

B.C.A Syllabus under CBCS Pattern with effect from 2023-2024 onwards

PERIYAR UNIVERSITY

SALEM-636011

DEGREE OF BACHELOR OF COMPUTER APPLICATION

Syllabus for

B.C.A

(SEMESTER PATTERN- CBCS)

**(For Candidates admitted in the colleges affiliated to
Periyar university from 2023-2024 onwards)**

Introduction

BCA (Bachelor of Computer Application)

Education is the key to development of any society. Role of higher education is crucial for securing right kind of employment and also to pursue further studies in best available world class institutes else where within and outside India. Quality education in general and higher education in particular deserves high priority to enable the young and future generation of students to acquire skill, training and knowledge in order to enhance their thinking, creativity, comprehension and application abilities and prepare them to compete, succeed and excel globally. Learning Out comes-based Curriculum Framework (LOCF) which makes it student-centric, interactive and outcome-oriented with well-defined aims, objectives and goals to achieve. LOCF also aims at ensuring uniform education standard and content delivery across the state which will help the students to ensure similar quality of education irrespective of the institute and location.

Computer Application is the study of quantity, structure, space and change, focusing on problem solving, application development with wider scope of application in science, engineering, technology, social sciences etc. throughout the world in last couple of decades and it has carved out a space for itself like any other disciplines of basic science and engineering. Computer Application is a discipline that spans theory and practice and it requires thinking both in abstract terms and in concrete terms . Nowadays, practically every one is a computer user, and many people are even computer programmers. Computer Application can be seen on a higher level, as a science of problem solving and problem solving requires precision, creativity, and careful reasoning. The ever-evolving discipline of computer Application also has strong connections to other disciplines. Many problems in science, engineering, health care, business, and other areas can be solved effectively with computers, but finding a solution requires both computer science expertise and knowledge of the particular application domain. Computer Application has a wide range of specialties. These include Computer Architecture, Software Systems, Graphics, Artificial Intelligence, Computational Science, and Software Engineering. Drawing from a common core of computer science knowledge, each specialty area focuses on specific challenges. Computer Application is practiced by mathematicians, scientists and

engineers. Mathematics, the origins of Computer Science, provides reason and logic. Science provides the methodology for learning and refinement. Engineering provides the techniques for building hardware and software.

Programme Outcome, Programme Specific Outcome and Course Outcome

Computer Application is the study of quantity, structure, space and change, focusing on problem solving, application development with wider scope of application in science, engineering, technology, social sciences etc. The key core areas of study in Mathematics include Algebra, Analysis (Real & Complex), Differential Equations, Geometry, and Mechanics.

The Students completing this programme will be able to present Software application clearly and precisely, make abstract ideas precise by formulating them in the Computer languages. Completion of this programme will also enable the learners to join teaching profession, enhance their employability for government jobs, jobs in software industry, banking, insurance and investment sectors, data analyst jobs and jobs in various other public and private enterprises.

1. Programme Outcomes(PO)of BCA

- Scientific aptitude will be developed in Students
- Students will acquire basic Practical skills & Technical knowledge along with domain knowledge of different subjects in the Computer Science & humanities stream.
- Students will become employable; Students will be eligible for career opportunities in education field, Industry, or will be able to opt for entrepreneurship.
- Students will possess basic subject knowledge required for higher studies, professional and applied courses.
- Students will be aware of and able to develop solution oriented approach towards various Social and Environmental issues.
- Ability to acquire in-depth knowledge of several branches of Computer Science and aligned areas. This Programme helps learners in building a solid foundation for higher studies in Computer Science and applications.
- The skills and knowledge gained lead to proficiency in analytical reasoning, which can be utilized in modelling and solving real life problems.
- Utilize computer programming skills to solve theoretical and applied problems by critical understanding, analysis and synthesis.

- To recognize patterns and to identify essential and relevant aspects of problems.
- Ability to share ideas and insights while seeking and benefiting from knowledge and insights of others.
- Mould the students into responsible citizens in a rapidly changing interdependent society.

The above expectations generally can be pooled into 6 broad categories and can be modified according to institutional requirements:

PO1: Knowledge

PO2: Problem Analysis

PO3: Design/Development of Solutions

PO4: Conduct investigation of complex problems

PO5: Modern tools usage

PO6: Applying to society

2. Programme Specific Outcomes of B.Sc. Degree Programme in Computer Science

PSO1: Think in a critical and logical based manner

PSO2: Familiarize the students with suitable software tools of computer science and industrial applications to handle issues and solve problems in mathematics or statistics and real time application related sciences.

PSO3: Know when there is a need for information, to be able to identify, locate, evaluate, and effectively use that information for the issue or problem at hand.

PSO4: Understand, formulate, develop programming model with logical approaches to address issues arising in social science, business and other contexts.

PSO5: Acquire good knowledge and understanding to solve specific theoretical and applied problems in advanced areas of Computer science and Industrial statistics.

PO6: Provide students/learners sufficient knowledge and skills enabling them to undertake further studies in Computer Science or Applications or Information Technology and its allied areas on multiple disciplines linked with Computer Science.

PO7: Equip with Computer science technical ability, problem solving skills, creative talent and power of communication necessary for various forms of employment.

PO8: Develop range of generic skills helpful in employment, internships & societal activities.

PO9: Get adequate exposure to global and local concerns that provides platform for further exploration into multi-dimensional aspects of computing sciences.

Mapping of Course Learning Outcomes (CLOs) with Programme Outcomes (POs) and Programme Specific Outcomes (PSOs) can be carried out accordingly, assigning the appropriate level in the grids: (put tick mark in each row)

PO/PSO	PS O1	PS O2	PS O3	PS O4	PS O5	PS O6
PO1	☐					
PO2		☐				
PO3			☐			
PO4				☐		
PO5					☐	
PO6						☐

3. Highlights of the Revamped Curriculum

- Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, devising mathematical models and algorithms for providing solutions to industry/real
- life situations. The curriculum also facilitates peer learning with advanced mathematical topics in the final semester, catering to the needs of stakeholders with research aptitude.
- The General Studies and Computer Science based problem solving skills are included as mandatory components in the 'Training for Competitive Examinations' course at the final semester, a first of its kind.
- The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- The Industrial Statistics course is newly introduced in the fourth semester, to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.
- The Internship during the second year vacation will help the students gain valuable work experience that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge to practical situations. The state of art technologies in conducting a Explain a scientific and systematic way and arriving at a precise solution is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.

State-of-Art techniques from the streams of multi-disciplinary, cross disciplinary and interdisciplinary nature are incorporated as Elective courses, covering conventional topics to the latest – Statistics with R Programming, Data Science, Machine learning, Internet of Things and Artificial Intelligence etc..

4. Value additions in the Revamped Curriculum:

Semester	Newly introduced Components	Outcome/Benefits
I	Foundation Course To ease the transition of learning from higher secondary to higher education, providing an over view of the pedagogy of learning abstract Mathematics and simulating mathematical Concepts to real world.	• Instil confidence among students • Create interest for the subject
I, II, III, IV	Skill Enhancement papers (Discipline centric/Generic/Entrepreneurial)	• Industry ready graduates • Skilled human resource • Students are equipped with essential skills to make them employable
		• Training on Computing / Computational skills enable the students gain knowledge and exposure on latest computational aspects
		• Data analytical skills will enable students gain internships, apprenticeships, fieldwork involving data collection, compilation, analysis etc.
		• Entrepreneurial skill training will provide an opportunity for independent livelihood • Generate self-employment • Create small scale entrepreneurs • Training to girls lead to women empowerment
		• Discipline centric skill will improve the Technical know how of solving real life problems using ICT tools

III,IV,V & VI	Elective papers- An open choice of topics categorized under Generic and Discipline Centric	• Strengthening the domain knowledge • Introducing the stakeholders to the State-of-Art techniques from the streams of multi-disciplinary, cross disciplinary and interdisciplinary nature • Students are exposed to Latest topics on Computer Science/IT, that require strong mathematical background • Emerging topics in higher education /industry /communication network/health sector etc. are introduced with hands-on-training, facilitates designing of mathematical models in the respective sectors
IV	Industrial Statistics	• Exposure to industry moulds students into solution providers • Generates Industry ready graduates • Employment opportunities enhanced
II year Vacation activity	Internship /Industrial Training	• Practical training at the Industry/ Banking Sector /Private/ Public sector organizations / Educational institutions, enable the students gain professional Experience and also become responsible citizens.
V Semester	Project with Viva-voce	• Self-learning is enhanced • Application of the concept to real situation is conceived resulting in tangible outcome
VI Semester	Introduction of Professional Competency component	• Curriculum design accommodates all category of learners; Mathematics for Advanced Explain component will comprise of advanced topics in Mathematics and allied fields, for those in the peer group/ aspiring researchers • ‘Training for Competitive Examinations’ – caters to the needs of the aspirants towards most sought-after services of the nation viz, UPSC, CDS, NDA, Banking Services, CAT, TNPSC group services, etc.
Extra Credits: For Advanced Learners/Honors degree		• To cater to the needs of peer learners/research aspirants

Skills acquired from the Courses	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferable Skill
---	--

FC	Structured Programming Language in C	FC	2	-	-	-	2	2	25	75	100
Course Objective											
LO1	To familiarize the students with the Programming basics and the fundamentals of C, Data types in C, Mathematical and logical operations.										
LO2	To understand the concept using if statements and loops										
LO3	This unit covers the concept of Arrays										
LO4	This unit covers the concept of Functions										
LO5	To understand the concept of implementing pointers.										
UNIT	Details								No. of Hours	Course Objectives	
I	Overview of C: Importance of C, sample C program, C program structure, executing C program. Constants, Variables, and Data Types: Character set, C tokens, keywords and identifiers, constants, variables, data types, declaration of variables, Assigning values to variables--- Assignment statement, declaring a variable as constant, as volatile. Operators and Expression.								6	CO1	
II	Decision Making and Branching: Decision making with If, simple IF, IF ELSE, nested IF ELSE, ELSE IF ladder, switch, GOT O statement. Decision Making and Looping: While, Do-While, For, Jump in loops.								6	CO2	
III	Arrays: Declaration and accessing of one & two-dimensional arrays, initializing two-dimensional arrays, multidimensional arrays.								6	CO3	
IV	Functions: The form of C functions, Return values and types, calling a function, categories of functions, Nested functions, Recursion, functions with arrays, call by value, call by reference, storage classes-character arrays and string functions								6	CO4	

V	Pointers: definition,declaringandinitializingpointers,accessing avariablethroughaddressandthroughpointer,pointer expressions, pointer increments and scale factor, pointers and arrays, pointers and functions, pointers and structures.	6	CO5
	Total	30

Title of the Course/Paper	Subject Name	Category	L	T	P	S	Credits	Inst. Hours	Marks		
									CIA	External	Total
CC3	OBJECT ORIENTED PROGRAMMING CONCEPTS USING C++	Core	5	-	-	-	5	5	25	75	100
Course Objective											
LO1	Describe the procedural and object oriented paradigm with concepts of streams, classes, functions, data and objects										
LO2	Understand dynamic memory management techniques using pointers, constructors, destructors, etc										
LO3	Describe the concept of function overloading, operator overloading, virtual functions and polymorphism										
LO4	Classify inheritance with the understanding of early and late binding, usage of exception handling, generic programming										
LO5	Demonstrate the use of various OOPs concepts with the help of programs										
UNIT	Details									No. of Hours	
I	Introduction to C++ - key concepts of Object-Oriented Programming – Advantages–Object Oriented Languages–I/O in C++– C++ Declarations. Control Structures:- Decision Making and Statements: If ..else, jump, goto, break, continue, Switch case statements - Loops in C++ :for, while, do - functions in C++ - inline functions – Function Overloading.									15	
II	Classes and Objects: Declaring Objects – Defining Member Functions – Static Member variables and functions – array of objects – friend functions – Overloading member functions – Bit fields and classes – Constructor and destructor with static members.									15	
III	Operator Overloading: Overloading unary, binary operators – Overloading Friend functions – type conversion – Inheritance: Types of Inheritance – Single, Multilevel, Multiple, Hierarchical, Hybrid, Multi path inheritance – Virtual base Classes – Abstract Classes.									15	

IV	Pointers–Declaration–PointertoClass, Object–thispointer–Pointers	15
	to derived classes andBase classes – Arrays – Characteristics – array ofclasses – Memory models – new and deleteoperators – dynamic object – Binding, PolymorphismandVirtualFunctions.	
V	Files –Filestreamclasses –filemodes–Sequential Read /Writeoperations– BinaryandASCIIFiles–RandomAccessOperation–Templates –Exception Handling- String –Declaring andInitializingstringobjects– StringAttributes– Miscellaneousfunctions.	15
	Total	75

									CIA	External	Total
CC7	ProgrammingINJAVA	Core	4	-	-	-	4	4	25	75	100
CourseObjectives											
LO1	To provide fundamental knowledge of object-oriented programming										
LO2	To equip the student with programming knowledge in Core Java from the basics up.										
LO3	To enable the student to use AWT controls, Event Handling and Swing for GUI.										
LO4	To provide fundamental knowledge of object-oriented programming.										
LO5	To equip the student with programming knowledge in Core Java from the basics up.										
UNIT	Details							No. of Hours			
I	Introduction: Review of Object Oriented concepts- History of Java- Java buzz words- JVM Architecture- Data types- Variables- Scope and lifetime of variables - arrays- operators- control statements- type conversion and casting- simple java program- constructors- methods- Static block- Static Data- Static Method String and StringBuffer Classes.							15			
II	Inheritance: Basic concepts - Types of inheritance - Member access rules- Usage of this and Super keyword- Method Overloading- Method overriding- Abstract classes - Dynamic method dispatch - Usage of final keyword. Packages: Definition- Access Protection - Importing Packages. Interfaces: Definition- Implementation- Extending							15			

	Interfaces. Exception Handling: <i>try-catch-throw - throws-finally-</i> Built-in exceptions- Creating own Exception classes.	
III	Multithreaded Programming: Thread Class- Runnable interface- Synchronization- Using synchronized methods- Using synchronized statement- Interthread Communication- Deadlock. I/O Streams: Concepts of streams- Stream classes- Byte and Character stream- Reading console input and Writing Console output- File Handling.	15
IV	AWT Controls: The AWT class hierarchy- user interface components- Labels- Button- Text Components - Check Box - Check Box Group - Choice - List Box - Panels - Scroll Pane - Menu - Scroll Bar. Working with Frame class - Colour - Fonts and layout managers. Event Handling: Events- Event sources- Event Listeners - Event Delegation Model (EDM) - Handling Mouse and Keyboard Events - Adapter classes - Inner classes	15
V	Swing: Introduction to Swing- Hierarchy of swing components. Containers- Top level containers- JFrame- JWindow - JDialog - JPanel - JButton - JToggleButton - JCheckBox- JRadioButton- JLabel, JPasswordField- JTextArea- JList- JComboBox- JScrollPane.	15
	Total	75

									CIA	External	Total
CC8	Programming in java lab	Core	-	-	3	-	3	3	25	75	100
CourseObjective											
LO1	To provide fundamental knowledge of object-oriented programming.										
LO2	To equip the student with programming knowledge in Core Java from the basics up.										
LO3	To enable the student to know about Event Handling.										
LO4	To enable the student to use String Concepts.										
LO5	To equip the student with programming knowledge to create GUI using AWT controls.										
UNIT	Details										
1	Write a Java program that prompts the user for an integer and then prints out all the prime numbers up to that Integer										
2	Write a Java program to multiply two given matrices.										
3	Write a Java program that displays the number of characters, lines and words in a text										
4	Generate random numbers between two given limits using Random class and print messages according to the range of the value generated.										
5	Write a program to do String Manipulation using Character Array and perform the following string operations: a. String length b. Finding a character at a particular position c. Concatenating two strings										
6	Write a program to perform the following string operations using String class:										

	a. StringConcatenation b. Searchasubstring c. Toextractsubstringfromgivenstring	
7	WriteaprogramtoperformstringoperationsusingStringBufferclass: a. Lengthofa string b. Reverseastring c. Deleteasubstringfromthegivenstring	
8	Write a java program that implements a multi-thread application that has three threads. First thread generates random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.	
9	Write a threading program which uses the same method as synchronously to print the numbers 1 to 10 using Thread1 and to print 90 to 100 using Thread2.	
10	Write a program to demonstrate the use of following exceptions. a. ArithmeticException b. NumberFormatException c. ArrayIndexOutOfBoundsException d. NegativeArraySizeException	
11	Write a Java program that reads on file name from the user, then displays information about whether the file exists, whether the file is readable, whether the file is writable, the type of file and the length of the file in bytes	

12	Write a program to accept a text and change its size and font. Include bold, italic, options. Use frames and controls.	
13	Write a Java program that handles all mouse events and shows the event name at the center of the window when a mouse event is fired. (Use adapters).	
14	Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, *, % operations. Add a text field to display the result. Handle any possible exceptions like divide by zero.	
15	Write a Java program that simulates a traffic light. The program lets the user select one of three lights: red, yellow, or green with radio buttons. On selecting a button, an appropriate message with —stop! or —ready! or —go! should appear above the buttons in a selected color. Initially there is no message shown.

CC10	ASP.Net Programming	Core	5	-	-	-	4	5	25	75	100
Course Objective											
LO1	To identify and understand the goals and objectives of the .NET framework and ASP.NET with C# language.										
LO2	To develop ASP.NET Web application using standard controls.										
LO3	To implement file handling operations.										
LO4	To handle SQL Server Database using ADO.NET.										
LO5	Understand the GridView control and XML classes.										
UNIT	Details								No. of Hours		
I	Overview of .NET framework: Common Language Runtime (CLR), Framework Class Library - C# Fundamentals: Primitive types and Variables – Operators - Conditional statements - Looping statements – Creating and using Objects – Arrays – String operations.								15		
II	Introduction to ASP.NET - IDE - Languages supported Components - Working with Web Forms – Web form standard controls: Properties and its events – HTML controls - List Controls: Properties and its events.								15		
III	Rich Controls: Properties and its events – validation controls: Properties and its events – File Stream classes - File Modes – File Share – Reading and Writing to files – Creating, Moving, Copying and Deleting files – File uploading.								15		
IV	ADO.NET Overview – Database Connections – Commands – DataReader - DataAdapter - DataSets - Data Controls and								15		

	itsProperties–DataBinding	
V	Grid View control: Deleting, editing, Sorting and Paging.XMLclasses–WebformtomanipulateXMLfiles-WebsiteSecurity-Authentication-Authorization–Creating a Webapplication.	15
	Total	75

									CIA	External	Total
CC13	Computer Networks	CORE/ Elective	6	-	-	-	4	6	25	75	100
Course Objective											
LO1	To understand the concept of Data communication and Computer network										
LO2	To get a knowledge on routing algorithms.										
LO3	To impart knowledge about networking and inter networking devices										
LO4	To study about Network communication.										
LO5	To learn the concept of Transport layer										
UNIT	Details										No. of Hours
I	Introduction–Network Hardware–Software–Reference Models–OSI and TCP/IP Models – Example Networks: Internet, ATM, Ethernet and Wireless LANs–Physical Layer–Theoretical Basis for Data Communication–Guided Transmission Media										15
II	Wireless Transmission–Communication Satellites–Telephone System: Structure, Local Loop, Trunks and Multiplexing and Switching. Data Link Layer: Design Issues–Error Detection and Correction.										15
III	Elementary Data Link Protocols – Sliding Window Protocols – Data Link Layer in the Internet – Medium Access Layer – Channel Allocation Problem–Multiple Access Protocols–Bluetooth										15
IV	Network Layer–Design Issues–Routing Algorithms–Congestion Control Algorithms–IP Protocol–IP Addresses–Internet Control Protocols.										15
V	Transport Layer–Services–Connection Management–Addressing, Establishing and Releasing a Connection–Simple Transport Protocol–Internet Transport Protocols (ITP)–Network Security: Cryptography.										15
	Total										75
Course Outcomes							Programme Outcome				
CO	On completion of this course, students will										
1	To Understand the basics of Computer Network architecture, OSI and TCP/IP Reference model						PO1				

2	Togain knowledge on Telephone systems using wirelessnetwork	PO1,PO2

	MACHINE LEARNING LAB		-	-	4	-	4	25	75	100
Learning Objectives: To apply the concepts of Machine Learning to solve real-world problems and to implement basic algorithms in clustering & classification applied to text & numeric data										
LAB EXERCISES									Required Hour	
1. Solving Regression & Classification using Decision Trees 2. Root Node Attribute Selection for Decision Trees using Information Gain 3. Bayesian Inference in Gene Expression Analysis 4. Pattern Recognition Application using Bayesian Inference 5. Bagging in Classification 6. Bagging, Boosting applications using Regression Trees 7. Data & Text Classification using Neural Networks 8. Using Weka tool for SVM classification for chosen domain application 9. Data & Text Clustering using K-means algorithm 10. Data & Text Clustering using Gaussian Mixture Models									60	

Course Outcomes	
CO	On completion of this course, students will
CO1	Effectively use the various machine learning tools

CO2	Understand and implement the procedures for machine learning algorithms CO3
CO3	Design Python programs for various machine learning algorithms
CO4	Apply appropriate datasets to the Machine Learning algorithms
CO5	Analyze the graphical outcomes of learning algorithms with specific datasets

	Data Mining And Warehousing		5	-	-	-	4	5	25	75	100
CourseObjectives											
LO1	To provide the knowledge on Data Mining and Warehousing concepts and techniques										
LO2	To study the basic concepts of Data Mining, Architecture and Comparison.										
LO3	To study a set of Mining Association Rules, Data Warehouses.										
LO4	To study about Classification and Prediction, Classifier Accuracy										
LO5	To study the basic concepts of cluster analysis, Cluster Methods										
UNIT	Details							No. of Hours	Course Objectives		
I	Introduction: Data mining – Functionalities – Classification – Introduction to Data Warehousing – Data Preprocessing: Preprocessing the Data – Data cleaning – Data Integration and Transformation – Data Reduction							15	CO1		
II	Data Mining, Primitives, Languages and System Architecture: Data Mining – Primitives – Data Mining Query Language, Architecture of Data Mining Systems. Concept Description, Characterization and Comparison: Concept Description, Data Generalization and Summarization, Analytical Characterization, Mining Class Comparison – Statistical Measures.							15	CO2		
III	Mining Association Rules: Basic Concepts – Single Dimensional Boolean Association Rules From Transaction Databases, Multilevel Association Rules from transaction databases – Multi dimension Association Rules from Relational Database and Data							15	CO3		

	Warehouses.		
IV	Classification and Prediction: Introduction – Issues – Decision Tree Induction – Bayesian Classification – Classification of Back Propagation. Classification based on Concepts from Association Rule Mining – Other Methods. Prediction – Introduction – Classifier Accuracy	15	CO4
V	Cluster Analysis: Introduction – Types of Data in Cluster Analysis, Partitioning Methods – Hierarchical Methods - Density Based Methods – GRID Based Method – Model based Clustering Method	15	CO5
	Total	75	
Course Outcomes			
Course Outcomes	On completion of this course, students will;		
CO1	To understand the basic concepts and the functionality of the various data mining and data warehousing component	PO1, PO3, PO6, PO8	
CO2	To know the concepts of Data mining system architectures	PO1, PO2, PO3, PO6	
CO3	To analyze the principles of association rules	PO3, PO5	
CO4	To get an analytical idea on Classification and prediction methods	PO1, PO2, PO3, PO7	
CO5	To Gain knowledge on Cluster analysis and its methods.	PO2, PO6, PO7

SOFTWARE METRICS

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	6	-	-	-	5	6	25	75	100
Learning Objectives									
LO1	Gain a solid understanding of what software metrics are and their significance								
LO2	Learn how to identify and select appropriate software metrics based on project goals								
LO3	Acquire knowledge and skills in collecting and measuring software metrics								
LO4	Learn how to analyze and interpret software metrics data to extract valuable insights								
LO5	Gain the ability to evaluate software quality using appropriate metrics								
Unit	Contents							No. of Hours	
I	Fundamentals of Measurement: Need for Measurement: Measurement in Software Engineering, Scope of Software Metrics, The Basics of measurement: The representational theory of measurement, Measurement and models, Measurement scales and scale types, meaningfulness in measurement							12	
II	A Goal-Based Framework For Software Measurement: Classifying software measures, Determining what to Measure, Applying the framework, Software measurement validation, Performing Software Measurement Validation Empirical investigation: Principles of Empirical Studies, Planning Experiments, Planning case studies as quasi-experiments, Relevant and Meaningful Studies							12	
III	Software Metrics Data Collection: Defining good data, Data collection for incident reports, How to collect data, Reliability of data collection Procedures Analyzing software measurement data: Statistical distributions and hypothesis testing, Classical data analysis techniques, Examples of simple analysis techniques							12	
IV	Measuring internal product attributes: Size Properties of Software Size, Code size, Design size, Requirements analysis and Specifications size, Functionalsize measures and estimators, Applications of sizemeasures Measuring internal product attributes: Structure: Aspects of Structural Measures, Control flow structure of program units, Design-level Attributes, Object-oriented Structural attributes and measures							12	

V	Measuring External Product Attributes: Modelling software quality, Measuring aspectsof quality, Usability Measures,Maintainability measure s,Security Measures Software Reliability: Measurement and Prediction: Basicsof reliability theory, Thesoftware reliability problem, Parametric reliability growth models, Predictive accuracy	12
TOTAL		60
CO	Course Outcomes	
CO1	Understand various fundamentalsof measurement and software metrics	
CO2	Identify framework and analysis techniques for software measurement	
CO3	Apply internal and external attributes of software product for effort estimation	
CO4	Use appropriate analytical techniques to interpret software metrics data and derive meaningful insights	
CO5	Recommend reliability models for predicting software quality

	NATURAL LANGUAGE PROCESSING	Elect	4	-	-	-	3	25	75	100
Learning Objectives										
LO1	To understand approaches to syntax and semantics in NLP.									
LO2	To learn natural language processing and to learn how to apply basic algorithms in this field.									
LO3	To understand approaches to discourse, generation, dialogue and summarization within NLP.									
LO4	To get acquainted with the algorithmic description of the main language levels: morphology, syntax, semantics, pragmatic etc.									
LO5	To understand current methods for statistical approaches to machine translation.									
UNIT	Contents								No. Of. Hours	
I	Introduction : Natural Language Processing tasks in syntax, semantics, and pragmatics – Issue- Applications – The role of machine learning – Probability Basics – Information theory – Collocations -N-gram Language Models – Estimating parameters and smoothing – Evaluating language models.								12	
II	Word level and Syntactic Analysis: Word Level Analysis: Regular Expressions-Finite-State Automata-Morphological Parsing-Spelling Error Detection and correction- Words and Word classes-Part-of-Speech Tagging. Syntactic Analysis: Context-free Grammar-Constituency-Parsing-Probabilistic Parsing.								12	
III	Semantic analysis and Discourse Processing: Semantic Analysis: Meaning Representation-Lexical Semantics-Ambiguity-Word Sense Disambiguation. Discourse Processing: cohesion-Reference Resolution-Discourse Coherence and Structure.								12	
IV	Natural Language Generation: Architecture of NLG Systems-Generation Tasks and Representations- Application of NLG. Machine Translation: Problems in Machine Translation. Characteristics of Indian Languages- Machine Translation Approaches- Translation involving Indian Languages.								12	
V	Information retrieval and lexical resources: Information Retrieval:									

	Design features of Information Retrieval Systems-Classical, Non-classical, Alternative Models of Information Retrieval – valuation Lexical Resources: WorldNet-FrameNetStemmers-POSTagger-ResearchCorporaSSAS.	12
TOTAL		60
Course Outcomes		Programme Outcomes
CO	On completion of this course, students will	
CO1	Describe the fundamental concepts and techniques of natural language processing. Explain the advantages and disadvantages of different NLP technologies and their applicability in different business situations.	PO1, PO2, PO3, PO4, PO5, PO6
CO2	Distinguish among the various techniques, taking into account the assumptions, strengths, and weaknesses of each Use NLP technologies to explore and gain a broad understanding of text data.	PO1, PO2, PO3, PO4, PO5, PO6
CO3	Use appropriate descriptions, visualizations, and statistics to communicate the problems and their solutions. Use NLP methods to analyse sentiment of a text document.	PO1, PO2, PO3, PO4, PO5, PO6
CO4	Analyse large volume text data generated from a range of real-world applications. Use NLP methods to perform topic modelling.	PO1, PO2, PO3, PO4, PO5, PO6
CO5	Develop robotic process automation to manage business processes and to increase and monitor their efficiency and effectiveness. Determine the framework in which artificial intelligence and the Internet of things may function, including interactions with people, enterprise functions, and environments.	PO1, PO2, PO3, PO4, PO5, PO6
Textbooks

	ANALYTICS FOR SERVICE INDUSTRY	Elective	6	-	-	-	5	25	75	100
Learning Objectives										
LO1	Recognize challenges in dealing with datasets in service industry.									
LO2	Identify and apply appropriate algorithms for analyzing the healthcare, Human resource, hospitality and tourism data.									
LO3	Make choices for a model for new machine learning tasks.									
LO4	To identify employees with high attrition risk.									
LO5	To Prioritize various talent management initiatives for your organization.									
UNIT	Contents								No. Of. Hours	
I	Healthcare Analytics : Introduction to Healthcare Data Analytics- Electronic Health Records- Components of EHR- Coding Systems- Benefits of EHR- Barrier to Adopting HER Challenges- Phenotyping Algorithms. Biomedical Image Analysis and Signal Analysis- Genomic Data Analysis for Personalized Medicine. Review of Clinical Prediction Models.								12	
II	Healthcare Analytics Applications : Applications and Practical Systems for Healthcare- Data Analytics for Pervasive Health- Fraud Detection in Healthcare- Data Analytics for Pharmaceutical Discoveries- Clinical Decision Support Systems- Computer-Assisted Medical Image Analysis Systems- Mobile Imaging and Analytics for Biomedical Data.								12	
III	HR Analytics : Evolution of HR Analytics, HR information systems and data sources, HR Metric and HR Analytics, Evolution of HR Analytics; HR Metrics and HR Analytics; Intuition versus analytical thinking; HRMS/HRIS and data sources; Analytics frameworks like LAMP, HCM: 21(r) Model.								12	
IV	Performance Analysis : Predicting employee performance, Training requirements, evaluating training and development, Optimizing selection and promotion decisions.								12	

V	Tourism and Hospitality Analytics: Guest Analytics – Loyalty Analytics – Customer Satisfaction – Dynamic Pricing – optimized disruption management – Fraud detection in payments.	12
TOTAL HOURS		60
Course Outcomes		Programme Outcomes
CO	On completion of this course, students will	
CO1	Understand and critically apply the concepts and methods of business analytics	PO1, PO2, PO3, PO4, PO5, PO6
CO2	Identify, model and solve decision problems in different settings.	PO1, PO2, PO3, PO4, PO5, PO6
CO3	Interpret results/solutions and identify appropriate courses of action for a given managerial situation whether a problem or an opportunity.	PO1, PO2, PO3, PO4, PO5, PO6
CO4	Create viable solutions to decision-making problems.	PO1, PO2, PO3, PO4, PO5, PO6
CO5	Instill a sense of ethical decision-making and a commitment to the long-run welfare of both organizations and the communities they serve.	PO1, PO2, PO3, PO4, PO5, PO6

	Database Management System	Core	6	-	-	-	5	6	25	75	100
Course Objective											
LO1	To enable the student to learn the designing of database systems, foundation on the relational model of data and normal forms.										
LO2	To understand the concepts of database management system, design simple Database models										
LO3	To learn and understand to write queries using SQL, PL/SQL.										
LO4	To enable the student to learn the designing of database systems, foundation on the relational model of data and normal forms.										
LO5	To understand the concepts of database management system, design simple Database models										
UNIT	Details							No. of Hours			
	Database Concepts: Database Systems - Data vs Information - Introducing the database - File system - Problems with file system – Database systems. Data models - Importance - Basic Building Blocks - Business rules - Evolution of Data models - Degrees of Data Abstraction							12			
II	Design Concepts: Relational database model - logical view of data - keys - Integrity rules - relational set operators - data dictionary and the system catalog - relationships - data redundancy revisited - indexes - CODD's rules. Entity relationship model - ER diagram							12			
III	Normalization of Database Tables: Database tables							12			

	and Normalization – The Need for Normalization – TheNormalizationProcess–HigherlevelNormalForm. IntroductiontoSQL: DataDefinitionCommands–DataManipulationCommands–SELECTQueries–AdditionalDataDefinitionCommands–AdditionalSELECTQueryKeywords–JoiningDatabaseTables.	
IV	Advanced SQL: Relational SET Operators: UNION – UNIONALL–INTERSECT-MINUS.SQLJoin Operators: Cross Join – Natural Join – Join USINGClause – JOIN ON Clause – Outer Join. Sub Queriesand Correlated Queries: WHERE – IN – HAVING –ANY and ALL – FROM. SQL Functions: Date andTimeFunction–NumericFunction–StringFunction–ConversionFunction	12
V	PL/SQL: AProgrammingLanguage:History–Fundamentals – Block Structure – Comments – DataTypes – Other Data Types – Variable Declaration – Assignment operation –Arithmetic operators. ControlStructures and Embedded SQL: Control Structures –NestedBlocks–SQLinPL/SQL–DataManipulation – Transaction Control statements. PL/SQL Cursorsand Exceptions: Cursors – Implicit Cursors, ExplicitCursorsandAttributes–CursorFORloops–SELECT...FOR UPDATE – WHERE CURRENT OFclause – Cursor with Parameters – Cursor Variables –Exceptions–TypesofExceptions.	12
	Total	60
CourseOutcomes		ProgrammeOutcomes
CO	Oncompletionofthiscourse, studentswill	
1	UnderstandthevariousbasicconceptsofDataBase System.DifferencebetweenfilesystemandDBMS	PO1

	and compare various data models.	
2	Define the integrity constraints. Understand the basic concepts of Relational Data Model, Entity-Relationship Model.	PO1, PO2
3	Design database schema considering normalization and relationships within database. Understand and construct database using Structured Query Language. Attain a good practical skill of managing and retrieving of data using Data Manipulation Language (DML)	PO4, PO6
4	Classify the different functions and various join operations and enhance the knowledge of handling multiple tables.	PO4, PO5, PO6
5	Learn to design Database operations and implement using PL/SQL programs. Learn basics of PL/SQL and develop programs using Cursors, Exceptions	PO3, PO8

CourseObjectives											
LO1	Toknowtheobjectivesofinformationsecurity										
LO2	Understandthe importance andapplicationofeachofconfidentiality,integrity,authenticationand availability										
LO3	Understandvariouscryptographicalgorithms										
LO4	Understandthebasiccategoriesofthreatstocomputersandnetworks										
LO5	Tostudyabouttheconceptsofsecurityinnetworks,websecurity										
UNIT	Details						No.ofHours				
I	IntroductiontoInformationSecurity:Securitymindset, ComputerSecurityConcepts(CIA),Attacks,Vulnerabi litiesandprotections,SecurityGoals,SecurityServices, Threats,Attacks,Assets, malware,programanalysisandmechanisms						12				
II	TheSecurityProblemInComputing:Themeaningof computerSecurity,ComputerCriminals,Methodsof Defense.Cryptography:ConceptsandTechniques:I ntroduction,plaintextandciphertext,substitutiontec hniques,transpositiontechniques,encryptionandde cryption						12				
III	SymmetricandAsymmetricCryptographicTechniques: DES,AES,RSAlgorithms .AuthenticationandDigitalSignatures:UseofCryptograp hyforauthentication,Secure Hashfunction,Keymanagement–Kerberos						12				

IV	Program Security : Non-malicious Program errors – Bufferoverflow,Incompletemediation,Time-of-check to Time-of- use Errors, Viruses, Trapdoors,Salami attack, Man-in-the- middle attacks, Covertchannels.FileprotectionMechanisms,UserAuthenticationDesigningTrustedO.S:Securitypolicies,modelsofsecurity,trustedO.Sdesign,AssuranceintrustedO.S.Implementationexamples	12
V	SecurityinNetworks:Threatsinnetworks,Network SecurityControls– Architecture,Encryption,ContentIntegrity,Strong Authentication,AccessControls,WirelessSecurity, Honeypots, Traffic flow security. WebSecurity:Websecurityconsiderations,SecureSocketLayerandTransportLayerSecurity,Secureelectronictransaction	12
	Total	60
CourseOutcomes		
CourseOutcomes	Oncompletionofthiscourse, studentswill;	ProgrammeOutcomes
CO1	Understand network security threats, security services,andcountermeasures	PO1
CO2	Understand vulnerability analysis of network security	PO1,PO2
CO3	Acquirebackgroundonhashfunctions;authentication;firewalls;intrusiondetectiontechniques	PO4,PO6
CO4	Gainhands-onexperiencewithprogrammingandsimulationtechniquesforsecurityprotocols.	PO4,PO5,PO6
CO5	Applymethodsforauthentication,accesscontrol, intrusiondetectionandprevention	PO3,PO8

	Human Computer Interaction	Elective	6	-	-	-	5	6	25	75	100
Course Objective											
LO1	To learn about the foundations of Human Computer Interaction.										
LO2	To learn the design and software process technologies.										
LO3	To learn HCI models and theories.										
LO4	To learn Mobile Ecosystem.										
LO5	To learn the various types of Web Interface Design.										
UNIT	Details									No. of Hours	
I	FOUNDATIONS OF HCI: - The Human: I/O channels–Memory - Reasoning and problem solving; The Computer: Devices–Memory–processing and networks; - Interaction: Models– frameworks–Ergonomics–styles–elements–interactivity-Paradigms.-Case Studies									12	
II	DESIGN & SOFTWARE PROCESS: - Interactive Design: - Basics– process–scenarios - Navigation: screen design Iteration and prototyping. - HCI in software process: - Software life cycle – usability engineering – Prototyping in practice–design rationale. Design rules: principles, standards, guidelines, rules. Evaluation Techniques–Universal Design									12	

III	MODELS AND THEORIES: - HCI Models : Cognitive models:-Socio-Organizational issues and stakeholder requirements - Communication and collaboration models-Hypertext, Multimedia and WWW.	12
IV	Mobile HCI: - Mobile Ecosystem: Platforms, Application frameworks - Types of Mobile Applications: Widgets, Applications, Games - Mobile Information Architecture, Mobile 2.0, - Mobile Design: Elements of Mobile Design, Tools.- Case Studies	12
V	WEB INTERFACE DESIGN: Designing Web Interfaces – Drag & Drop, Direct Selection, Contextual Tools, Overlays, Inlays and Virtual Pages, Process Flow -Case Studies	12
Total		60
Course Outcomes		Programme Outcome
CO	On completion of this course, students will	
1	Understand the fundamentals of HCI.	PO1
2	Understand the design and software process technologies.	PO1, PO2
3	Understand HCI models and theories.	PO4, PO6
4	Understand Mobile Ecosystem, types of Mobile Applications, mobile Architecture and design.	PO4, PO5, PO6
5	Understand the various types of Web Interface Design.	PO3, PO8

UNIT	Details									No.of Hours	
I	Introduction:ModernizingProjectManagement:ProjectManagement Needed a Makeover –Introducing Agile Project Management. Applying the Agile Manifesto and Principles: Understanding the Agile manifesto – Outlining the four values of the Agile manifesto –Defining the 15 Agile Principles – Adding the Platinum Principles – Changes as a result of Agile Values –The Agile lit must test. Why Being Agile Works Better:Evaluating Agile benefits – How Agile approaches beat historical approaches – Why people like being Agile.									12	
II	Being Agile Agile Approaches: Diving under the umbrella of Agile approaches – Reviewing the Big Three: Lean, Scrum, Extreme Programming- Summary									12	

	Agile Environments in Action: Creating the physical environment – Low-tech communicating – High-tech communicating – Choosing tools. Agile Behaviours in Action: Establishing Agile roles – Establishing new values – Changing team philosophy.	
III	Agile Planning and Execution Defining the Product Vision and Roadmap: Agile planning – Defining the product vision – Creating a product roadmap – Completing the product backlog. Planning Releases and Sprints: Refining requirements and estimates – Release planning – Sprint planning. Working Throughout the Day: Planning your day – Tracking progress – Agile roles in the sprint – Creating shippable functionality – The end of the day. Showcasing Work, Inspecting and Adapting: The sprint review – The sprint retrospective. Preparing for Release: Preparing the product for deployment (the release print) – Preparing the operational support – Preparing the organization for product deployment – Preparing the marketplace for product deployment	12
IV	Agile Management Managing Scope and Procurement: What's different about Agile scope management – Managing Agile scope – What's different about Agile procurement – Managing Agile procurement. Managing Time and Cost: What's different about Agile time management – Managing Agile schedules – What's different about Agile cost management – Managing Agile budgets. Managing Team Dynamics and Communication: What's different about Agile team dynamics – Managing Agile team dynamics –	12

	What's	
	different about Agile communication – Managing Agile communication. Managing Quality and Risk: What's different about Agile quality – Managing Agile quality – What's different about Agile risk management – Managing Agile risk.	
V	Implementing Agile Building a Foundation: Organizational and individual commitment – Choosing the right pilot team members – Creating an environment that enables Agility – Support Agility initially and overtime. Being a Change Agent: Becoming Agile requires change – why change doesn't happen on its own – Platinum Edge's Change Roadmap – Avoiding pitfalls – Signs your changes are slipping. Benefits, Factors for Success and Metrics: Ten key benefits of Agile project management – Ten key factors for project success – Ten metrics for Agile Organizations.	12

	FUNDAMENTALS OF INFORMATION TECHNOLOGY	Specific Elective	2	-	-	-	2	25	75	100
Learning Objectives										
LO1	Understand basic concepts and terminology of information technology.									
LO2	Have a basic understanding of personal computers and their operation									
LO3	Be able to identify data storage and its usage									
LO4	Get great knowledge of software and its functionalities									
LO5	Understand about operating system and their uses									
UNIT	Contents								No.Of. Hours	
I	Introduction to Computers-Generation of Computer-Data and Information – Components of Computer – Software – Hardware – Input Devices-Output Devices—Types of Operating System.								6	
II	MS Word: Introduction-Elements of Window-Files, Folders and Directories – Text Manipulating: Cut, Copy, Paste, Drag and Drop – Text Formatting: Font – Style, Size, Face and Colors (Both foreground and background)-Alignment-Bullets and Numbering-Header and footer-watermark-inserting objects(images, other application document)-Table creation – Mail merge.								6	
III	Ms Excel: Introduction-Inserting rows and columns-Sizing rows and columns-Implementing formulas-Generating series-Functions in excel –Creation of Chart-Inserting objects-Filter-Sorting-Inserting worksheet.								6	
IV	MS PowerPoint: Introduction-Slides Manipulation(Inserting new, Copy, paste, delete and duplicate slides) – Slide show- Types of Views – Types of Animations-Inserting Objects-Implementing multimedia(Video and Audio)-Templates(Built-in and User-Defined).								6	
V	Internet: Introduction to Internet and Intranet-Services of Internet-Domain Name – URL – Browser – Types of Browsers – Search Engine -E-Mail – Basic Components of E-Mail –.How to send group mail.E-Commerce: Digital Signature-Digital Currency-Online shopping and transaction.								6	
TOTAL HOURS								30		
Course Outcomes								Programme Outcomes		
CO	On completion of this course, students will									

CO1	Learn the basics of computer, Construct the structure of the required things in computer, learn how to use it.	PO1, PO2, PO3, PO4, PO5, PO6
CO2	Develop organizational structure using for the devices present currently under input or output unit.	PO1, PO2, PO3, PO4, PO5, PO6
CO3	Concept of storing data in computer using two headers namely RAM and ROM with different types of ROM with advancement in storage basis.	PO1, PO2, PO3, PO4, PO5, PO6
CO4	Work with different software, Write program in the software and applications of software.	PO1, PO2, PO3, PO4, PO5, PO6
CO5	Usage of Operating system in information technology which really acts as an interpreter between software and hardware.	PO1, PO2, PO3, PO4, PO5, PO6

	SimulationandModeling	Specific Elective	2	-	-	-	2	2	25	75	100
Course Objectives											
LO1	Generates computer simulation technologies and techniques, lays the groundwork for students to comprehend computer simulation requirements, and implements and tests a variety of simulation and data analysis libraries and programmes. This course focuses on what is required to create simulation software environments rather than just simulations using pre-existing packages										
LO2	Discuss the concepts of modelling layers of critical infrastructure networks in society.										
LO3	Create tools for viewing and controlling simulations and their results.										
LO4	Understand the concept of Entity modelling, Path planning										
LO5	To learn about the Algorithms and Modelling.										
LO1	Details						No. of Hours				
I	Introduction To Modeling & Simulation – What is Modeling and Simulation – Complexity Types – Model Types – Simulation Types – M&S Terms and Definitions Input Data Analysis – Simulation Input Modeling – Input Data Collection- Data Collection Problems – Input Modeling Strategy- Histograms- Probability Distributions- Selecting a Probability Distribution.						6				

II	RandomVariateGeneration–RandomNumbers– RandomNumberGenerators–Generalprinciples– InverseTransformMethod–AcceptanceRejectionMethod– CompositionMethod–RelocateandRescaleMethod - Specific distributions-Output Data Analysis – Introduction-TypesofSimulationWithRespecttoOutput Analysis - Stochastic Process and Sample Path - SamplingandSystematicErrors-Mean,StandardDeviation and Confidence Interval - Analysis of Finite-Horizon Simulations - Single Run - Independent Replications-SequentialEstimation–Analysisof	6
----	---	---

	Steady-State Simulations-Removal of Initialization Bias (Warm-up Interval)-Replication-Deletion Approach-Batch-Means Method.	
III	Comparing Systems via Simulation-Introduction-Comparison Problems-Comparing Two Systems-Screening Problems - Selecting the Best - Comparison with a Standard - Comparison with a Fixed Performance Discrete Event Simulations – Introduction - Next-Event Time Advance - Arithmetic and Logical Relationships -Discrete-Event Modeling Approaches-Event-Scheduling Approach-Process Interaction Approach.	6
IV	Entity Modeling – Entity Body Modeling – Entity Body Visualization-Entity Body Animation-Entity Interaction Modeling-Building Modeling Distributed Simulation-High Level Architecture(HLA)-Federation Development and Execution Process(FEDEP)-SISOR PRFOM Behavior Modeling-General AI Algorithms-Decision Trees-Neural Networks - Finite State Machines - Logic Programming - Production Systems-Path Planning-Off-Line Path Planning - Incremental Path Planning - Real-Time Path Planning-Script Programming-Script Parsing-Script Execution.	6
V	Optimization Algorithms-Genetic Algorithms-Simulated Annealing Examples: Sensor Systems Modeling-Human Eye Modeling-Optical Sensor Modeling-Radar Modeling.	6
	Total	30

	UNDERSTANDING INTERNET	Specific Elective	2	-	-		2	25	75	100	
Learning Objectives											
LO1	Knowledge of Internet medium										
LO2	Internet as a mass medium										
LO3	Features of Internet Technology,										
LO4	Internet as a source of infotainment										
LO5	Study of internet audiences and about cybercrime										
UNIT	Contents								No. Of. Hours		
I	The emergence of internet as a mass medium – the world of ‘worldwide web’.								6		
II	Features of internet as a technology.								6		
III	Internet as a source of infotainment – classification based on content and style.								6		
IV	Demographic and psychographic descriptions of internet ‘audiences’ – effect of internet on the values and life-styles.								6		
V	Present issues such as cybercrime and future possibilities.								6		
TOTAL HOURS								30			
Course Outcomes								Programme Outcomes			
CO	On completion of this course, students will										
CO1	Knows the basic concept in internet Concept of mass medium and worldwide web								PO1, PO2, PO3, PO4, PO5, PO6		
CO2	Knows the concept of internet as a technology.								PO1, PO2, PO3, PO4, PO5, PO6		
CO3	Understand the concept of infotainment and classification based on content and style								PO1, PO2, PO3, PO4, PO5, PO6		
CO4	Can be able to know about Demographic and psychographic description of internet								PO1, PO2, PO3, PO4, PO5, PO6		
CO5	Understand the concept of cybercrime and future possibilities								PO1, PO2, PO3, PO4, PO5, PO6
