

B.Sc- Internet of Things Syllabus under CBCS Pattern with effect from 2023-2024 onwards

PERIYAR UNIVERSITY

PERIYAR PALKALAI NAGAR

SALEM-636011

DEGREE OF BACHELOR OF SCIENCE

Syllabus for

B.Sc., Internet of Things

(SEMESTER PATTERN- CBCS)

(For Candidates admitted in the colleges affiliated to

Periyar university from 2023-2024 onwards)

1. Introduction

B.Sc. Internet of Things

Education is the key to development of any society. Role of higher education is crucial for securing right kind of employment and also to pursue further studies in best available world class institutes elsewhere within and outside India. Quality education in general and higher education in particular deserves high priority to enable the young and future generation of students to acquire skill, training and knowledge in order to enhance their thinking, creativity, comprehension and application abilities and prepare them to compete, succeed and excel globally. Learning Outcomes-based Curriculum Framework (LOCF) which makes it student-centric, interactive and outcome-oriented with well-defined aims, objectives and goals to achieve. LOCF also aims at ensuring uniform education standard and content delivery across the state which will help the students to ensure similar quality of education irrespective of the institute and location.

Computer Science is the study of quantity, structure, space and change, focusing on problem solving, application development with wider scope of application in science, engineering, technology, social sciences etc. throughout the world in last couple of decades and it has carved out a space for itself like any other disciplines of basic science and engineering. Computer science is a discipline that spans theory and practice and it requires thinking both in abstract terms and in concrete terms. Nowadays, practically everyone is a computer user, and many people are even computer programmers. Computer Science can be seen on a higher level, as a science of problem solving and problem solving requires precision, creativity, and careful reasoning. The ever-evolving discipline of computer science also has strong connections to other disciplines. Many problems in science, engineering, health care, business, and other areas can be solved effectively with computers, but finding a solution requires both computer science expertise and knowledge of the particular application domain. Computer science has a wide range of specialties. These include Computer Architecture, Software Systems, Graphics, Artificial Intelligence, Computational Science, and Software Engineering. Drawing from a common core of computer science knowledge, each specialty area focuses on specific challenges. Computer Science is practiced by mathematicians, scientists and engineers. Mathematics, the origins of Computer Science, provides reason and logic. Science provides the methodology for learning and refinement. Engineering provides the techniques for building hardware and software.

The Students completing this programme will be able to present Software application clearly and precisely, make abstract ideas precise by formulating them in the Computer languages. Completion of this programme will also enable the learners to join teaching profession, enhance

their employability for government jobs, jobs in software industry, banking, insurance and investment sectors, data analyst jobs and jobs in various other public and private enterprises.

LEARNING OUTCOMES-BASED CURRICULUM FRAMEWORK GUIDELINES BASED REGULATIONS FOR UNDER GRADUATE PROGRAMME	
Programme:	B.Sc., Internet of Things
Programme Code:	
Duration:	3 years [UG]
Programme Outcomes:	PO1: Disciplinary knowledge: Capable of demonstrating comprehensive knowledge and understanding of one or more disciplines that form a part of an undergraduate Programme of study PO2: Communication Skills: Ability to express thoughts and ideas effectively in writing and orally; Communicate with others using appropriate media; confidently share one's views and express herself/himself; demonstrate the ability to listen carefully, read and write analytically, and present complex information in a clear and concise manner to different groups. PO3: Critical thinking: Capability to apply analytic thought to a body of knowledge; analyse and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence; identify relevant assumptions or implications; formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development. PO4: Problem solving: Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge; and apply one's learning to real life situations. PO5: Analytical reasoning: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyze and synthesize data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints. PO6: Research-related skills: A sense of inquiry and capability for asking relevant/appropriate questions, problem arising, synthesising and articulating; Ability to recognise cause-and-effect relationships, define problems, formulate hypotheses, test hypotheses, analyse, interpret and draw conclusions from data, establish hypotheses, predict cause-and-effect relationships; ability to plan, execute and report the results of an experiment or investigation PO7: Cooperation/Team work: Ability to work effectively and respectfully with diverse teams; facilitate cooperative or coordinated effort on the part of a group, and act together as a group or a team in the interests of a

	common cause and work efficiently as a member of a team PO8: Scientific reasoning: Ability to analyse, interpret and draw conclusions from quantitative/qualitative data; and critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective. PO9: Reflective thinking: Critical sensibility to lived experiences, with self awareness and reflexivity of both self and society. PO10 Information/digital literacy: Capability to use ICT in a variety of learning situations, demonstrate ability to access, evaluate, and use a variety of relevant information sources; and use appropriate software for analysis of data. PO 11 Self-directed learning: Ability to work independently, identify appropriate resources required for a project, and manage a project through to completion. PO 12 Multicultural competence: Possess knowledge of the values and beliefs of multiple cultures and a global perspective; and capability to effectively engage in a multicultural society and interact respectfully with diverse groups. PO 13: Moral and ethical awareness/reasoning: Ability to embrace moral/ethical values in conducting one's life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Capable of demonstrating the ability to identify ethical issues related to one's work, avoid unethical behaviour such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights; appreciating environmental and sustainability issues; and adopting objective, unbiased and truthful actions in all aspects of work. PO 14: Leadership readiness/qualities: Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination, in a smooth and efficient way. PO 15: Lifelong learning: Ability to acquire knowledge and skills, including „learning how to learn“, that are necessary for participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives, and adapting to changing trades and demands of work place through knowledge/skill development/reskilling.
Programme Specific Outcomes:	PSO1: To enable students to apply basic microeconomic, macroeconomic and monetary concepts and theories in real life and decision making. PSO 2: To sensitize students to various economic issues related to Development, Growth, International Economics, Sustainable Development and Environment. PSO 3: To familiarize students to the concepts and theories related to Finance, Investments and Modern Marketing. PSO 4: Evaluate various social and economic problems in the society and

	develop answer to the problems as global citizens. PSO 5: Enhance skills of analytical and critical thinking to analyze effectiveness of economic policies.

3 – Strong, 2- Medium, 1- Low

Highlights of the Revamped Curriculum:

- Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, devising mathematical models and algorithms for providing solutions to industry / real life situations. The curriculum also facilitates peer learning with advanced mathematical topics in the final semester, catering to the needs of stakeholders with research aptitude.
- The General Studies and Mathematics based problem solving skills are included as mandatory components in the ‘_Training for Competitive Examinations’ course at the final semester, a first of its kind.
- The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- The Industrial Statistics course is newly introduced in the fourth semester, to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.

- The Internship during the second year vacation will help the students gain valuable work experience, that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge to practical situations. The state of art technologies in conducting a Explain in a scientific and systematic way and arriving at a precise solution is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.
- State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest - Artificial Intelligence.

Value additions in the Revamped Curriculum:

Semester	Newly introduced Components	Outcome / Benefits
I	Foundation Course To ease the transition of learning from higher secondary to higher education, providing an overview of the pedagogy of learning Literature and analysing the world through the literary lens gives rise to a new perspective.	➤ Instill confidence among students ➤ Create interest for the subject
I, II, III, IV	Skill Enhancement papers (Discipline centric / Generic / Entrepreneurial)	➤ Industry ready graduates ➤ Skilled human resource ➤ Students are equipped with essential skills to make them employable
		➤ Training on language and communication skills enable the students gain knowledge and exposure in the competitive world.
		➤ Discipline centric skill will improve the Technical knowhow of solving real life problems.
III, IV, V & VI	Elective papers	➤ Strengthening the domain knowledge ➤ Introducing the stakeholders to the State-of Art techniques from the streams of multi- disciplinary, cross disciplinary and inter disciplinary nature ➤ Emerging topics in higher education/industry/ communication network / health sector etc. are introduced with hands-on-training.

IV	Elective Papers	➤ Exposure to industry moulds students into solution providers ➤ Generates Industry ready graduates ➤ Employment opportunities enhanced
V Semester	Elective papers	➤ Self-learning is enhanced ➤ Application of the concept to real situation is conceived resulting in tangible outcome
VI Semester	Elective papers	➤ Enriches the study beyond the course. ➤ Developing a research framework and presenting their independent and intellectual ideas effectively.
Extra Credits: For Advanced Learners / Honors degree		➤ To cater to the needs of peer learners / research aspirants
Skills acquired from the Courses		Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill

Credit Distribution for UG Programme

[illegible]

**Choice Based Credit System (CBCS), Learning Outcomes Based Curriculum Framework
(LOCF) Guideline Based Credit and Hours Distribution System
for all UG courses including Lab Hours**

First Year – Semester-I

Part	List of Courses	Credit	No. of Hours
Part-1	Language – Tamil	3	6
Part-2	English	3	6
Part-3	Core Courses & Elective Courses [in Total]	13	14
Part-4	Skill Enhancement Course SEC-1	2	2
	Foundation Course	2	2
Total		23	30

Semester-II

Part	List of Courses	Credit	No. of Hours
Part-1	Language – Tamil	3	6
Part-2	English	3	6
Part-3	Core Courses & Elective Courses including laboratory [in Total]	13	14

..

Note: For Semester I & II [if other department select our paper as Non Major Elective
choose from the above Skill Enhancement Course]

FIRST YEAR – SEMESTER – I

CORE – I: PRINCIPLES OF ELECTRONIC CIRCUIT DESIGN

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	5	0	0	I	4	5	25	75	100
Learning Objectives									
LO1	To enable the students to understand and gain the knowledge on Electronic Circuit Design Principles								
LO2	to acquaint the students with construction, theory and characteristics of the various kinds of electronic devices								
Prerequisites:									
Unit	Contents								No. of Hours
I	Fundamentals of Electronics: AC and DC Fundamentals- Resistors – Capacitors – Inductors – Series and parallel connections – Ohms Law – KCL- KVL – Super position theorem - Maximum power transfer theorem. Semiconductors- Types - Energy band Structure- Working and characteristics of PN Junction Diode- BJT- JFET- MOSFET- LED – LDR- Solar Cell- Photo Diode								15
II	Rectifiers and power supply: Rectifier – Half wave rectifier – full wave rectifier – bridge rectifier Compression - Filters – Capacitor Filter, Inductor Filter, L section and π section filters – Regulators –78XX and 79XX IC regulators – Single andDual regulated power supply design using IC regulators.								15
III	Amplifier: Definition – feedbacks – effect of negative feedback in amplifiers – Common emitter amplifier – Multistage amplifiers – RC Coupled amplifiers – Transformer coupled amplifier – Direct coupled amplifier – frequency response.								15
IV	Oscillator and Wave Shaping circuits: Condition for Oscillation – Barkhausen criterion – Types of Oscillators – Hartley oscillator – Colpitt’s oscillator – Crystal oscillator - RC phase shift oscillator – Astable Multivibrator – Mono stable Multivibrator – Bistable multivibrator – Schimit trigger – UJT Relaxation oscillator - Clipesr-Clampers.								15
V	Linear ICs: OpAmp: Ideal OpAmp – OpAmp Stages - OpAmp parameters – inverting and non inverting amplifiers – Adder and Subtractor – Multiplier and Divider – Differentiator – integrator - V to I and I to V converter – sample and hold circuit – Instrumentation amplifier. IC555 Timer: Pin details of IC 555 – Block Diagram – Astable multivibrator - Mono stable multivibrator – Bistable Multivibrator.								15
TOTAL								75	
CO	Course Outcomes								
CO1	Recognize the fundamental concepts of solid state devices								
CO2	Understand the types and characteristics of various rectifiers, filtersand regulators.								
CO3	Apply the operation of the devices on various amplifier designs								
CO4	Illustrate the functionality of different kinds of oscillator and waveshaping circuits								
CO5	Analyze the characteristics of the Linear IC’s in different aspects.

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	0	0	5	I	4	5	25	75	100

Learning Objectives

LO1	To enable the students to understand and gain the knowledge on Electronic Circuit Design Principles
LO2	to acquaint the students with construction, theory and characteristics of the various kinds of electronic devices

List of Experiments:

1. Data acquisition using Multimeter and oscillographic recorder
 2. Connect an LED to GPIO pin 25 and control it through the command line.
 3. Connect an LED to GPIO pin 24 and a Switch to GPIO 25 and control the LED with the switch.
 4. The state of LED should toggle with every press of the switch Use DHT11 temperature sensor and print the temperature and humidity of the room with an interval of 15 seconds
 5. Use joystick and display the direction on the screen
-
6. Use Light Dependent Resistor (LDR) and control an LED that should switch-on/off depending on the light.
 7. Create a traffic light signal with three colored lights (Red, Orange and Green) with a duty cycle of 5-2-10 seconds.
 8. Switch on and switch of a DC motor based on the position of a switch.
 9. Convert an analog voltage to digital value and show it on the screen.
 10. Create a door lock application using a reed switch and magnet and give a beep when the door is opened.
 11. Control a 230V device (Bulb) with Raspberry Pi using a relay.

12. Control a 230V device using a threshold temperature, using a temperature sensor.
13. Create an application that has three LEDs (Red, Green and white). The LEDs should follow the cycle (All Off, Red On, Green On, White On) for each clap (use sound sensor).
14. Create a web application for the above applications wherever possible with suitable modifications to get input and to send output.

CO	Course Outcomes
CO1	Recognize the fundamental concepts of solid state devices
CO2	Understand the types and characteristics of various rectifiers, filtersand regulators.
CO3	Apply the operation of the devices on various amplifier designs
CO4	Illustrate the functionality of different kinds of oscillator and waveshaping circuits

CO	Course Outcomes	
CO1	Identify and understands the function of different blocks of PICmicrocontroller.	
CO2	Understand the various instruction set programming techniques of PICmicrocontroller.	
CO3	Demonstrate the use of interrupts and other programming techniques related to micro-controllers.	
CO4	Analyze of RTOS based system design.	
CO5	Develop the programs for data transfer, arithmetic, logical and I/Oport operations.	
Textbooks		
➤	Embedded Systems Architecture, Programming and Design, - Rajkamal, TATAMcGraw- Hill, First reprint, 2003.

CORE – IV: EMBEDDED SYSTEMS LAB

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	0	0	5	I	4	5	25	75	100
Learning Objectives									
LO1	To develop the ability to design Microcomputer-based Embedded systems.								
LO2	To learn Microcomputer interfacing from both a Hardware and Software perspective								

List of Experiments:

1. Arithmetic and logical operation
2. Switch and LED interfacing.
3. 4X4 matrix Keypad interfacing
4. 7 Segment Display Interface
5. Single digit timer using seven segment displays.
6. Temperature measurement.
7. DAC interface.
8. ADC Interface.
9. LCD interface.
10. Stepper motor control.
11. Serial communication using RS232C.
12. Serial Communication using I2C Protocol
13. DC Motor speed control using PWM

CO	Course Outcomes
CO1	Identify the functionality of development boards to implement embedded application.
CO2	Understand basic concepts in the embedded computing systems area
CO3	Apply knowledge and demonstrate the various addressing modes and data transfer instructions.
CO4	Analyze assembly language programs; select appropriate assembler into machine a cross assembler utility microcontroller.
CO5	Evaluate assembly language programs and download the machine code that will provide solutions real-world control problems.

CORE – V: RFID AND SENSOR NETWORKS

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	5	0	0	I	4	5	25	75	100
Learning Objectives									
LO1	Understand and designing Radio frequency identification (RFID) systems, middleware architectures for real-world applications.								
LO2	Understanding RFID and related Architectures, RFID Principles and security issues								
LO3	Determine road map for transformation of flexible electronics from foils to textiles								
LO4	Understanding the implementation, challenges and design constraints of WSN								
LO5	Knowing about the MAC layer and routing protocols in WSN								
Prerequisites:									

Unit	Contents	No. of Hours
I	Introduction of RFID, Automatic Identification Systems, A Comparison of Different ID Systems, Components of an RFID System, Differentiation Features of RFID Systems, Transponder Construction Formats, Frequency, Range and Coupling , Active and Passive Transponders, Information Processing in the Transponder , Selection Criteria for RFID Systems, Fundamental Operating Principles.	15
II	Frequency Ranges and Radio Licensing Regulations, Coding and Modulation, Data Integrity, Multi-Access Procedures – Anticollision, Security of RFID Systems, Attacks on RFID Systems	15
III	Wireless Sensor Networks- Introduction, Challenges and Constraints, Applications, Node Architecture, Operating Systems, Physical Layer	15
IV	Medium Access Control: Characteristics of MAC Protocols in Sensor Networks, Contention- Free MAC Protocols, Contention-Based MAC Protocols, Network Layer: Various Routing Protocols.	15
V	Security in WSN: Challenges of Security in Wireless Sensor Networks, Security Attacks inSensor Networks, Protocols and Mechanisms for Security, IEEE 802.15.4 and ZigBee Security	15
TOTAL		75
CO	Course Outcomes	
CO1	Students will be familiar with RFID technology, various components involved.	
CO2	Getting familiar with various RFID standards, Students learn various Security issuesinvolved in RFID.	
CO3	Students learn about Wireless Sensor Networks	
CO4	Familiar with WSN protocols routing algorithms.	
CO5	Various Security issues involved in Wireless Sensor Networks	
Textbooks

CORE – VI: NETWORK SIMULATOR LAB

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	0	0	4	I	4	5	25	75	100
Learning Objectives									
LO1	To study various trace file formats of network simulators.								
LO2	To implement and compare various MAC layer and routing protocols.								
List of Experiments:									
1. Introduction to network simulators used for wireless Ad Hoc and Sensor Networks. 2. Introduction to TCL scripting: demonstration of one small network simulation script. 3. To study various trace file formats of network simulators. 4. To implement and compare various MAC layer protocols. 5. To implement and compare AODV and DSR routing algorithms in MANET 6. To implement DSDV routing algorithms in MANET 7. To implement signal strength based link management routing protocols. 8. To calculate and compare average throughput for various TCP variants 9. To implement and compare various routing protocols for wireless sensor networks									
CO	Course Outcomes								
CO1	Identify the functionality of development boards to implement embedded application.								
CO2	Understand basic concepts in the embedded computing systems area								
CO3	Apply knowledge and demonstrate the various addressing modes and data transfer instructions.								
CO4	Analyze assembly language programs; select appropriate assemble into machine a cross assembler utility microcontroller.

11. Temperature and Humidity sensor with Arduino

CO	Course Outcomes
CO1	To be able to design hardware for IoT on different platforms for devices that can be connected to internet
CO2	To be able to design software for IoT nodes and system
CO3	To develop understanding for IoT based system design for different situations
CO4	Recognize the functionality of micro controller, latest version processors and its applications
CO5	Acquire design thinking capability, ability to design a component with realistic constraints, to solve real world engineering problems and analyse the results.

CORE – IX: IMPLEMENTING IOT WITH RASPBERRY PI

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	5	0	0	I	4	5	25	75	100
Learning Objectives									
LO1	to be equipped with a solid theoretical foundation,systematic professional knowledge and strong practical skills in the Raspberry Pi.								
LO2	To design and deploy multiple IoT devices that could connect to the gateway.								
Prerequisites:									
Unit	Contents								No. of Hours
I	Getting Started with Raspberry Pi: Basic functionality of Raspberry Pi B+ board, setting up the board, configuration and use, implications of an operating system on the behavior of the Raspberry Pi as an IoT device, booting Raspberry Pi 3, Downloading an Operating System, format an SD								15

	card and booting the OS, Basics of Linux and its use, main features including navigating the file system and managing processes, text based user interface through the shell, overview of the graphic user interface for Raspian Linux distribution.	
II	Interfacing Hardware with the Raspberry Pi, Raspberry Pi Remote Access, operate the Raspberry Pi in —headless model, Bash Command line, operating Raspberry Pi without needing a GUI interface. Basics of the Python programming language , programming on the Raspberry Pi. Python on Raspberry Pi, Python Programming Environment, Python Expressions, Strings, Functions and Function arguments, Lists, List Methods, Control Flow.	15
III	Communication with devices through the pins of the Raspberry Pi, RPi.GPIO library, Python Functions, setting up the pins, General purpose IO Pins, Protocol Pins, GPIO Access, applying digital voltages, and generating Pulse Width Modulated signals, Tkinter Python library, accessing pins through a graphic user interface	15
IV	IoT Physical Servers and Cloud Offerings: Introduction to Cloud Storage models and communication APIs. Webserver – Web server for IoT, Cloud for IoT, Python web application framework. Designing a RESTful web API. Connecting to APIs	15
V	IoT Design using Raspberry Pi IoT Applications based on Pi, LAMP Web-server, GPIO Control over Web Browser, Creating Custom Web Page for LAMP, Communicating data using on-board module, Home automation using Pi, Node-RED, MQTT Protocol, Using Node-RED Visual Editor on Rpi	15
TOTAL		75
CO	Course Outcomes	
CO1	To learn the concept of Basic Concepts of Linux	
CO2	To understand Python Programming and libraries	
CO3	To apply the knowledge of basic concepts of Mobile Cloud Computing	
CO4	To analyze the development technology for IoT	
CO5	To design real time IoT Devices

CORE – VIII: RASPBERRY PI LAB

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	0	0	5	I	4	5	25	75	100

Learning Objectives

LO1 To design and deploy multiple IoT devices that could connect to the gateway.

List of Experiments:

1. Getting started with Raspberry Pi, Install Raspian on your SD card
2. Linux basic commands.
3. Coding simple programs in Python.
4. How to use Python-based IDE (integrated development environments) for the Raspberry Pi and how to trace and debug Python code on the device
5. How to have your Raspberry Pi interact with online services through the use of public APIs and SDKs
6. Understanding the connectivity of Raspberry-Pi with IR sensor. Write an application to detect obstacle and notify user using LEDs.
7. Design APP Using MIT App Inventor and Connect to Temperature Sensor

CO	Course Outcomes
CO1	To learn the concept of Basic Concepts of Linux
CO2	To understand Python Programming and libraries
CO3	To apply the knowledge of basic concepts of Mobile Cloud Computing
CO4	To analyze the development technology for IoT
CO5	To design real time IoT Devices

CORE – XI: NETWORK COMMUNICATION AND SECURITY

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	5	0	0	I	4	5	25	75	100
Learning Objectives									
LO1	To Describe various communications networks and their components, andto								
LO2	To Identify the function of a firewall, and how it keeps a computer secure and safe from viruses. Prepare a plan for anti-virus protection								
Prerequisites:									
Unit	Contents							No. of Hours	
I	Transmission Methods: Digital Signal Analog Transmission – Baud Rate - Analog Signal Digital Transmission – Parallel & Serial Communication – Asynchronous & Synchronous Communication – Simplex – Half Duplex - Full Duplex – Multiplexing - De-multiplexing - Types of Multiplexing.							15	
II	Network Topologies: Mesh Topology – Star Topology – Tree Topology – Ring – Bus – Hybrid – Basics of Switching – Router & Routing – Internet Topology – Architecture of an ISP – Logical Types of Topology.							15	
III	Network Protocols: OSI Model – Physical Layer – Data LinkLayer – Network Layer – Transport Layer – Session Layer – Presentation Layer – Application Layer – Overview of Network Protocols.							15	
IV	LAN Topologies: Introduction – LAN Hardware – Implementing LAN – Fast LANS - Nonstandard LANS – Extending LANS – Virtual LANS – Token Passing Networks – FDDI – MAN – WAN.							15	
V	Internet access & network security: Introduction – Dialup Access – Leased lines – DSL - Cable Modems – DTE – DCEInterface – RS-232 & RS-449 Interface – SONET. Network Security: Introduction – Types of Computer Attacks – Firewall – Virtual Private Network-Cryptography.							15	
TOTAL							75		
CO	Course Outcomes								
CO1	Identify the components associated with Transmission methods.								
CO2	Understand the complete network architecture, Topology andswitching and routing technologies.								
CO3	Illustrate the operations of various electronic circuits andtheir applications.								
CO4	Demonstrate the variousnetworks protocols and networkmanagement skills								
CO5	Evaluate the issues in providing Quality-Of-Service for network multimedia applications such as Internet, telephony& networksecurity

CORE XII: PYTHON PROGRAMMING

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
CC9	6	0	0	V	4	6	25	75	100
Learning Objectives									
LO1	Understand the concepts of Python programming.								
LO2	To apply the OOPs concept in PYTHON programming.								
LO3	To impart knowledge on demand and supply concepts								
LO4	Learn to solve basic programming problems.								
Unit	Contents							No. of Hours	
I	Basics of Python Programming: History of Python-Features of Python-Literal-Constants-Variables - Identifiers–Keywords-Built-in Data Types-Output Statements – Input Statements-Comments – Indentation-Operators-Expressions-Type conversions. Python Arrays: Defining and Processing Arrays – Array methods.							15	
II	Control Statements: Selection/Conditional Branching statements: if, if-else, nested if and if-elif-else statements. Iterative Statements: while loop, for loop, else suite in loop and nested loops. Jump Statements: break, continue and pass statements.							15	
III	Functions: Function Definition – Function Call – Variable Scope and its Lifetime-Return Statement. Function Arguments: Required Arguments, Keyword Arguments, Default Arguments and Variable Length Arguments-Recursion. Python Strings: String operations- Immutable Strings - Built-in String Methods and Functions - String Comparison. Modules: import statement- The Python module – dir() function – Modules and Namespace – Defining our own modules.							15	

IV	Lists: Creating a list -Access values in List-Updating values in Lists-Nested lists -Basic list operations-List Methods. Tuples: Creating, Accessing, Updating and Deleting Elements in a tuple – Nested tuples– Difference between lists and tuples. Dictionaries: Creating, Accessing, Updating and Deleting Elements in a Dictionary – Dictionary Functions and Methods - Difference between Lists and Dictionaries.	15
V	Python File Handling: Types of files in Python - Opening and Closing files- Reading and Writing files: write() and writelines() methods- append() method – read() and readlines() methods – with keyword – Splitting words – File methods - File Positions- Renaming and deleting files.	15
TOTAL		75
CO	Course Outcomes	
CO1	Outline the basic concepts in python language.	
CO2	Interpret different looping and conditional statements in python language	
CO3	Apply the various data types and identify the usage of control statements, loops, functions and Modules in python for processing the data	
CO4	Analyze and solve problems using basic constructs and techniques of python.	
CO5	Assess the approaches used in the development of interactive application.

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
CC10	0	0	6	V	4	6	25	75	100
Learning Objectives									
LO1	Understand the fundamentals of programming using Python, such as variables, data types, control structures, and functions.								
LO2	Learn how to use Python libraries and modules to solve problems.								
LO3	Practice writing Python code to solve real-world problems and build basic applications.								
LO4	Gain experience with common programming paradigms, such as object-oriented programming and functional programming.								
LO5	Understand best practices for debugging and testing code.								
List of Exercises									
1. Program using variables, constants, I/O statements in Python. 2. Program using Operators in Python. 3. Program using Conditional Statements. 4. Program using Loops. 5. Program using Jump Statements. 6. Program using Functions. 7. Program using Recursion. 8. Program using Arrays. 9. Program using Strings. 10. Program using Modules. 11. Program using Lists. 12. Program using Tuples. 13. Program using Dictionaries. 14. Program for File Handling.									
TOTAL								75	
CO	Course Outcomes								
CO1	Understand the significance of control statements, loops and functions in creating Simple programs.								
CO2	Interpret the core data structures available in python to store, process and sort the data.								
CO3	Develop the real time applications using python programming language.								
CO4	Analyze the real time problem using suitable python concepts.								
CO5	Assess the complex problems using appropriate concepts in python.

OBJECT ORIENTED PROGRAMMING USING C++

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	5	0	0	-	4	5	25	75	100
Learning Objectives									
LO1	To inculcate knowledge on Object-oriented concepts and programming using C++.								
LO2	Demonstrate the use of various OOPs concepts with the help of programs								
Unit	Contents								No. of Hours
I	OOP Paradigm – Concepts of OOP – Benefits of OOP - Object Oriented Languages – Applications of OOP – OOP Design: Using UML as a Design Tool Beginning with C++								15
II	Tokens, Expressions and Control Structures - Functions in C++ : Function Prototyping – Call by Reference - Return by Reference – Inline Function – Default Arguments – Const Arguments – Recursion – Function Overloading – Classes and Objects								15
III	Constructors and Destructors: Constructors – Parameterized Constructors – Multiple Constructors – Constructor with default Arguments – Copy Constructors – Dynamic Constructor – Destructors – Operator Overloading and Type Conversions: Operator Overloading – Overloading Unary Operators – Overloading Binary operators – Rules for Operator Overloading – Type Conversions								15
IV	Inheritance: Introduction – Types of Inheritance – Virtual Base Classes – Abstract Classes – Pointers - Virtual Function - Polymorphism								15
V	Templates: Class Templates – Function Templates – Overloading of template Function – Exception Handling								15
TOTAL								75	
CO	Course Outcomes								
CO1	Outline the C++ programming fundamentals and the concepts of object-oriented programming like object and class, Encapsulation, inheritance and polymorphism.								
CO2	Classify the control structures, types of constructors, inheritance and different type conversion mechanisms.								
CO3	Analyze the importance of object oriented programming features like polymorphism, reusability, generic programming, data abstraction and the usage of exception handling.								
CO4	Determine the use of object oriented features such as classes, inheritance and templates to develop C++ programs for complex problems.								
CO5	Create a program in C++ by implementing the concepts of object-oriented programming.

	0	0	5	-	4	5	25	75	100

Learning Objectives

LO1	To inculcate knowledge on Object-oriented concepts and programming using C++.
------------	---

L02	Demonstrate the use of various OOPs concepts with the help of programs
------------	--

List of Exercises

Exercises:

1. Working with Classes and Objects
2. Using Constructors and Destructors
3. Using Function Overloading
4. Using Operator Overloading
5. Using Type Conversions
6. Using Inheritance
7. Using Polymorphism
8. Using Console I/O
9. Using Templates
10. Using Exceptions

TOTAL **75**

CO	Course Outcomes
----	-----------------

C01	Understand the fundamentals of C++ programming structure
-----	--

C02	Identify the basic features of OOPS such as classes, objects, polymorphism, inheritance
-----	---

CO3	Analyze the concept of inheritance with the understanding of early and late binding, usage of exception handling, constructors, destructors, generic programming and type conversions
-----	---

CO4	Determine the use of various data structures such as stacks, queues and lists to solve various computing problems in C++ by incorporating OOPS concepts.
CO5	Develop a program in C++ with the concepts of object oriented programming to solve real-world problems.

DATA STRUCTURES

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	4	0	0	II	4	4	25	75	100

Learning Objectives

LO1	To become familiar with the various data structures and their applications
LO2	to increase the understanding of basic concepts of the design and use of algorithms

Prerequisites:

Unit	Contents	No. of Hours
I	Introduction and overview: Basic Terminology – Data Structures – Operations - Algorithms: Complexity – Time Space – Algorithmic Notation – Control Structures – Complexity of Algorithms – Notations Arrays: Representation – Operations - Linear Search – Binary Search	12
II	Stack: Representation – Arithmetic expressions: Polish Notation – Recursion: Towers of Hanoi - Queue – Priority Queue - Linked Lists: Introduction – Representation of Linked Lists – Traversing a Linked Lists – Searching a Linked List	12
III	Insertion into a Linked List – Deletion into Linked List – Header Linked Lists – Two-way Lists – Doubly Linked List - Trees : Binary Trees – Representation – Traversal using Recursion – Binary Search Trees	12
IV	Sorting : Bubble Sort Insertion Sort, Selection Sort, Merge Sort, Quick Sort, Heap Sort	12
V	Graph – Graph Theory Terminology – Sequential Representation – Warshall's Algorithm – Shortest Path – Linked Representation - Traversals – Dynamic Programming – All Pairs Shortest Path - Greedy – Knapsack – Back Tracking – 8 Queens	12
TOTAL		60

THEORY 100%

CO	Course Outcomes
CO1	Outline the different fundamental concepts of data structures
CO2	Make use of different memory representation for data storage and apply various operations

CO3	Construct an algorithm for different data structure operations.
CO4	Analyse the data structures applications.
CO5	Discover suitable techniques to provide solution for solving the problems.

PHP SCRIPTING – PRACTICAL

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	0	0	5	V	4	5	25	75	100
Learning Objectives									
LO1	To enable the students to understand, analyze and build dynamic webpages using PHP and jQuery with MySql database								
Prerequisites:									
Unit	Contents								No. of Hours
I	Introduction to PHP : Language Basics : Lexical Structure – Data Types – Variables - Expressions and Operators – Flow – Control statements – Embedding PHP in Web Pages Exercises: 1. Control Structures 2. Working with Forms.								15
II	Functions : Defining a function – Variable Scope - Function Parameters – Strings : Encoding and Escaping – Comparing Strings – Manipulating and Searching Strings – Arrays: Single and Multidimensional Arrays – Traversing Arrays – Sorting Exercises: 3. String Manipulations 4. Arrays 5. Functions 6. Sorting								15
III	Classes and Objects – Introspection – Serialization – Web Techniques: Processing Forms – Setting Response Headers – Maintaining State : Cookies and Session-Graphics Exercises: 7. Classes and Objects 8. Cookies and Sessions 9. Graphics								15
IV	Working with MySQL Database: Select data from a single table – Select data from multiple tables- Performing DML operations Exercises: 10. Working with single table 11. Working with multiple tables								15
V	jQuery Fundamentals: Requirements of jQuery- JavaScript Premier – jQuery Core – DOM Selection and Manipulation – Event Handling – HTML Forms and Data – jQuery with PHP Exercises: 12. Event Handling 13. Handling HTML Forms with jQuery								15
TOTAL								75	
CO	Course Outcomes								
CO1	Demonstrate simple programs using PHP and jQuery								
CO2	Apply the interface setup, styles & themes for the given application								
CO3	Analyze the problem and add necessary user interface components, multimedia components and web data source into the application								

CO4	Evaluate the results by implementing the correct techniques on the web form
CO5	Construct web applications with the facilitated components in PHP and jQuery

Software Quality Assurance

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	4	0	0	I	4	4	25	75	100
Learning Objectives									
LO1	To enable the students to learn the Concepts and Principles of SQA.								
LO2	To learn the principles of SQA and must be able to judge the quality of software.								
Prerequisites:									
Unit	Contents								No. of Hours
I	Introduction to software quality – Software modeling – Scope of the software quality program – Establishing quality goals – Purpose, quality of goals – SQA planning software – Productivity and documentation.								12
II	Software quality assurance plan – Purpose and Scope, Software quality assurance management -Organization – Quality tasks – Responsibilities – Documentation.								12
III	Standards, Practices, Conventions and Metrics, Reviews and Audits – Management, Technical - review – Software inspection process – Walk through process – Audit process – Test processes –ISO, CMM compatibility – Problem reporting and corrective action.								12
IV	Tools, Techniques and methodologies, Code control, Media control, Supplier control, Records collection, Maintenance and retention, Training and risk management								12
V	ISO 9000 model, CMM model, Comparisons, ISO 9000 weaknesses, cmm weaknesses, SPICE –Software process improvement and capability determination.								12
TOTAL								60	
CO	Course Outcomes								
CO1	Understand the basics of software quality, modeling, and software qualityassurance planning software.								
CO2	Knowledge on software quality assurance plan, quality tasks and documentation.								
CO3	Understand the standards, practices, metrics, software inspection process, ISOCMM.								
CO4	Understand the tools and techniques in software quality control, maintenance andtraining, risk management.								
CO5	Knowledge in software quality standards and standard ISO 9000 model and itsweakness, SPICE.

SOFTWARE ENGINEERING

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
	5	0	0	V	3	5	25	75	100
Learning Objectives									
LO1	This paper familiarizes the students about the processes, forms, tasks, techniques and tools involved in Software Engineering								
LO2	To use the necessary for software engineering practice.								
Prerequisites:									
Unit	Contents								No. of Hours
I	Introduction to Software Engineering: Definition - The changing nature of software - Software Myths - Terminologies - Role of Management in Software Development - Software Life Cycle Models: The Waterfall Model - Increment Process Model - Evolutionary Process Model - The Unified Process.								15
II	Software Requirements Analysis and Specifications: Requirements Engineering - Type of Requirements - Feasibility Studies - Requirements Elicitation - Requirements Analysis - Requirements Documentation - Requirements Validation.								15
III	Software Project Planning: Size Estimation - Cost Estimation - The Constructive Cost Model (COCOMO) - COCOMO II - The Putnam Resource Allocation Model - Software Risk Management - Software Design: Definition - Modularity - Strategy of								15

	Design - Function Oriented Design.	
IV	Software Testing: A Strategic Approach to Software Testing - Terminologies - Functional Testing - Structural Testing - Levels of Testing - Validation Testing - Testing Tools.	15
V	Software Reliability: Basic Concepts - Software Quality - McCall Software Quality Model - Boehm Software Quality Model - Capability Maturity Model - Software Maintenance: Definition - Process - Models - Configuration Management - Documentation.	15
TOTAL		75

THEORY & PROBLEM

CO	Course Outcomes
CO1	Define the basic terminologies involved in the entire software developmental life cycle
CO2	Identify suitable models, techniques and tools for the development of a software product
CO3	Apply software engineering perspective through requirements analysis, software design and construction, verification, and validation to develop solutions to modern problems
CO4	Compare and contrast different process, cost, quality models and testing techniques
CO5	Estimate the project cost using suitable cost estimation models, rate the software risks and evaluate management strategies for effective software development

SOFTWARE ENGINEERING LAB

Subject Code	L	T	P	S	Credits	Inst. Hours	Marks		
							CIA	External	Total
CC10	0	0	5	V	4	5	25	75	100
Learning Objectives									
LO1	To Impart Practical Training in Software Engineering								
LO2	To understand about different Software Testing								
LO3	Learn to write test cases using different testing techniques.								
List of Exercises									
Do the following 8 exercises for any project projects (Eg. Student Portal, Online exam registration)									
1) Development of problem statement.									
2) Preparation of Software Requirement Specification Document.									
3)Preparation of Software Configuration Management and Risk Management related documents.									
4) Draw the entity relationship diagram									
5) Draw the data flow diagrams at level 0 and level 1									
6) Draw use case diagram									
7) Draw activity diagram of all use cases.									
8) Performing the Design by using any Design phase CASE tools.									
9) Develop test cases for unit testing and integration testing									
10) Develop test cases for various white box and black box testing techniques									
TOTAL								75	
CO	Course Outcomes								
CO1	An ability to use the methodology and tools necessary for engineering practice.								
CO2	Abilityto elicit, analyze and specify software requirements.								
CO3	Analyze and translate specifications into a design.								
CO4	Abilityto derive test cases for different testing.								
CO5	Apply software engineering perspective through requirements analysis, software design and construction, verification, and validation to develop solutions to modern problems

NETWORK SECURITY

Subject Code	L	T	P	S	Credits	Inst.	Marks
--------------	---	---	---	---	---------	-------	-------

						Hours	C I A	Ex ter nal	Tot al
	-	5	-	-	4	5	25	75	100
Learning Objectives									
LO1	To familiarize on the model of network security, Encryption techniques								
LO2	To understand the design concept of cryptography and authentication								
LO3	To develop experiments on algorithm used for security								
LO4	To understand about virus and threats, firewalls, and implementation of Cryptography								
UNIT	Details							No. of Hours	
I	Model of network security – Security attacks, services and attacks – OSI security architecture – Classical encryption techniques – DES – Block cipher PrinciplesDES – Strength of DES – Block cipher design principles – Block cipher mode of operation – Evaluation criteria for AES – RC4 - Differential and linear cryptanalysis – Placement of encryption function – traffic confidentiality.							15	
II	Number Theory – Prime number – Modular arithmetic – Euclid’s algorithm - Fermet’s and Euler’s theorem – Primality – Chinese remainder theorem – Discrete logarithm – Public key cryptography and RSA – Key distribution – Key management – Diffie Hellman key exchange – Elliptic curve cryptography							15	
III	Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC – SHA - HMAC – CMAC - Digital signature and authentication protocols – DSS.							15	
IV	Authentication applications – Kerberos – X.509 Authentication services - E- mail security – IP security - Web security							15	
V	Intruder – Intrusion detection system – Virus and related threats – Countermeasures – Firewalls design principles – Trusted systems – Practical implementation of cryptography and security							15	
	Total							75	
Course Outcomes									
Cours e Outco mes	On completion of this course, students will;								
CO1	Understand public-key cryptography, RSA and other public-key cryptosystems such as Diffie-Hellman Key Exchange, ElGamal Cryptosystem.								
CO2	Understand the security issues.								
CO3	Apply key management and distribution schemes design. User Authentication								
CO4	Analyze and design hash and MAC algorithms, and digital signatures. Analyze and design classical encryption techniques and block ciphers.								
CO5	Assess Intruders and Intruder Detection mechanisms, Types of Malicious software,

	NATURAL LANGUAGE PROCESSING	Elect	4	-	-		3	25	75	100
Learning Objectives										
LO1	To understand approaches to syntax and semantics in NLP.									
LO2	To learn natural language processing and to learn how to apply basic algorithms in this field.									
LO3	To understand approaches to discourse, generation, dialogue and summarization within NLP.									
LO4	To get acquainted with the algorithmic description of the main language levels: morphology, syntax, semantics, pragmatics etc.									
LO5	To understand current methods for statistical approaches to machine translation.									
UNIT	Contents								No. Of. Hours	
I	Introduction : Natural Language Processing tasks in syntax, semantics, and pragmatics – Issue- Applications – The role of machine learning – Probability Basics –Information theory – Collocations -N-gram Language Models – Estimating parameters and smoothing – Evaluating language models.								12	
II	Word level and Syntactic Analysis: Word Level Analysis: Regular Expressions-Finite-State Automata-Morphological Parsing-Spelling Error Detection and correction-Words and Word classes-Part-of Speech Tagging.Syntactic Analysis: Context-free Grammar-Constituency-Parsing-Probabilistic Parsing.								12	
III	Semantic analysis and Discourse Processing: Semantic Analysis: Meaning Representation-Lexical Semantics- Ambiguity-Word Sense Disambiguation. Discourse Processing: cohesion-Reference Resolution- Discourse Coherence and Structure.								12	
IV	Natural Language Generation: Architecture of NLG Systems- Generation Tasks and Representations- Application of NLG. Machine Translation: Problems in Machine Translation. Characteristics of Indian Languages- Machine Translation Approaches- Translation involving Indian Languages.								12	
V	Information retrieval and lexical resources: Information Retrieval: Design features of Information Retrieval Systems-Classical, Non-classical, Alternative Models of Information Retrieval – valuation Lexical Resources: WorldNet-Frame NetStemmers- POS Tagger- Research Corpora SSAS.								12	
Course Outcomes								Programme Outcomes		
CO	On completion of this course, students will									
CO1	Describe the fundamental concepts and techniques of natural language processing. Explain the advantages and disadvantages of different NLP technologies and their applicability in different business situations.									
CO2	Distinguish among the various techniques, taking into account the assumptions, strengths, and weaknesses of each Use NLP technologies to explore and gain a broad understanding of text data.									

CO3	Use appropriate descriptions, visualizations, and statistics to communicate the problems and their solutions. Use NLP methods to analyse sentiment of a text document.
CO4	Analyze large volume text data generated from a range of real-world applications. Use NLP methods to perform topic modelling.
CO5	Develop robotic process automation to manage business processes and to increase and monitor their efficiency and effectiveness. Determine the framework in which artificial intelligence and the Internet of things may function, including interactions with people, enterprise functions, and environments.

ANALYTICS FOR SERVICE INDUSTRY

Subject Code	Category	L	T	P	S	Credits	Marks		
							CIA	External	Total
	Elect	4	-	-	-	3	25	75	100
Learning Objectives									
LO1	Recognize challenges in dealing with data sets in service industry.								
LO2	Identify and apply appropriate algorithms for analyzing the healthcare, Human resource, hospitality and tourism data.								
LO3	Make choices for a model for new machine learning tasks.								
LO4	To identify employees with high attrition risk.								
LO5	To Prioritizing various talent management initiatives for your organization.								
UNIT	Contents							No. Of. Hours	
I	Healthcare Analytics : Introduction to Healthcare Data Analytics- Electronic Health Records– Components of EHR- Coding Systems- Benefits of EHR- Barrier to Adopting HER Challenges-Phenotyping Algorithms. Biomedical Image Analysis and Signal Analysis- Genomic Data Analysis for Personalized Medicine. Review of Clinical Prediction Models.							12	
II	Healthcare Analytics Applications : Applications and Practical Systems for Healthcare– Data Analytics for Pervasive Health- Fraud Detection in Healthcare- Data Analytics for Pharmaceutical Discoveries- Clinical Decision Support Systems- Computer- Assisted Medical Image Analysis Systems- Mobile Imaging and Analytics for Biomedical Data.							12	
III	HR Analytics: Evolution of HR Analytics, HR information systems and data sources, HR Metric and HR Analytics, Evolution of HR Analytics; HR Metrics and HR Analytics; Intuition versus analytical thinking; HRMS/HRIS and data sources; Analytics frameworks like LAMP, HCM:21(r) Model.							12	
IV	Performance Analysis: Predicting employee performance, Training requirements, evaluating training and development, Optimizing selection and promotion decisions.							12	
V	Tourism and Hospitality Analytics: Guest Analytics – Loyalty Analytics – Customer Satisfaction – Dynamic Pricing – optimized disruption management – Fraud detection in payments.							12	
TOTAL HOURS							60		
Course Outcomes									
CO	On completion of this course, students will								
CO1	Understand and critically apply the concepts and methods of business analytics								
CO2	Identify, model and solve decision problems in different settings.								
CO3	Interpret results/solutions and identify appropriate courses of action for a given managerial situation whether a problem or an opportunity.								
CO4	Create viable solutions to decision making problems.								
CO5	Instill a sense of ethical decision-making and a commitment to the long-run welfare of both organizations and the communities they serve.								
Textbooks

CRYPTOGRAPHY

II	Classical Encryption Techniques: Symmetric cipher model – Substitution Techniques: Caesar Cipher – Monoalphabetic cipher – Play fair cipher – Poly Alphabetic Cipher – Transposition techniques – Stenography	12
III	Block Cipher and DES: Block Cipher Principles – DES – The Strength of DES – RSA: The RSA algorithm.	12
IV	Network Security Practices: IP Security overview - IP Security architecture – Authentication Header. Web Security: SecureSocket Layer and Transport Layer Security – Secure Electronic Transaction.	12
V	Intruders – Malicious software – Firewalls.	12
TOTAL HOURS		60
Course Outcomes		Programme Outcomes
CO	On completion of this course, students will	
CO1	Analyze the vulnerabilities in any computing system and hence be able to design a security solution.	PO1, PO2, PO3, PO4, PO5, PO6
CO2	Apply the different cryptographic operations of symmetric cryptographic algorithms	PO1, PO2, PO3, PO4, PO5, PO6
CO3	Apply the different cryptographic operations of public key cryptography	PO1, PO2, PO3, PO4, PO5, PO6
CO4	Apply the various Authentication schemes to simulate different applications.	PO1, PO2, PO3, PO4, PO5, PO6
CO5	Understand various Security practices and System security standards	PO1, PO2, PO3, PO4, PO5, PO6

IV	Edge Data storage Security: Edge-Based Attack Detection and Prevention-Edge Computing Use Cases and Case Studies: Edge Computing High- Potential Use Cases. Introduction to green computing –Calculating carbon footprint- Choosing Green PC path: A green make over – Buying green computer- Choosing Earth Friendly peripherals	12
V	Fog Computing: Introduction to Fog computing – Architecture - Characteristics - Fog Computing Services – Fog Resource Estimation and Its Challenges-Fog computing on 5G networks – Fog computing Use cases and Case studies.	12
	Total	60
Course Outcomes		
CO	On completion of this course, students will	
1	Outline the concepts, applications, benefits and limitations of various computing paradigms.	
2	Classify the computing technologies based on its architecture and infrastructure and identify its strategies.	
3	Examine various cloud services, Security threat exposure within a cloud computing infrastructure.	
4	Asses the problems and solutions involved in various stages of different computing environments.	
5	Discuss the importance of cloud, edge and Fog technology and implement innovative ideas and practices for regulating green IT.	
Text Book

	Artificial Neural Networks	Core	-	Y	-	-	3	4	25	75	100
Course Objective											
C1	Understand the basics of artificial neural networks, learning process, single layer and multi-layer perceptron networks.										
C2	Understand the Error Correction and various learning algorithms and tasks.										
C3	Identify the various Single Layer Perception Learning Algorithm.										
C4	Identify the various Multi-Layer Perception Network.										
C5	Analyze the Deep Learning of various Neural network and its Applications.										
UNIT	Details									No. of Hours	
I	Artificial Neural Model- Activation functions- Feed forward and Feedback, Convex Sets, Convex Hull and Linear Separability, Non-Linear Separable Problem - Multilayer Networks. Learning Algorithms- Error correction - Gradient Descent Rules, Perception Learning Algorithm, Perception Convergence Theorem.									12	
II	Introduction, Error correction learning, Memory-based learning,									15	

	Hebbian learning, Competitive learning, Boltzmann learning, credit assignment problem, Learning with and without teacher, learning tasks, Memory and Adaptation.	
III	.Single layer Perception: Introduction, Pattern Recognition, Linear classifier, Simple perception, Perception learning algorithm, Modified Perception learning algorithm, Adaptive linear combiner, Continuous perception, Learning in continuous perception. Limitation of Perception.	12
IV	Multi-Layer Perception Networks: Introduction, MLP with 2 hidden layers, Simple layer of a MLP, Delta learning rule of the output layer, Multilayer feed forward neural network with continuous perceptions, Generalized delta learning rule, Back propagation algorithm	12
V	Deep learning- Introduction- Neuro architectures building blocks for the DL techniques, Deep Learning and Neocognitron, Deep Convolutional Neural Networks, Recurrent Neural Networks (RNN), feature extraction, Deep Belief Networks, Restricted Boltzman Machines, Training of DNN and Applications	12
	Total	60
Course Outcomes		Programme Outcome
CO	On completion of this course, students will	
1	Students will learn the basics of artificial neural networks with single layer and multi-layer perception networks.	PO1
2	Learn about the Error Correction and various learning algorithms and tasks.	PO1, PO2
3	Learn the various Perception Learning Algorithm.	PO4, PO6
4	Learn about the various Multi-Layer Perception Network.	PO4, PO5, PO6
5	Understand the Deep Learning of various Neural network and its Applications.	PO3, PO8

	Agile Project Management	Elective	-	Y	-	-	3	4	25	75	100
Course Objective											
C1	Learning of software design, software technologies and APIs.										
C2	Detailed demonstration about Agile development and testing techniques.										
C3	Learning about Agile Planning and Execution.										
C4	Learning of Agile Management Design and Quality Check.										
C5	Detailed examination of Agile development and testing techniques.										
UNIT	Details									No. of Hours	
I	Introduction:Modernizing Project Management: Project Management Needed a Makeover – Introducing Agile Project Management. Applying the Agile Manifesto and Principles: Understanding the Agile manifesto – Outlining the four values of the Agile manifesto – Defining the 15 Agile Principles – Adding the Platinum Principles – Changes as a result of Agile Values – The Agile litmus test. Why Being Agile Works Better: Evaluating Agile benefits – How Agile approaches beat historical approaches – Why people like being Agile.									12	
II	Being Agile Agile Approaches: Diving under the umbrella of Agile approaches – Reviewing the Big Three: Lean, Scrum, Extreme Programming - Summary Agile Environments in Action: Creating the physical environment – Low-tech communicating – High-tech communicating – Choosing tools. Agile Behaviours in Action: Establishing Agile roles – Establishing new values – Changing team philosophy.									12	

III	Agile Planning and Execution Defining the Product Vision and Roadmap: Agile planning – Defining the product vision – Creating a product roadmap – Completing the product backlog. Planning Releases and Sprints: Refining requirements and estimates – Release planning – Sprint planning. Working Throughout the Day: Planning your day – Tracking progress – Agile roles in the sprint – Creating shippable functionality – The end of the day. Showcasing Work, Inspecting and Adapting: The sprint review – The sprint retrospective. Preparing for Release: Preparing the product for deployment (the release sprint) – Preparing the operational support – Preparing the organization for product deployment - Preparing the marketplace for product deployment	12
IV	Agile Management Managing Scope and Procurement: What’s different about Agile scope management – Managing Agile scope – What’s different about Agile procurement – Managing Agile procurement. Managing Time and Cost: What’s different about Agile time management – Managing Agile schedules – What’s different about Agile cost management – Managing Agile budgets. Managing Team Dynamics and Communication: What’s different about Agile team dynamics – Managing Agile team dynamics – What’s different about Agile communication – Managing Agile communication. Managing Quality and Risk: What’s different about Agile quality – Managing Agile quality – What’s different about Agile risk management – Managing Agile risk.	12
V	Implementing Agile Building a Foundation: Organizational and individual commitment – Choosing the right pilot team members – Creating an environment that enables Agility – Support Agility initially and over time. Being a Change Agent: Becoming Agile requires change – why change doesn’t happen on its own – Platinum Edge’s Change Roadmap – Avoiding pitfalls – Signs your changes are slipping. Benefits, Factors for Success and Metrics: Ten key benefits of Agile project management – Ten key factors for project success – Ten metrics for Agile Organizations.	12
	Total	60
Course Outcomes		
CO	On completion of this course, students will	
1	Understanding of software design, software technologies and APIs using Agile Management.	
2	Understanding of Agile development and testing techniques.	
3	Understanding about Agile Planning and Execution using Sprint.	

4	Understanding of Agile Management Design, scope , Procurement, managing Time and Cost and Quality Check.
5	Analysing of Agile development and testing techniques.

SEC1	OFFICE AUTOMATION	Specific Elective		Y	-	-	2	2	25	75	100
Course Objective											
C1	Understand the basics of computer systems and its components.										
C2	Understand and apply the basic concepts of a word processing package.										
C3	Understand and apply the basic concepts of electronic spreadsheet software.										
C4	Understand and apply the basic concepts of database management system.										
C5	Understand and create a presentation using PowerPoint tool.										
UNIT	Details										No. of Hours
I	Introductory concepts: Memory unit– CPU-Input Devices: Key board, Mouse and Scanner. Output devices: Monitor, Printer. Introduction to Operating systems & its features: DOS– UNIX–Windows. Introduction to Programming Languages.										6
II	Word Processing: Open, Save and close word document; Editing text – tools, formatting, bullets; Spell Checker - Document formatting – Paragraph alignment, indentation, headers and footers, numbering; printing–Preview, options, merge.										6
III	Spreadsheets : Excel–opening, entering text and data, formatting, navigating; Formulas–entering, handling and copying; Charts–creating, formatting and printing, analysis tables, preparation of financial statements, introduction to data analytics.										6
IV	Database Concepts: The concept of data base management system; Data field, records, and files, Sorting and indexing data; Searching records. Designing queries, and reports; Linking of datafiles; Understanding Programming environment in DBMS; Developing menu drive applications in query language (MS–Access).										6
V	Power point: Introduction to Power point - Features – Understanding slide typecasting & viewing slides – creating slide shows. Applying special object – including objects & pictures – Slide transition–Animation effects, audio inclusion, timers.										6

I	Introduction: Notion of algorithms and programs – Requirements for solving problems by computer – The problem-solving aspect: Problem definition phase, Getting started on a problem, The use of specific examples, Similarities among problems, Working backwards from the solution – General problem-solving strategies - Problem solving using top-down design – Implementation of algorithms – The concept of Recursion.	6
II	Fundamental Algorithms: Exchanging the values of two variables – Counting - Summation of a set of numbers - Factorial computation - Sine function computation - Fibonacci Series generation - Reversing the digits of an integer – Base Conversion.	6
III	Factoring Methods: Finding the square root of a number – The smallest divisor of an integer – Greatest common divisor of two integers - Generating prime numbers – Computing the prime factors of an integer – Generation of pseudo-random numbers - Raising a number to a large power – Computing the n th Fibonacci number.	6
IV	Array Techniques: Array order reversal – Array counting or histogramming – Finding the maximum number in a set - Removal of duplicates from an ordered array - Partitioning an array – Finding the k^{th} smallest element – Longest monotone subsequence.	6
V	Text Processing and Pattern Searching: Text line length adjustment – Left and right justification of text – Keyword searching in text – Text line editing – Linear pattern search. Recursive algorithms: Towers of Hanoi – Permutation generation.	6
	Total	30

Course Outcomes		Programme Outcome
CO	On completion of this course, students will	
1	Understand the logic of problem and analyses implementation of algorithm and TopDown approach and concept of Recursion	PO1,PO6
2	Able to understand the Sequence of Numbers and Series Fibonacci, Reversing ,Base Conversion.	PO2
3	Able to do Algebraic operations	PO2,PO4
4	Coverage of Arrays and its Logics	PO6,PO8
5	Text Processing and Pattern Searching Approach	PO7

Course Objective											
C1	To understand the basic concepts of numbers										
C2	Understand and apply the concept of percentage, profit & loss										
C3	To study the basic concepts of time and work, interests										
C4	To learn the concepts of permutation, probability, discounts										
C5	To study about the concepts of data representation, graphs										
UNIT	Details							No. of Hours	Course Objective		
I	Numbers-HCF and LCM of numbers-Decimal fractions-Simplification-Squareroot and cuberoots - Average-problems on Numbers.							6	CO1		
II	Problems on Ages - Surds and Indices - percentage -							6	CO2		

	profits and loss - ratio and proportion-partnership-Chainrule.		
III	Time and work - pipes and cisterns - Time and Distance - problems on trains -Boats and streams - simple interest - compound interest - Logarithms - Area-Volume and surfacearea -races and Gamesofskill.	6	CO3
IV	Permutation and combination-probability-True Discount-Bankers Discount – Height and Distances-Oddmanout & Series.	6	CO4
V	Calendar - Clocks - stocks and shares - Data representation - Tabulation - BarGraphs-Piecharts-Linegraphs.	6	CO5
	Total	60	
Course Outcomes		Programme Outcome	
CO	On completion of this course, students will		
1	understand the concepts, application and the problems of numbers	PO1	
2	To have basic knowledge and understanding about percentage, profit & loss related processings	PO1, PO2	
3	To understand the concepts of time and work	PO4, PO6	
4	Speaks about the concepts of probability, discount	PO4, PO5, PO6	
5	Understanding the concept of problem solving involved in stocks & shares, graphs	PO3, PO8

	Advanced Excel	Specific Elective	Y	-	-	-	2	2	25	75	100
Course Objective											
C1	Handle large amounts of data										
C2	Aggregate numeric data and summarize into categories and subcategories										
C3	Filtering, sorting, and grouping data or subsets of data										
C4	Create pivot tables to consolidate data from multiple files										

C5	Presenting data in the form of charts and graphs		
UNIT	Details	No. of Hours	Course Objective
I	Basics of Excel- Customizing common options- Absolute and relative cells- Protecting and un-protecting worksheets and cells- Working with Functions - Writing conditional expressions - logical functions - lookup and reference functions- Vlookup with Exact Match, Approximate Match- Nested Vlookup with Exact Match- Vlookup with Tables, Dynamic Ranges- Nested Vlookup with Exact Match- Using VLookup to consolidate Data from Multiple Sheets	6	C1
II	Data Validations - Specifying a valid range of values - Specifying a list of valid values- Specifying custom validations based on formula - Working with Templates Designing the structure of a template- templates for standardization of worksheets - Sorting and Filtering Data -Sorting tables- multiple-level sorting- custom sorting- Filtering data for selected view - advanced filter options- Working with Reports Creating subtotals- Multiple-level subtotal.	6	C2
III	Creating Pivot tables Formatting and customizing Pivot tables- advanced options of Pivot tables- Pivot charts- Consolidating data from multiple sheets and files using Pivot tables- external data sources- data consolidation feature to consolidate data- Show Value As % of Row, % of Column, Running Total, Compare with Specific Field- Viewing Subtotal under Pivot- Creating Slicers.	6	C3
IV	More Functions Date and time functions- Text functions- Database functions- Power Functions - Formatting Using auto formatting option for worksheets- Using conditional formatting option for rows, columns and cells- WhatIf Analysis - Goal Seek- Data Tables- Scenario Manager.	6	C4
V	Charts - Formatting Charts- 3D Graphs- Bar and Line Chart together- Secondary Axis in Graphs- Sharing Charts with PowerPoint / MS Word, Dynamically- New Features Of Excel Sparklines, Inline Charts, data Charts- Overview of all the new features.	6	C5
	Total	30	
Course Outcomes		Programme Outcomes	
CO	On completion of this course, students will		
1	Work with big data tools and its analysis techniques.	PO1	

2	Analyze data by utilizing clustering and classification algorithms.	PO1, PO2
3	Learn and apply different mining algorithms and recommendation systems for large volumes of data.	PO4, PO6
4	Perform analytics on data streams.	PO4, PO5, PO6
5	Learn NoSQL databases and management.	PO3, PO8

	Biometrics	Specific Elective	Y	-	-	-	2	2	25	75	100
Course Objectives											
CO1	Identify the various biometric technologies.										
CO2	Design of biometric recognition.										
CO3	Develop simple applications for privacy										
CO4	Understand the need of biometric in the society										
CO5	Understand the scope of biometric techniques										
UNIT	Details							No. of Hours	Course Objectives		
I	Introduction: What is Biometrics, History, Types of biometric Traits, General architecture of biometric							6	CO1		

	systems, Basic working of biometric matching, Biometric system error and performance measures, Design of biometric system, Applications of biometrics, Biometrics versus traditional authentication methods. Face Biometrics: Introduction, Background of Face Recognition, Design of Face Recognition System, Neural Network for Face Recognition, Face Detection in Video Sequences, Challenges in Face Biometrics, .7 Face Recognition Methods, Advantages and Disadvantages.		
II	Retina and Iris Biometrics: Introduction, Performance of Biometrics, Design of Retina Biometrics, Design of Iris Recognition System, Iris Segmentation Method , Determination of Iris Region, Determination of Iris Region, Applications of Iris Biometrics, Advantages and Disadvantages Vein and Fingerprint Biometrics: Introduction, Biometrics Using Vein Pattern of Palm, Fingerprint Biometrics, Fingerprint Recognition System, Minutiae Extraction, Fingerprint Indexing, Experimental Results, Advantages and Disadvantages.	6	CO2
III	Privacy Enhancement Using Biometrics: Introduction, Privacy Concerns Associated with Biometric Deployments, Identity and Privacy, Privacy Concerns, Biometrics with Privacy Enhancement, Comparison of Various Biometrics in Terms of Privacy, Soft Biometrics. Multimodal Biometrics: Introduction to Multimodal Biometrics , Basic Architecture of Multimodal Biometrics, Multimodal Biometrics Using Face and Ear, Characteristics and Advantages of Multimodal Biometrics, Characteristics and Advantages of Multimodal Biometrics.	6	CO3
IV	Watermarking Techniques: Introduction, Data Hiding Methods, Basic Framework of Watermarking, Classification of Watermarking, Applications of Watermarking, Attacks on Watermarks, Performance Evaluation, Characteristics of Watermarks, General Watermarking Process, Image Watermarking Techniques, Watermarking Algorithm, Experimental Results, Effect of Attacks on Watermarking Techniques, Attacks on Spatial Domain Watermarking.	6	CO4
V	Scope and Future: Scope and Future Market of Biometrics, Biometric Technologies, Applications of Biometrics, Biometrics and Information Technology Infrastructure, Role of Biometrics in Enterprise	6	CO5

	Security, Role of Biometrics in Border Security, Smart Card Technology and Biometrics, Radio Frequency Identification (RFID) Biometrics, DNA Biometrics, Comparative Study of Various Biometric Techniques. Biometric Standards: Introduction, Standard Development Organizations, Application Programming Interface (API), Information Security and Biometric Standards, Biometric Template Interoperability.		
	Total	30	
Course Outcomes			
Course Outcomes	On completion of this course, students will;		
CO1	To understand the basic concepts and the functionality of the Biometrics, Face Biometrics, Types, Architecture and Applications.	PO1, PO3, PO6, PO8	
CO2	To know the concepts Retina and Iris Biometrics and Vein and Fingerprint Biometrics.	PO1,PO2,PO3,PO6	
CO3	To analyse the Privacy Enhancement and Multimodal Biometrics.	PO3, PO5	
CO4	To get analyticalidea on Watrmarking Techniques	PO1, PO2, PO3, PO7	
CO5	To Gain knowledge on Future scope of Biometrics,and Study of various Biometric Techniques.	PO2, PO6, PO7

	Cyber Forensics	Specific Elective	Y	-	-	-	2	2	25	75	100
Course Objective											
C1	Understand the definition of computer forensics fundamentals.										
C2	To study about the Types of Computer Forensics Evidence										
C3	Understand and apply the concepts of Duplication and Preservation of Digital Evidence										
C4	Understand the concepts of Electronic Evidence and Identification of Data										
C5	To study about the Digital Detective, Network Forensics Scenario, Damaging Computer Evidence.										
UNIT	Details								No. of Hours	Course Objective	
I	Overview of Computer Forensics Technology: Computer Forensics Fundamentals: What is Computer Forensics? Use of Computer Forensics in Law Enforcement, Computer Forensics Assistance to Human Resources/Employment Proceedings, Computer Forensics Services, Benefits of professional Forensics Methodology, Steps taken by Computer Forensics Specialists. Types of Computer. Forensics Technology: Types of Business Computer Forensic, Technology–Types of Military Computer Forensic Technology–Types of Law Enforcement–Computer Forensic. Technology–Types of Business Computer Forensic Technology.								6	C1	
II	Computer Forensics Evidence and capture: Data Recovery: Data Recovery Defined, Data Back–up and Recovery, The Role of Back –up in Data Recovery, The Data –Recovery Solution. Evidence Collection and Data Seizure: Collection Options, Obstacles, Types of Evidence, The Rules of Evidence, Volatile Evidence, General Procedure, Collection and Archiving, Methods of Collections, Artefacts, Collection Steps, Controlling Contamination: The chain of custody.								6	C2	
III	Duplication and Preservation of Digital Evidence: Processing steps, Legal Aspects of collecting and Preserving Computer forensic Evidence. Computer image Verification and Authentication: Special needs of Evidential Authentication, Practical Consideration, Practical Implementation.								6	C3	

IV	Computer Forensics Analysis: Discovery of Electronic Evidence: Electronic Document Discovery: A Powerful New Litigation Tool. Identification of Data: Time Travel, Forensic Identification and Analysis of Technical Surveillance Devices.	6	C4
V	Reconstructing Past Events: How to Become a Digital Detective, Useable File Formats, Unusable File Formats, Converting Files. Networks: Network Forensics Scenario, a technical approach, Destruction Of E–Mail, Damaging Computer Evidence, Documenting The Intrusion on Destruction of Data, System Testing.	6	C5

Course Objectives											
CO1	To understand the basic concepts, Evolution and Benefits of ERP.										
CO2	To know the need and Role of ERP in logical and Physical Integration.										
CO3	Identify the important business functions provided by typical business software such as enterprise resource planning and customer relationship managemen										
CO4	To train the students to develop the basic understanding of how ERP enriches the business organizations in achieving a multidimensional growth										

CO5	To aim at preparing the students technological competitive and make them ready to self-upgrade with the higher technical skills	
UNIT	Details	No. of Hours
I	ERP Introduction, Benefits, Origin, Evolution and Structure: Conceptual Model of ERP, the Evolution of ERP, the Structure of ERP, Components and needs of ERP, ERP Vendors; Benefits & Limitations of ERP Packages.	6
II	Need to focus on Enterprise Integration/ERP; Information mapping; Role of common shared Enterprise database; System Integration, Logical vs. Physical System Integration, Benefits & limitations of System Integration, ERP's Role in Logical and Physical Integration. Business Process Reengineering, Data ware Housing, Data Mining, Online Analytic Processing (OLAP), Product Life Cycle Man-agement (PLM), LAP, Supply chain Management.	6
III	ERP Marketplace and Marketplace Dynamics: Market Overview, Marketplace Dynamics, the Changing ERP Market. ERP- Functional Modules: Introduction, Functional Modules of ERP Software, Integration of ERP, Supply chain and Customer Relationship Applications. Cloud and Open Source, Management, Material Management, Financial Module, CRM and Case Study.	6
IV	ERP Implementation Basics, , ERP implementation Strategy, ERP Implementation Life Cycle ,Pre- Implementation task,Role of SDLC/SSAD, Object Oriented Architecture, Consultants, Vendors and Employees.	6
V	ERP & E-Commerce, Future Directives- in ERP, ERP and Internet, Critical success and failure factors, Integrating ERP into or-ganizational culture. Using ERP tool: either SAP or ORACLE format to case study.	6
	Total	30
Course Outcomes		
Course Outcomes	On completion of this course, students will;	
CO1	Understand the basic concepts of ERP.	
CO2	Identify different technologies used in ERP	
CO3	Understand and apply the concepts of ERP Manufacturing Perspective and ERP Modules	
CO4	Discuss the benefits of ERP	
CO5	Apply different tools used in ERP

	Organizational Behaviour	Specific Elective	Y	-	-	-	2	2	25	75	100
Learning Objectives											
LO1	To have extensive knowledge on OB and the scope of OB.										
LO2	To create awareness of Individual Behaviour.										
LO3	To enhance the understanding of Group Behaviour										
LO4	To know the basics of Organisational Culture and Organisational Structure										
LO5	To understand Organisational Change, Conflict and Power										
UNIT	Details									No. of Hours	
I	INTRODUCTION : Concept of Organizational Behavior (OB): Nature, Scope and Role of OB: Disciplines that contribute to OB; Opportunities for OB (Globalization, Indian workforce diversity, customer service, innovation and change, networked organizations, work-life balance, people skills, positive work environment, ethics)									6	
II	INDIVIDUAL BEHAVIOUR: 1. Learning, attitude and Job satisfaction: Concept of learning, conditioning, shaping and reinforcement. Concept of attitude, components, behavior and attitude. Job satisfaction: causation; impact of satisfied employees on workplace. 2. Motivation : Concept; Theories (Hierarchy of needs, X and Y, Two factor, McClelland, Goal setting, Self-efficacy, Equity theory); Job characteristics model; Redesigning jobs, 3. Personality and Values : Concept of personality; Myers-Briggs Type Indicator (MBTI); Big Five model. Relevance of values; Linking personality and values to the workplace (person-job fit, person-organization fit) 4. Perception, Decision Making : Perception and Judgements; Factors; Linking perception to individual decision making:									6	
III	GROUP BEHAVIOUR : 1. Groups and Work Teams : Concept : Five Stage model of group development; Group norms, cohesiveness ; Group think and shift ; Teams; types of teams; Creating team players from individuals and team based work(TBW) 2. Leadership : Concept; Trait theories; Behavioral theories (Ohio and Michigan studies); Contingency theories (Fiedler, Hersey and Blanchard, Path-Goal);									6	
IV	ORGANISATIONAL CULTURE AND STRUCTURE : Concept of culture; Impact (functions and liability); Creating and sustaining culture: Concept of structure, Prevalent organizational									6	

	designs: New design options	
V	ORGANISATIONAL CHANGE, CONFLICT AND POWER: Forces of change; Planned change; Resistance; Approaches (Lewin's model, Organisational development);. Concept of conflict, Conflict process; Types, Functional/ Dysfunctional. Introduction to power and politics.	6
		30
Course Outcomes	On Completion of the course the students will	
CO1	To define OrganisationalBehaviour, Understand the opportunity through OB.	
CO2	To apply self-awareness, motivation, leadership and learning theories at workplace.	
CO3	To analyze the complexities and solutions of group behaviour.	
CO4	To impact and bring positive change in the culture of the organisaiton.	
CO5	To create a congenial climate in the organization.
