum Likelihood Estimators - Method of Minimum Chi Square - Method of Modified Minimum Chi- Square Estimators – Method of Least Squares.
	Unit V: Interval estimation – Confidence Co-Efficient and Confidence Interval - General Method of Constructing Confidence Interval – Construction of Shortest Average Width Confidence Intervals – Construction of Confidence Intervals in Large Samples and Small Samples for Mean, Variance of a Normal Population - Difference Between Mean and Ratio of two Normal Populations – Construction of Most Accurate Confidence Intervals.
Extended Professional Component (is a part of internal component only, Not to be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC / others to be solved (To be discussed during the Tutorial hour)
Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text	1. V.K. Rohatgi et.al.(2002) : An introduction to probability and statistics, John Wiley. 2. Lehmann, E.L. (1983): Theory of point estimation, John Wiley. 3. M. Rajagopalan and P. Dhanavanthan (2012): Statistical Inference, PHI Learning Pvt Ltd, New Delhi.

(1965): Introduction to probability and statistics, Part 2, Inference,Cambridge University Press.
Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for thissubject.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. To understand the consistency, sufficiency and unbiasedness.
2. To understand the concepts and drive the uniformly minimum variance unbiased estimators.
3. To derive the inequality including CR inequality, KCR inequality and Bhattacharya inequality.
4. To estimate the parameter using method of moments, method of MLE, Interval estimation and shortest with confidence intervals.
5. To learn the concepts and to apply simple numerical illustration for Loss function, Risk function and Bayes estimate.

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for thissubject.

Course Learning Outcome (for Mapping with POs and PSOs)
Students will be able to

1. Resolve problems that occur in the sequences of sets and classes of sets.
2. Provide critical thinking in Integrals and their application to Probability Theory.
3. Evaluate, integrate, and apply appropriate tools in Probability and ConditionalProbability.
4. Demonstrate the ability to apply basic methods in analyzing the convergence inProbability and rth mean and in Distribution and Characteristics functions.
5. Demonstrate critical thinking skills, such as problem solving using weak andstrong law of large numbers and different forms of Central Limit Theorems.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. Structuring the time series data based on seasonal and non-seasonal nature.
2. Identifying the sationarity of the time series
3. Modelling time series using exponential methods and Box-Jenkings model
4. Fitting time series model and evaluating goodness of fit

11.1.10 Statistical Quality Control							
Title of the Course	**Statistical Quality Control**						
Paper Number	**Core X**						
Category	**Core**	**Year**	II	**Credits**	4	**Course Code**	**26UPSTA1C10**
		Semester	III				
Instructional Hours per week	**Lecture**		**Tutorial**		**Lab Practice**	**Total**	
	4		1		--	5	
Pre-requisite	Basics in Probability distributions, sampling, testing of hypotheses, control charts and inspection sampling plans.						
Objectives of the Course	1. Understand the application of statistics in industrial environment. 2. Acquire knowhow on manufacturing process changes and process variability. 3. Attain proficiency in process capability analysis, 4. Instruct theory and practice of product control methodology. 5. Comprehend the importance of reliability theory in industries.						
Course Outline	**Unit I:**Modified control charts - Basic principles and design of cumulative charts. Moving-average and geometric moving-average control charts - sloping control chart. Process capability analysis using histogram, probability plotting and control chart - Process capability ratios- use and their interpretations.						

	Unit II: Specification limits and tolerance limits - Modified control charts - Basic principles and design of cumulative-sum control charts – Concept of V-mask procedure – Tabular CUSUM charts. Construction of Moving range, moving-average and geometric moving-average control charts.
	Unit III: Acceptance sampling: Sampling inspection by attributes – single, double and Sequential sampling plans – Rectifying Inspection. Measures of performance: OC, ASN, ATI and AOQ functions. Concepts of AQL, LTPD and IQL. Dodge – Roming and MIL-STD-105D tables. Sampling inspection by variables - known and unknown sigma variables sampling plan - Merits and limitations of variables sampling plan - Derivation of OC curve – determination of plan parameters.
	Unit IV: Variable Sampling: Assumptions, Single and Double Variable Sampling Plans - Application of Normal and Non-central t - Distributions in Variable Sampling.
	Unit V: Continuous Sampling and Sequential Sampling- Continuous sampling plans by attributes - CSP-1 and its modifications - concept of AOQL in CSPs - Multi-level continuous sampling plans - Operation of multilevel CSP of Lieberman and Solomon – Wald - Wolfowitz continuous sampling plans - Sequential Sampling Plans by attributes – Decision Lines - OC and ASN functions.
Extended Professional Component (is a part of internal component only, Not to be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC / others to be solved (To be discussed during the Tutorial hour)
Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text	1. Montgomery, D.C. (2009). Introduction to Statistical Quality Control, Sixth Edition, Wiley India, New Delhi. 2. John T. Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

After the successful completion of the course, the students will be able to:
1. Construct control charts for large and smaller shifts in the process parameters
2. Effectively interpret the results from the control charts
3. Carry out process capability analysis
4. Adopt appropriate sampling inspection plans for given conditions
5. Find failure rate, identify failure rate distributions, compute reliability of components and systems

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. To understand analysis of variance and experimental designs
2. To have strong theoretical knowledge in Orthogonal Latin squares, Hyper Graeco Latinsquares, factorial and fractional factorial experiments, PIBD, inter and intra blocks, split plot, analysis covariance
3. To understand clinical trial concepts and Response surface methodology
4. To do numerical problems and able to get critical thinking to solve problems
5. To choose suitable experiment and do it for real life problems.

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. To equip their knowledge with theoretical and practical skills which are necessary for the analysis of stochastic dynamical system in economic, financial mathematics, engineering, business and other fields.
2. To attain knowledge about stochastic process in the time domain such as Markov processes with a discrete state space, including Markov chains, Poisson processes and birth and death processes.
3. To demonstrate the specific applications to Poisson and Gaussian processes.
4. To carry out derivations involving conditional probability distributions and conditional expectations.
5. To define basic concepts from the theory of Markov chains and present proofs for the most important theorems.

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for thissubject.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. The student who successfully completes this course should have a reasonable grasp of the theoretical foundations of categorical data analysis and have sufficient skills to apply categorical data analysis methods.
2. The student will be able to derive and work with sampling distributions of binary or categorical measures.
3. Students will be familiar with a variety of methods for analyzing categorical or count data.

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

After the successful completion of the course, the students will be able to:

1. Demonstrate an understanding of the importance of data mining and the principles of business intelligence.
2. Organize and prepare the data needed for data mining using pre-processing techniques.
3. Perform exploratory analysis of the data to be used for mining.
4. Implement the appropriate data mining methods like classification, clustering or Frequent Pattern mining on large data sets.
5. Define and apply metrics to measure the performance of various data mining algorithms.

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. Explain in detail the Bayesian framework for data analysis and its flexibility and be able to demonstrate when the Bayesian approach can be beneficial.
2. Develop, analytically describe, and implement both single and multi- parameter probability models in the Bayesian framework.
3. Demonstrate the role of the prior distribution in Bayesian inference and be able to articulate the usage of non-informative priors and conjugate priors.
4. Show high level Interpretation of Bayesian Analysis Results and be able to readily perform Bayesian model evaluation and assessment

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. Students can understand the key statistical components involved in the planning and conduct of clinical trials.
2. Awareness of different populations for analysis and understand which is appropriate to address specific research
3. Students will be familiar with the use of the cross-over design.

Course Learning Outcome (for Mapping with POs and PSOs)

After successfully completing the course, a student should be able to demonstrate…

1. Understanding and implementing Linear Mixed Models (LMM).
2. Implementation of statistical procedures within the R environment.
3. Data manipulation - acquiring skills in flexible matrix manipulation.
4. Scripting - programming an analysis in such a way that the script can be used with minimal effort for similar datasets and analyses and for especially large datasets
5. Data visualization - learning how to create high-quality figures, especially associated with more complex analyses (e.g. three-dimensional scatter plots, Trellis displays, etc.).

11.2.4 Group D:

11.2.4.1 Survival Analysis

Title of the Course		**Survival Analysis**					
Paper Number		X					
Category	**ED**	**Year**	I	**Credits**	3	**Course Code**	**26UPSTA1E10**
		Semester	II				
Instructional Hours per week		**Lecture**	**Tutorial**	**Lab Practice**	**Total**		
		3	1	-	4		
Pre-requisite		Basic knowledge in linear models and their properties					
Objectives of the Course		The main objectives of this course are to: 1. To learn the analysis of survival data. 2. To distinguish censored and uncensored data. 3. To visualize and communicate time-to event data, to fit and interpret failure time model.					
Course Outline		**Unit I:** Concepts of time, Order and random Censoring, likelihood in these cases. Life distributions- Exponential, Gamma, Weibull, Lognormal, Pareto, Linear Failure rate. Parametric inference (Point estimation, scores, MLE)					
		Unit II: Life tables, failure rate, mean residual life and their elementary properties. Concept of Ageing, Types of Ageing classes and their properties and relationship between them, Bathtub Failure rate, Concept of Inverse Hazard rate.					
		Unit III: Estimation of survival function Actuarial Estimator, Kaplan-Meier Estimator, Estimation under the assumption of IFR / DFR. Tests of exponentiality against non- parametric classes- Total time on test, Despande test.					
		Unit IV: Two sample problem- Gehan test, Log rank test. Mantel Haenszel test, Tarone Ware tests. Introduction to Semi- parametric regression for failure rate, Cox's proportional hazards(PH) model with one and several covariates and estimation problems in Cox's PH Model. Rank test for the regression coefficients.					
		Unit V: Introduction to Competing risks analysis and estimation problems in competing risk model for parametric and non- parametric semi parametric set up. Ideas of Multiple decrement life table and its applications.					

Extended Professional Component (is a partof internal component only, notto be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC / applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. (To be discussed during the Tutorial hour)
Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text Books	1. Miller, R.G. (1981): Survival analysis (John Wiley). 2. Cox, D.R. and Oakes, D. (1984) : Analysis of Survival Data, Chapman and Hall, New York.
Reference Books	1. Elisha T Lee, John Wenyu Wang and Timothy Wenyu Patt (2003): Statistical Methods for Survival data Analysis, 3/e, Wiley Inter Science. 2. Gross, A.J. and Clark, V.A. Johnson N.L.: Survival Models and Data Analysis, John Wiley and sons. 4. Kalbfleisch J.D. and Prentice R.L.(1980), The Statistical Analysis of Failure Time Data, JohnWiley.
Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

After the successful completion of the course, the students will be able to:

5. Understand the elements of reliability, hazard function and its applications.
6. Understand the concept of censoring, life distributions and ageing classes.
7. Estimate nonparametric survival function of the data.
8. Explain test of exponentiality against nonparametric classes, two sample problems.

Title of the Course		**Econometrics**					
Paper Number		XI					
Category	**ED**	**Year**	I	**Credits**	3	**Course Code**	**26UPSTA1E11**
		Semester	II				
Instructional Hours per week		**Lecture**	**Tutorial**	**Lab Practice**		**Total**	
		3	1	-		4	
Pre-requisite		Basic knowledge in linear models and their properties					
Objectives of the Course		The main objectives of this course are to: 1. Develop knowledge on concepts of methodology, nature and scope of Econometric analysis 2. Inculcate the ideas of applications of econometrics 3. Understand and explore the concepts of linear models 4. Explore prominent estimation methods for linear regression model and simultaneous equation models.					
Course Outline		**UNIT I:** Nature and scope of Econometrics - Illustrative Examples Production and cost analysis - Theory and analysis of consumer demand specification - Estimation of demand function- Price and income elasticity of demand - Price elasticity's of supply - Torquivists model of demand for inferior goods models building bias in construction of models.					
		UNIT II: Single equation linear model: static case - Ordinary least square model and generalized least squares model: Introduction - estimation and prediction - Problem of multi collinearity and heteroscedasticity – Causes, consequences and solutions of and estimation.					
		UNIT III: Autocorrelation: Causes, consequences and testing for autocorrelated disturbances - Autoregressive series of order 1 (AR(1)) - Lagged variables and distributed log methods - Errors in variable models and Instrumental variables. Economical Forecasting – long term and short term.					
		UNIT IV: Simultaneous equations model- Concept, structure and types - Identification Problem with restrictions on variance and covariance - Rank and order conditions of identifiability –Methods of estimation- Indirect least square method, two-stage least squares method of estimation and Estimation of Limited Information Maximum Likelihood (LIML).					

	UNIT V: K-Class estimators - Full information estimators - Full Information Maximum Likelihood (FIML) - Three stage least squares estimators (3-SLS) and its Properties - Comparison of various estimation methods.
Extended Professional Component (is a partof internal component only, Notto be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC / applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

After the successful completion of the course, the students will be able to:

1. Understand the basic concepts of Econometrics, methodology and limitations of using Econometric theory.
2. Derive Generalized Least square estimators and its properties.
3. Address the problem of violation of basic assumptions of GLS.
4. Find the solution for structural and reduced form models.
5. Obtain viable, reliable and optimal solution under simultaneous equation models.

Title of the Course		**Research Methodology in Statistics**					
Paper Number		**XV**					
Category	**Core**	**Year**	II	**Credits**	4	**Course Code**	**26UPSTA1E15**
		Semester	III				
Instructional Hours per week		**Lecture**	**Tutorial**	**Lab Practice**	**Total**		
		3	1	--	4		
Pre-requisite							
Objectives of the Course		1. To understand the importance of Research problem in Statistics, and significance of report writing. 2. Learning some statistical methodology for random variables. 3. Acquiring knowledge of R software for statistical Computation.					
		Introduction to Research Methodology					
		Unit I: Concepts of Research: Meaning, objectives, and significance of research- Types of research: Fundamental, Applied, Descriptive, Analytical, Exploratory, Experimental; Scientific method and characteristics of good research-Research process and identification of research problems; Formulation of objectives, hypotheses, and research questions; Literature Review: Sources of literature, Review techniques and referencing methods, Identification of research gaps; Variables and Measurement: Types of variables-Scales of measurement: Nominal, Ordinal, Interval, Ratio-Reliability and validity					
		Research Design and Sampling Techniques					

Course Outline	**Unit II:** Research Design: Meaning and importance; Types of research design: Exploratory, Descriptive, Diagnostic, Experimental, Pilot study, and protocol development; Sampling Techniques: Census and sample survey, Probability sampling: Simple random sampling, Stratified sampling, Systematic sampling, Cluster sampling; Non-probability sampling: Convenience sampling, Purposive sampling, Snowball sampling; Sample Size Determination: Factors affecting sample size, Basic sample size estimation for mean and proportion (concept only).
	Data Collection and Statistical Analysis
	Unit III: Data Collection: Primary and secondary data; Methods of data collection: Observation, Interview, Questionnaire, Schedule, Questionnaire design, and scaling techniques; Data Processing: Editing, coding, classification, and tabulation; Data cleaning and handling missing values; Descriptive Statistics: Measures of central tendency, Measures of dispersion, Skewness and kurtosis, Graphical presentation of data (concept only).
	Inferential Statistics and Interpretation
	Unit IV: Probability and Sampling Distribution: Basic probability concepts, Normal distribution, Central Limit Theorem; Statistical Inference: Estimation and confidence intervals, Hypothesis testing, Type I and Type II errors, p-value, and level of significance; Parametric Tests: z-test, t-test, Chi-square test, ANOVA; Non-Parametric Tests: Sign test, Mann–Whitney U test, Kruskal–Wallis test; Correlation and Regression: Pearson and Spearman correlation, Simple linear regression (concept only).
	Research Ethics, Report Writing and Project Work
	Unit V: Research Ethics; Ethics in biomedical and social science research; Informed consent; Plagiarism and academic integrity; Institutional Ethics Committee (IEC); Research Report Writing: Structure of research report/thesis, Abstract, Introduction, Methodology, Results, Discussion, Conclusion. Citation styles, Preparation of tables, graphs, and bibliography; Research Publication: Journal selection, Impact factor and indexing, Predatory journals, Basics of manuscript preparation; Project Work: Preparation and presentation of a mini research project; Viva voce and seminar presentation.
	Practical Component: Preparation of questionnaire - Sampling exercise - Data entry using SPSS/R/Excel/R - Descriptive and inferential statistical analysis- Interpretation of outputs- Preparation of research report.
Extended Professional Component (is a part of internal component only, Not to be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC / others to be solved (To be discussed during the Tutorial hour)
Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text	1. Jonathan, Anderson et al. (1977). Thesis and Assignment Writing, Wiley Eastern Ltd, New York. 2. Pannerselvam, R. (2006). Research Methodology, Prentice-Hall of India Private Limited, New Delhi.

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for thissubject.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. Describe the necessity of defining the problems and techniques and can explain the importance of literature survey, Layout of the research report and significance of report writing.
2. Generalise the statistical studies using the data measurement scales, (nominal, ordinal, ratio and interval scales).
3. Apply the sources of error in measurement compare the scaling technique (likert type scaling ,cumulative scaling).
4. Summarize the knowledge of simulation Concept and its Advantages with respect to Simulation Algorithm and anlayse the simulation techniques with random number generation.
5. Describe the R language and interpret the statistical computation. Manipulate the R coding to categorize the cumulative probabilities using Binomial and Poisson models.

Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. Identify when not to use a non-parametric method.
2. Different non-parametric methods in estimation, testing, model fitting, and in analyses.
3. Summarize data using both graphical and numerical methods for use in non-parametric statistical methods.
4. Formulate, test and interpret various hypothesis tests for location, scale, and independence problems.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

1. Understanding and implementing Linear Mixed Models (LMM).
2. Implementation of statistical procedures within the R environment.
3. Data manipulation - acquiring skills in flexible matrix manipulation.
4. Scripting - programming an analysis in such a way that the script can be used with minimal effort for similar datasets and analyses and for especially large datasets
5. Data visualization - learning how to create high-quality figures, especially associated with more complex analyses (e.g. three-dimensional scatter plots, Trellis displays, etc.).

SEC: Tableau and Power BI

Title of the Course		**Tableau and Power BI**					
Category	Core	**Year**	I	**Credits**	2	**Course Code**	**26UPSTA1L04**
		Semester	II				
Objectives of the Course		To develop knowledge and skills in Business Intelligence, data analysis, visualization and DAX using Power BI and Tableau.					
Course Outline		Student will be able to CO 1: Understand the fundamentals and features of Power BI. CO 2: Import, clean, transform and manage data using Power BI. CO 3: Create reports, dashboards and visualizations for data analysis. CO 4: Apply statistical and analytical techniques using Power BI. CO 5: Use DAX functions for data modeling and analysis.					
		UNIT I - Power BI and Tableau Basics: Introduction to Business Intelligence (BI) – Overview of Power BI – Components, Features, Advantages, and Applications of Power BI – Installation, User Interface, Workspaces, and Power BI Service – Overview of Tableau – Tableau Products, Features, Advantages, and Applications – Installation, User Interface, and Tableau Cloud – Comparison of Power BI and Tableau.					
		UNIT II - Data Handling: Understanding Data Sources – Connecting to Web-based Data – Importing Data from Excel, CSV, SQL and Online Sources – Data Loading and Refreshing – Data Cleaning and Transformation using Power Query – Creating Tables and Relationships.					
		UNIT III - Data Analysis: Data Importing – Data Cleaning (Power Query) – Data Modeling – Data Visualization – Creating Charts, Reports and Dashboards – Interactive Visualizations and Filters.					
		UNIT IV - Statistics in Power BI: Descriptive Statistics – Central Tendency, Dispersion and Distribution, Ranking and Percentiles – Diagnostic and Exploratory Analysis – Correlation Analysis, Time Series Analysis, Forecasting and Trend Line,					

	Clustering, Outlier Detection – Predictive & Advanced AI Analysis – Forecasting, Key Influencers, Regression Analysis.
	UNIT V - Data Analysis Expressions (DAX): Introduction to Data Analysis Expressions (DAX) – DAX Syntax and Functions – Text, Logical, Information, Table, and Aggregation Functions – Variables – Time Intelligence – CALCULATE Function – Evaluation Contexts and Relationships – Tableau Charts and Visualizations – Filters, Parameters, and Calculated Fields – Interactive Dashboards and Publishing.

Practical III – (Based on R Programming)

Title of the Course		**Statistics Practical III - (Based on R Programming)**					
Paper Number		**III**					
Category	**Core**	**Year**	II	**Credits**	2	**Course Code**	**26UPSTA1L05**
		Semester	III				
Instructional Hours per week		**Lecture**		**Tutorial**		**Lab Practice**	**Total**
		1		-		1	2
Pre-requisite		Basic knowledge of Testing Statistical Hypothesis, Multivariate Statistical Analysis and Time Series Analysis					
Objectives of the Course		1. Impart knowledge on statistical computation using real data sets. 2. To familiarize the students in solving problems in testing of hypotheses, non-parametric tests through R software. 3. Understand the theory through practical oriented training. 4. The concept of Applied Regression analysis were incorporated. 5. Write programming codes for the methods in Statistical quality control.					

Course Outline	**Core VII: Testing Statistical Hypothesis** 1. **Most powerful test** - Uniformly most powerful test- Likelihood ratio test- Chi-Square Test, Sequential Probability Ratio Test – OC and ASN function. **2. Non-parametric test** - Chi-Square test, Wilcoxon's Signed-Rank test, Mann-Whitney U test, Kolmogorov Smirnov test, Kruskal Wallis test, Friedman Test and Rank Correlation.
	Exercise under Multivariate Analysis 1. Maximum likelihood estimators of mean vector and dispersion Matrix. 2. Test for mean vector when dispersion matrix Σ is known. Hotelling's T^2 statistic 3. Test for covariance matrix Principal component analysis. 4. Canonical correlation. Discrimination and Classification problems. Factor Analysis, Cluster Analysis **Exercise under Applied Regression Analysis** 1. Multiple Linear Regression 2. Logistic Regression 3. Polynomial regression 4. Generalized Linear Models **Exercise under Statistical Quality Control** 1. Control Chart for X bar Chart 2. Control Chart for R Chart 3. S – Chart 4. C-Chart 5. P-Chart 6. np- Control Chart 7. U-chart

Non- Major Elective – I (MOOC/Swayam)

Title of the Course		**Operations Research**					
Paper Number		I					
Category	**Swayam (Self Study)**	**Year**	I	**Credits**	3	**Course Code**	**26UPSTA1N01**
		Semester	III				
Instructional Hours per week		**Lecture**	**Tutorial**	**Lab Practice**	**Total**		
		3	1	-	4		
Pre-requisite		Basic knowledge in quality control and its properties					
Objectives of the Course		The main objectives of this course are to: 1. Optimization techniques that will be useful in the personal and professional life. 2. To learn the mathematical formulation of complex decision-making problems and arrives at optimal or near-optimal solutions using different techniques of operations research.					
Course Outline		**Unit I:** Mathematical Programming - Solving of LPP by graphical method - Linear Programming Problem (LPP)–Simplex, Big M and Two-Phase methods –Solving LPP using Duality - Dual Simplex method.					
		Unit II: Post Optimality and Sensitivity Analysis–Variation in cost vector and requirement vector– Addition and deletion of single variable and single constraint - Integer Programming Problem (IPP) - Gomory's cutting plane algorithm– Mixed IPP – Branch and Bound technique.					
		Unit III: Dynamic programming problem (DPP) - Bellman's principle of optimality - General formulation - computation methods and application of DPP - Solving LPP through DPP approach.					
		Unit IV: Non-Linear Programming: Constrained and Unconstrained Problems of Maxima and minima, Constraints in the form of equations (Lagrangian Method) and in equations (KuhnTucker conditions), Quadratic programming: Beale's and wolf's methods simplex method for quadratic programming.					

	Unit V: PERT - CPM: Applications, Basic Steps in PERT/CPM techniques; Time estimates and Critical Path in Network Analysis; Optimum and minimum duration cost, PERT, Resource Allocations.
Extended Professional Component (is a partof internal component only, notto be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC / applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. (To be discussed during the Tutorial hour)
Skills acquired from this course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text Books	1. Hillier FS and Libermann GJ (2002): Introduction to Operations Research,7 th Edition, McGraw Hill. 2. Kanti Swarup,P.K.Gupta and Man Mohan(2004):Operations Research, Sultan Chand and Sons, New Delhi. 3. Gross D, Shortle J.F. Thompson J.M. and Harris C.M. (2011): Fundamentals of Queuing Theory, John Wiley & Sons.

K. Chandrasekhara Rao and Shanti Lata Misra (2012), Operations Research, Narosa Publishing House
Website and e-Learning Source	e-books, online tutorials taken from MOOC/SWAYAM platform for this subject.

Course Learning Outcome (for Mapping with POs and PSOs)

After the successful completion of the course, the students will be able to:

1. Understand basics and formulation of linear programming problems and appreciate their limitations; solve linear programming problems using graphical method.
2. Apply simplex method to solve real life problems.
3. Solve artificial variable technique, duality theory, revised simplex method, sensitivity analysis, transportation and assignment problems.
4. Understand the concept of Game theory, PERT/ CPM, simulation, investment analysis with real life applications.

Paper Number		**II**				
Category	**Swayam (Self Study)**	**Year**	I	**Credits**	3	**Course Code**	**26UPSTA1N02**
		Semester	III				
Instructional Hours per week		**Lecture**	**Tutorial**	**Lab Practice**	**Total**		
		3	1	-	4		
Pre-requisite		Basic knowledge in Basic knowledge in Insurance calculation					
Objectives of the Course		The main objectives of this course are to: 1. Analyze actuarial data using advanced statistical techniques 2. Calculate quantities such as premiums, reserves and superannuation contribution rates using actuarial techniques 3. Analyze real and hypothetical problems in insurance and superannuation 4. Demonstrate creativity and initiative in application of knowledge to problem solving and innovation. 5. Execute a project requiring research or a real-world application and assess the suitability of actuarial, financial and models in solving actuarial problems.					
Course outline		**Unit I:** The life table: Basic definitions, probabilities, construction of life tables, life expectancy, Life annuities: Introduction, calculating annuity premium, interest and survivorship discount function, guaranteed payments, deferred annuities.					
		Unit II: Introduction, calculation of life insurance premiums, types of life insurance, combined benefits, insurances viewed as annuities, Insurance and annuity reserves: The general pattern reserves, recursion, detailed analysis of an insurance.					

	Unit III: Fractional durations: Life annuities paid monthly, immediate annuities, fractional period premium and reserves, reserves at fractional durations, Continuous payments: Continuous annuities, force of discount, force of mortality, Insurance payable at the moment of death, premiums and reserves.
	Unit IV: Joint life status, joint annuities and insurances, last survivor annuities and insurances, moment of death insurances. The general two life annuity and insurance contracts, contingent insurances.
	Unit V: Basic model, insurances, Determination of the models from the forces of decrement. Stochastic approach to insurance and annuities; Stochastic approach to insurance and annuity benefits, deferred contracts, Stochastic approach to reserves and premiums, variance formula
Extended Professional Component (is a partof internal component only, notto be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC / applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. Non- Major Elective – II

Title of the Course		**Basic Statistical Methods**					
Paper Number		**1**					
Category	**NME ii**	**Year**	**II**	**Credits**	4	**Course Code**	**26UPSTA1N02**
		Semester	**III**				
Instructional Hours Per week		**Lecture**	**Tutorial**		**Lab Practice**	**Total**	
		3	1		-	4	
Pre-requisite		Basic skills in correlation and Non parametric tests					
Objectives of the Course		The main objectives of this course are to: 1. Demonstrate knowledge of probability and the standard statistical distributions. 2. Demonstrate knowledge of fixed-sample and large-sample statistical properties of point and interval estimators. 3. Demonstrate knowledge of the properties of parametric, semi-parametric and nonparametric testing procedures. 4. Demonstrate the ability to perform complex data management and analysis. 5. Demonstrate the ability to apply linear, nonlinear and generalized linear models. 6. Demonstrate understanding of how to design experiments and surveys for efficiency. 7. Demonstrate knowledge of classical and repeated measures multivariate methods and computational techniques.					

Course outline	**Unit I:** Definition of Statistics and its applications in various disciplines - Collection of Data - classification, Tabulation and Graphical representation of data - construction of univariate and Bivariate frequency distribution - Measures of central tendency - Measures of dispersion - coefficient of variation. **Unit II:** Random experiment - sample space - events - mathematical and statistical definition of probability - conditional probability – Bayes' theorem - Random variables - Distribution functions - moments - Binomial distribution - Poisson distribution - Normal distribution and their properties. **Unit III:** Scatter diagram - Karl Pearson's coefficient of correlation- concurrent deviation method - coefficient of determination - Spearman's Rank correlation - Linear regression–fitting of regression lines. **Unit IV:** Tests of significance - hypotheses - two types' of errors - power function - critical region - level of significance – small sample tests based on t and F distributions. Chi-square test of goodness of fit - contingency table -Test of independence of factors - Large sample tests. **Unit V:** Test of equality of several population means one way and two way analysis of variance - Non-parametric tests Sign, Run and Median tests - two sample rank test - Sampling and its uses, sampling methods - Simple random sampling, systematic and stratified.
Extended Professional Component (is a part of internal Component only, Not to be included in the External Examination Question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC /applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. (To be discussed during the Tutorial hour)
Skills acquired from This course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text Books	1. Agarwal, B.L. (2013). Basic statistics. Anshan Publications. 2. Sharma, J.K. (2007). Business Statistics (Second Edition). Pearson Education, New Delhi. 3. Sokal, P.R. and Rohlf, F.J. (1969). Bio Statistics. W.H. Freeman and Co., San Francisco.

Course Learning Outcome (for Mapping with Pos and PSOs)

After successfully completing the course, a student should be able to demonstrate…

1. Recognize and apply some common probability distributions, and assess if underlying assumptions for the distribution seem reasonable.
2. Be able to perform basic statistical calculations and graphical analyses.
3. Analyze research questions based on statistical data, draw relevant conclusions, and be familiar with the limitations of particular statistical methods.
4. Be able to discuss and reflect upon ethical topics relevant to statistical methods

Title of the Course	**Statistics for Behavioral Sciences**						
Paper Number	**II**						
Category	**NME ii**	**Year**	**II**	**Credits**	4	**Course Code**	**26UPSTA1N03**
		Semester	**III**				
Instructional Hours Per week	**Lecture**		**Tutorial**		**Lab Practice**		**Total**
	3		1		-		4
Pre-requisite	Basic skills in basic statistics and measure of central tendency						
Objectives of the Course	The main objectives of this course are to: 1. Distinguish among different scales of measurement and their implications; 2. Interpret data displayed in tables and graphically; 3. Apply concepts of sample space and probability; 4. Calculate measures of central tendency and variation for a given data set; 5. Identify the standard methods of obtaining data and identify advantages and disadvantages of each.						
Course outline	**Unit I:** Nature and scope of Statistics - characteristics and limitation of Statistics - statistical investigation - preparation of questionnaire - design of sampling - simple random, stratified and systematic sampling - collection of data - primary and secondary data. **Unit II:** Processing and presentation of data - Classification of data - tabulation of data - Formation of frequency tables - Diagrammatic presentation of statistical data - bar diagrams - pie diagrams and pictograms - simple problems – Graphical presentation of statistical data - Histogram, frequency curves and Ogive curve- simple problems.						

	Unit III: Measures of central tendency - mean, median, mode - simple problems - measures of dispersion - range, mean deviation, quartile deviation and standard deviation - relative measures of dispersion - simple problems. **Unit IV:** Concept of Skewness and Kurtosis - Karl Pearson's and Bowley's coefficients of Skewness- moments- coefficients of Skewness and Kurtosis - simple problems. **Unit V:** Correlation: Scatter diagram - simple correlation, Rank correlation. Regression - simple regression lines (without proof) - Tetrochoric correlation, Phi coefficient and Kendall's co-efficient - simple problems.
Extended Professional Component (is a part of internal Component only, Not to be included in the External Examination Question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC /applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. (To be discussed during the Tutorial hour)
Skills acquired from This course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text Books	1. Camphell, R.C. (1989). Statistics for Biologists, Cambridge University Press, London. 2. Garret, H. E., and Woodworth, R. S. (2006). Statistics in Psychology and Education. Cosmo Publications, New Delhi. 3. Goon, A. M., Gupta, M. K., and Dasgupta, B. (2008). Fundamentals of Statistics, Volume-I, World Press Ltd, Calcutta. 4. Gupta, S. C., and Kapoor, V. K. (2000). Fundamentals of Mathematical Statistics, Tenth Edition, Sultan Chand and Sons, New Delhi. 5. Saxena, H. C. (1967). Elementary Statistics, Sultan Chand & Co., New Delhi. 6. Tate, M. W. (1964). Statistics in Education. Macmillan Co., New York. Y

Course Learning Outcome (for Mapping with Pos and PSOs)

Students who successfully complete the course should:

1. Explain the major concepts, theoretical perspectives and empirical findings in psychology
2. Evaluate the major methods of inquiry and statistical analysis in psychology
3. Discuss the ways in which diversity influences psychological processes
4. Critically analyze existing literature on a topic in psychology
5. Design research studies, including the application of statistical procedures
6. Discuss how psychological principles can be used to explain social issues, address pressing societal needs and/or inform public policy (aligns with new core and social behavioral inquiry)

Title of the Course	**Probability and Statistics for Scientists**						
Paper Number	**III**						
Category **NME ii**	**Year**	**I**	**Credits**	4	**Course Code**	**26UPSTA1N04**	
	Semester	**II**					
Instructional Hours Per week	**Lecture**	**Tutorial**	**Lab Practice**	**Total**			
	3	1	-	4			
Pre-requisite	Basic skills in Probability and testing						
Objectives of the Course	The main objectives of this course are to: **Knowledge** 1. Apply probability theory to set up tree diagrams. 2. Apply probability theory via Bayes' Rule. **Skills** 1. Able to apply the central limit theorem to sampling distribution 2. Able to use estimation technique to determine point estimates confidence interval and sample size. **Attitudes** 1. Able to solve problems independently. 2. Able to appreciate the diversity of the applications of central limit theorem. 3. Able to appreciate the diversity of the applications of hypothesis testing						
Course outline	**Unit I:** Sample spaces – events – Probability axioms – Conditional Probability – Independent events – Baye's formula - Random Variables - Distribution functions – Marginal distributions, Conditional distribution – Stochastic Independence - Expectation – Conditional expectation and Conditional Variance. Moment generating functions – Cumulant generating functions.						

	Unit II: Probability distributions – Binomial, Poisson, geometric, uniform, exponential, normal, gamma, beta (generating function, Mean, variance and Simple problems). Sampling distributions - *t*, *f*, Chi-square distributions-properties. **Unit III:** Estimation: Point estimation – Characteristics of estimation – Interval estimation – Interval estimates of Mean, Standard deviation, proportion, difference in means and ratios of standard deviations. **Unit IV:** Test for means, Variances & attributes using the above distributions large sample tests – tests for means, variances and proportions. Analysis of Variance: One way and two way classifications – Complete Randomized blocks – Randomized Block Design and Latin Square Design (Only Problems). **Unit V:** Statistical quality control – Statistical basis for control charts – Control limits – Control Charts for variables and attributes – mean chart, range chart, standard deviation chart - charts for defectives, defects – *p*, *np*, *c* charts.
Extended Professional Component (is a part of internal Component only, Not to be included in the External Examination Question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC /applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. (To be discussed during the Tutorial hour)
Skills acquired from This course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text Books	1 Gupta, S.C., and Kapoor, V. K. (1977). Fundamentals of Mathematical Statistics, Sultan Chand & Sons, New Delhi. 2. Montgomery, D.C. (2009). Introduction to Statistical Quality Control, Sixth Edition, Wiley India, New Delhi. 3. Montgomery, D.C., and Runger, G. C. (2010), Applied Statistics and Probability for Engineers, Fifth Edition, John Wiley & Sons, New York.

Course Learning Outcome (for Mapping with Pos and PSOs)

After successfully completing the course, a student should be able to demonstrate…

1. Apply key concepts of probability, including discrete and continuous random variables, probability distributions, conditioning, independence, expectations, and variances.
2. Define and explain the different statistical distributions (e.g., Normal, Binomial, Poisson) and the typical phenomena that each distribution often describes.
3. Apply the basic rules and theorems in probability including Bayes's theorem and the Central Limit Theorem (CLT).
4. Define and demonstrate the concepts of estimation and properties of estimators.
5. Apply the concepts of interval estimation and confidence intervals.

Title of the Course		**Statistical Data Analysis using R**					
Paper Number		**IV**					
Category	**NME ii**	**Year**	II	**Credits**	4	**Course Code**	**26UPSTA1N05**
		Semester	III				
Instructional Hours per week		**Lecture**		**Tutorial**	**Lab Practice**	**Total**	
		4		--	--	4	
Pre-requisite							
Objectives of the Course		Upon successful completion of this course, the students will be able to: 1. Apply R programming and understand different data sets. 2. Apply R Programme and construct graphs, charts and descriptive statistics. 3. Analyze the data and know probability and sampling by using R Programming 4. Apply R Programming to test the hypothesis of the study. 5. Predict the data and take decisions through R programming.					
Course Outline		**UNIT I: Introduction to R programming:** What is R? - Installing R and R Studio-R Studio Overview - Working in the Console - Getting Help in R and Quitting R Studio Installing and loading packages. **Data structures, variables, and data types in R:** Creating Variables - Numeric, Character and Logical Data - Vectors - Matrix- Data Frames - Factors -Sorting Numeric, Character, and Factor Vectors - Special Values.					
		UNIT II: Data Visualization using R: Diagrammatic representation of data - Scatter Plots - Box Plots - Scatter Plots and Pie diagram. **Descriptive statistics in R:** Measures of central tendency - Measures of variability - Skewness and kurtosis - Summary functions, and descriptive statistics by group.					

	UNIT III: Basic Probability in R: Discrete Random Variables -Binomial Random Variable - Continuous Random Variables. **Sampling in R:** Types of Samples - Simple Random Sampling (SRS) - Systematic Sampling - Stratified Sampling - Cluster Sampling.
	UNIT IV: Testing of Hypothesis using R: T-test, Paired Test, Chi Square test, Analysis of Variance and Correlation.
	UNIT V: Predictive Analytics in R: linear Regression model, Non-Linear Least Square, multiple regression analysis, Logistic Regression.

Jay Kerns, (2010), " Introduction to probability and Statistics Using R" first editions.

Course Learning Outcome (for Mapping with POs and PSOs)
After successfully completing the course, a student should be able to demonstrate…

1. Understanding and implementing Linear Mixed Models (LMM).
2. Implementation of statistical procedures within the R environment.
3. Data manipulation - acquiring skills in flexible matrix manipulation.
4. Scripting - programming an analysis in such a way that the script can be used with minimal effort for
   similar datasets and analyses and for especially large datasets
5. Data visualization - learning how to create high-quality figures, especially associated with more complex
   analyses (e.g. three dimensional scatter plots, Trellis displays, etc.).

CO-PO Mapping (Course Articulation Matrix)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

12. VALUE ADDED COURSE

Title of the Course		**Statistical Techniques Using Open Source Software**					
Paper Number		**I**					
Category	**VA**	**Year**		**Credits**	3	**Course Code**	**26UPSTA1V01**
		Semester	**II**				
Instructional Hours Per week		**Lecture**	**Tutorial**	**Lab Practice**	**Total**		
		3	1	-	4		
Pre-requisite		Basic skills in basic statistics and non parametric tests					
Objectives of the Course		The main objectives of this course are to: 1. Identify and utilize relevant previous work that supports their research 2. Articulate a timely and important research question or creative objective 3. Identify and utilize appropriate methodologies to address the research question or creative objective 4. Meet the relevant field's standards for the responsible conduct of research, and effectively navigate challenges that arise in the research process 5. Work collaboratively with other researchers, demonstrating effective communication and problem-solving skills 6. Present the research effectively in a conference setting and a written publication					
Course outline		**UNIT I:** Overview of R - Basic fundamentals - Installation and use of software, data editing, Importing data into R – Use of R as a calculator - Components of R console-Use of Packages **UNIT II:** R Data types - Data management with vectors indexing, lists, factors, strings, Data frame - Arithmetic, Relational and Logical operators-Matrix operations.					

	UNIT III: Graphics and plots - creating simple graphic application for Statistical problems. **UNIT IV:** Statistical functions for Central tendency, Variation, Skewness and Kurtosis-Correlation and Regression. **UNIT V:** Statistical Tests - t, F, chi square - programming and illustration with examples.
Extended Professional Component (is a part of internal Component only, not to be included in the External Examination Question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC /applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. (To be discussed during the Tutorial hour)
Skills acquired from This course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill

Course outline	**Unit I:** Definition of Statistics and its applications in various disciplines - Collection of Data -Classification, Tabulation and graphical representation of data- Construction of univariate and bivariate frequency distribution-measures of central tendency-measures of dispersion coefficient of variation. **Unit II:** Random experiment-sample space-events-mathematical and statistical definition of probability-conditional probability - Baye's theorem - random variable - distribution function - moments - Binomial distribution - Poisson distribution - normal distribution and their properties **Unit III:** Scatter diagram - Karl Pearson's coefficient of correlation - concurrent deviation method coefficient of determination - Spearman's Rank correlation - Linear regression - regression lines. **Unit IV:** Tests of significance - types of hypotheses - two types of errors - critical region - level of significance, small sample tests based on t, F distribution, Chi - square test of goodness of fit, contingency table - test of independence of factors - Large sample tests. **Unit V:** Test of equality of several population means, one way and two way analysis of variance. Non-parametric tests - sign, run and median tests - two sample rank test - sampling and its uses, sampling methods - unrestricted Random sampling (SRS) - Restricted Sampling (Stratified and Systematic).
Extended Professional Component (is a part of internal Component only, Not to be included in the External Examination Question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET / UGC – CSIR / GATE / TNPSC /applied survey techniques adopted in Economics and Statistics department of Tamil Nadu State Government. <tr><td colspan="2"></td><td colspan="6">On successful completion of the course, the student will be able to:
1. Understand the importance of Peace (Level: Understand)
2. Explain how to recover the state of Peace (Level: Understand)
3. Internalize and Practice the Values of Peace (Level: Apply)
4. Understand sustainable Peace and the role of oneself (Level: Understand)
5. Become the peace messenger who spreads the culture of Peace (Level: Apply)</td></tr>
<tr><td colspan="2">Course outline</td><td colspan="6">Unit I: Introduction to Peace Education and HWPL- Aims and objectives of Peace Education –Development of Peace work of HWPL – Making groups for assignments – Rapport building.

Unit II: Finding Peace, and me Diversity – Harmony – Original State of All Creation – Connectivity – Value – Role – Duty – Interpersonal relationship – Greed – Love – Order.

Unit III: Peace Values Gratitude – Consideration – Sacrifice – Understanding – Forgiveness – Respect for Parents, Teachers and Peace – Scripture – Cultural sphere
Unit IV: Peace Citizen Heritage – World Peace – Great legacy; a case of Peace – Law – Law-abiding Spirit – Treaty – DPCW – NGO; HWPL – Peace Citizen – Courage – Peace-loving Heart – Messenger of Peace
Unit V: Peace Messenger Peace Messenger – Peace experience – Will for Peace.

Tasks and Assignments:
- Writing an Essay on World Peace and Gratitude
- Engaging in debates on topics related to Peace
- Group Project for practicing Peace Values
- Group Project to promote the importance of Peace</td></tr>
